BY

STEVEN J. FRIESEN

E.J. BRILL
LEIDEN • NEW YORK • KÖLN
1993

The series Religions in the Graeco-Roman World presents a forum for studies in the social and cultural function of religions in the Greek and the Roman world, dealing with pagan religions both in their own right and in their interaction with and influence on Christianity and Judaism during a lengthy period of fundamental change. Special attention will be given to the religious history of regions and cities which illustrate the practical workings of these processes.

Enquiries regarding the submission of works for publication in the series may be directed to Professor H.J.W. Drijvers, Faculty of Letters, University of Groningen, 9712 EK Groningen, The Netherlands.

The paper in this book meets the guidelines for permanence and durability of the Committee on Production Guidelines for Book Longevity of the Council on Library Resources.

ACKNOWLEDGMENTS

The development of this study from its inception as a proposal for a doctoral dissertation to its appearance in the form of a book was assisted by many people. I am indebted to those who read chapters of the manuscript and offered valuable advice. These include Bernadette Brooten, Sterling Dow, Rosalinde Kearsley, John Lanci, Greg Riley, Christine M. Thomas, and Roy Ward. My advisors Helmut Koester and David Mitten saw all the chapters through many drafts, and their guidance is evident throughout. Finally, David Orton and Thea Tilanus skillfully took the results of these labors through the editorial process at Brill. I would also like to thank Ann Brock for her help in locating secondary materials and Barry Barnes for initiation into the realm of graphics software. And, of course, I must recognize the contribution of my family—Janice, David and Daniel—who endured and aided these efforts with love and understanding.

INTRODUCTION

This study is an examination of one particular cult: Asia's provincial cult of the emperors, established during the late first century of the Common Era in the city of Ephesus. This cult has been mentioned often in a wide variety of scholarly and popular works, but the cult itself is not well understood. There has been no consensus about the date when the cult was established nor about the emperors to whom it was dedicated. After an examination of earlier provincial cults in Asia, an argument will be presented for a specific date and dedication of the cult.

The goal of this study, however, is to move beyond the analysis of date and emperor in order to examine more closely the religious symbolism associated with the cult. The inscriptions, coins, sculpture, architecture, and occasional literary text, once gathered and ordered, reveal a great deal about the religious traditions and values which this institution embodied.

The final chapter includes several conclusions about the significance of the Cult of the Sebastoi for the lives of the inhabitants of the Roman province of Asia. A great deal of diversity can be found in any human society, and this fact must be born in mind in the interpretation of this cult. The actions of some individuals from various strata of Asian society are examined. This is followed by a concluding statement that deals with the role of Domitian in this cult.

Mercifully, for reader and author alike, there is little history of research on this cult. Several of its aspects—dating, dedication, architecture, and the like—have been addressed in various studies devoted to other topics, but no monograph on this topic has been produced up to this time. The articles and notes of scholars that are related to this study will be duly noted in the chapters to which they are relevant. No rehearsal of these works is necessary at this point.

More urgent is the task of providing some definitions and explanations for some of the vocabulary that will be used. Above all, a few words are in order about the word "cult."¹ I have tried to avoid the

¹ The modern pejorative connotations associated with the term "cult" should not be imported into the word's usage in this study.

abstract noun "religion" in this study because it so often connotes a system of beliefs or an impersonal pattern of ritual actions.² Instead, I have chosen to write of "cults," i.e., specific institutions devoted to sacrificial activities. Occasionally, "cult" will be used to indicate a collection of such local phenomena, but this broader category will not be the focus of the discussion. The related adjective "cultic" is used to describe events, institutions, officials, actions, etc. which have to do with sacrificial activity. "Religious" also occurs at times in this study as a rough equivalent of "cultic." It does not necessarily imply emotional involvement or dogmatic content, though these may be involved; it refers primarily to phenomena which are implicated in the imaging and promotion of proper relationships through sacrificial activity.

Most modern studies of provincial imperial cults use the term "neokoros" for such cults. In chapter three it will be demonstrated that this term is only appropriate in reference to a province's imperial cult beginning in the late first century CE. Before that date, it is anachronistic to call such a cult neokoros and so we will refer to them as "provincial" (i.e., related to a province) rather than neokoros. "Neokoros" turns up quite often, nevertheless, and I have chosen to Anglicize it rather than to italicize every occurrence. When there is a particular reason, "neokoros" is rendered in Greek. Its English adjective is "neokorate."

There are other Greek words which occur often enough to be freed from their italicized existence. One such word is "koinon," an adjective meaning "common" that came to be one of the terms for the provincial council of Asia. It appears in this study as the English name of the provincial council.

Another difficult word is the English rendering of Σεβαστός. Its normal English translation is "Augustus," but this is not appropriate in one crucial context: the official designation of the temple whose cult is under examination. I have chosen to refer to the cult as the "Cult of the Sebastoi" rather than "of the Augusti" because "Augusti," a transliteration from Latin, would detract from the fact that this is a thoroughly Greek institution. "Cult of the Emperors" would also have been a possible title, but it would have been less

² For an interesting, though not always convincing, discussion of "religion" in modern usage, see Wilfred Cantwell Smith, *The Meaning and End of Religion* (New York: Harper & Row, 1962) 15-50.

exact and would have caused confusion with the word normally translated as “emperor” (αὐτοκράτωρ). Furthermore, “emperor” does not retain the reverent quality of “sebastos.” It would have been impractical to translate every example of σεβαστός as “sebastos,” though, as this would have required the renaming of the Augustus who is credited with founding the Roman Empire. In general, I have used “sebastos” (without italics) except when pragmatic considerations overcame my obsession with consistent usage.

The geographic focus of this study is the Roman province of Asia, that included the western section of Asia Minor and the nearby Aegean islands. The area came under the control of the Romans after it was willed to them by Attalos III of Pergamum in 133 BCE and after they put down the resistance led by Aristonikos. Asia finally became a province in 126 BCE but was reorganized by Octavian in 29 BCE. In the north the province extended to the Propontis and Bithynia; its eastern flank was bordered by Galatia (also a Roman province after 25 BCE), and its southeast border was shared with Lycia. In the Imperial period, Phrygia was included in the province. These are the boundaries referred to in this study by the terms “province of Asia” and “Asia.”

Discussions of methodology will be found at various places in the study as the need arises. A somewhat longer statement dealing with broader issues of interpretation can be found at the beginning of the last chapter. At this point a few statements should be made about my conceptual model of society and the methods I use in the analysis of social phenomena.

One assumption that I hold is that societies are always in transition. At any given time a group may reconfirm or reshape its received traditions. The forces involved in such developments can be thought of in three general categories: social organization, ideology, and individuals. Social organization encompasses the constituent subgroups within the larger society, as well as the patterns of interaction between subgroups or persons. Ideology articulates the values which a society’s form of social organization is thought to embody. Individuals are the sometimes predictable actors who shape, and are shaped by, their social relationships and ideology. Each of these three categories affects the others, but none is simply a dependent expression of another. Each must be reckoned an active player in the negotiations involving new situations and inherited solutions.

This view of society is integrative and is particularly helpful in analyzing social groups that are not suffering severe disruption. The model, however, also presupposes the continual waxing and waning of tension within a given society and within its subgroups. No social organization completely matches its attendant ideology, no ideology ever satisfies fully the individuals who make up a social group, and no individual incorporates his or her social setting in the same fashion. These discrepancies result in conflicts and shortages that are felt to a greater or lesser degree by various individuals or subgroups. Changes and rationalizations are thus attempted or implemented at various levels of society with varying degrees of success. Occasionally the dissonance becomes so great that a breakdown occurs in the society's ability to function.

What I find interesting is the way in which problems are denied or redressed in the ongoing life of a social group by means of religious institutions and rhetoric. Religious institutions are often involved in social developments, sometimes conserving and sometimes challenging the status quo of the time. This is especially true of certain types of religious institutions, and in the Roman Empire, provincial imperial cult was the type of religious phenomenon which was most overt in its involvement with the issues of supralocal organization and ideology.

It is important to note that all three categories—social organization, ideology, and individual—are modern constructs for the analysis of a complex society. The accurate description of ancient society through the use of such constructs is a goal which can never be accomplished fully, for the process of studying the past seems to me to be dialogical. The modern analyst brings questions and methods to bear on the data that remain from antiquity. These data can be construed and misconstrued in many ways, for our intentions and abilities always influence our perception of the evidence. My experience, however, leads me to the conclusion that the ancient data can also affect modern analysis, and change the way we understand the past. Words, coins, sculptures, buildings, inscriptions, and even erasures all were created to communicate. Our task is to learn to understand those communications as best we can, and to evaluate critically our ability to understand them.

This process of dialogue with the past is made more difficult in this sort of study by the fact that much of the information from antiquity comes from one particular segment of the population. Our

ancient informants tend to be wealthy, educated, and male. We hear from others as well, but the bias of the data in favor of the interests of the elite must be continually evaluated.³

Because of these biases, both ancient and modern, I have adopted a method that gives primacy to detailed description of particular pieces of ancient evidence. The attempt to give as full and accurate a description as possible of selected data does not produce "objective" results; rather, it forces me to place my biases next to those of the ancients in the hope that they will illuminate each other and illustrate each other's shortcomings.

Another feature of my method is the deliberate attempt to describe any piece of evidence in its local context. At several points in my research I have encountered vague or mistaken scholarly interpretations that were due not to a lack of evidence but rather to improper context. All too often, evidence from distant locations or from other historical periods has been employed to explain the data from late first century CE Asia. Whenever possible, I have tried to interpret the Ephesian or Asian evidence locally before using other data. Outside data is informative and necessary for comparison and contrast, but it must be treated as a distinct category of evidence.

By employing this approach, I have become convinced that the existing data will yield much more information than we have yet won from it if the evidence is subjected to close scrutiny by a variety of interpreters, all with their own concerns. I hope that this study adds in its own way to that process.

The resonance of some of the themes in the preceding paragraphs with the work of anthropologist Clifford Geertz is due to his influence on my thinking about social analysis.⁴ Less apparent in

³ In this study, the general term "elite" refers to the wealthy, influential segment of society. I have avoided the term "class" in referring to this and other social subgroups because such terminology is more accurately applied to groups involved in a capitalist economy; see Keith Hopkins, "Introduction," in Peter Garnsey, Keith Hopkins, and C. R. Whittaker, eds., *Trade in the Ancient Economy* (Berkeley and Los Angeles: University of California Press, 1983) esp. xiii-xiv. "Aristocracy" could have been used also, but I prefer "elite" because it is not so closely associated with modern European nobility.

⁴ See especially, "Thick Description: Toward an Interpretive Theory of Culture," "Religion as a Cultural System," and "Ritual and Social Change: A Javanese Example," in Clifford Geertz, *The Interpretation of Cultures* (New York: Basic Books, 1973) 3-30, 87-125, 142-69. A helpful critique of Geertz's proposals regarding the definitions of religion and culture can be found in Talal Asad, "Anthropological Conceptions of Religion: Reflections on Geertz," *Man* 18 (1983) 237-59.

these paragraphs, but more apparent in the chapters that follow, are the influences of three other individuals. Historian of religion Helmut Koester has taught me many things, including the necessity of searching out the distinctive features and signs of change in ancient religious phenomena. Archaeologist David Mitten has demonstrated to me, in the personal and the academic realms, the humane task of the archaeologist: the recovery of human voices that were nearly lost from the record of our species' search for meaning. Finally, from author Dorothy L. Sayers I have learned the value of the "clue," the piece of evidence that does not fit into an inaccurate scenario. There are many mysteries left to us by antiquity, and it seems to me that a methodology that crosses disciplinary boundaries holds the most promise for understanding at least some of them.

CHAPTER ONE

EARLY PROVINCIAL CULTS IN ASIA

The purpose of this chapter is to survey the three provincial cults of Asia that were established before the cult in Ephesus. The various institutions related to the cults and the historical circumstances of the inaugurations of the cults will be examined as a way of developing an understanding of provincial worship in Asia. Following this, comparative material will be introduced from the growing number of provincial cults outside of Asia. In this way it will be possible to place the cult in Ephesus into the historical context of provincial imperial cults in Asia and throughout the empire.

Pergamum

In 32 BCE Mark Antony controlled the eastern Mediterranean. He and Cleopatra VII spent that winter in Ephesus where Antony had been received earlier as the New Dionysos, perhaps as early as 41 BCE.¹ A group of senators who had opposed Octavian met them in Ephesus and the city became a temporary center of resistance to Octavian.

In the naval battle off the coast of Actium in 31 BCE, Octavian defeated Mark Antony. Antony's flight and suicide in the following year left the province of Asia in a difficult position. Now that the former ruler had been eliminated, how would Asia greet his successor?

The province lost no time in declaring its allegiance to the man who was consolidating his control over the entire Mediterranean world. In the winter of 29 BCE, the koinon of Asia² requested permission to establish a cult in Pergamum for Octavian.³

¹ Plutarch, *Ant.* 24.4; also 60.3-5 (Athens). Regarding divine honors for Cleopatra, see *Ant.* 26.5; 54.9.

² The koinon was the provincial council of the cities of Asia.

³ Dio Cassius 51.20.6. Tacitus (*An.* 4.37) agrees with Dio that the initiative for establishing the cult was taken by the province. The emperor did not stop them (*divus Augustus . . . non prohibuisset*) from building a temple for him and for Rome. Bithynia also requested and received such a cult at the same time, which was located in Nikomedia.

Given the political events of the time, a new cult for Octavian in an eastern province in the year 29 BCE was a particularly sensitive issue. Octavian had used religious propaganda quite effectively against Antony, whom he had accused of accepting the divine status accorded to an eastern monarch. It was by no means certain that Octavian would allow such a cult, and if he did, what particular form it might take.

While the cult was established before Octavian took the name Augustus in 27 BCE, all extant evidence comes from after that date. Thus, we do not know what the original title of the temple was, but numerous inscriptions and coins indicate that Asia's cult came to be known as one dedicated to Rome and Augustus, and Tacitus confirms this identification.⁴ It is not clear whether the koinon requested that Rome be included in the cult, or whether Octavian insisted upon it.⁵ Whatever the individual roles of the various parties might have been, it is sufficient for our purposes to recognize what kinds of cultic models were being used in order to construct this new cult of the emperor.

Deininger argued for direct continuity between the cult of Rome and Augustus and the cults that the koinon offered to Hellenistic monarchs such as Antiochos I Soter. Deininger's interest in this was to show that the function of the koinon of Asia changed little from the Hellenistic to the Roman periods.⁶ If we examine the format of the two cults rather than the function of the koinon, it becomes clear that there are important distinctions between the cult for Antiochos and that for Rome and Augustus.

⁴ *An.* 4.37.

⁵ Most modern interpreters of the provincial cult in Pergamum theorize that Asia requested only a cult of the emperor but that Octavian required the inclusion of Rome. The basis for this opinion is Suetonius's characterization (*Aug.* 52) of Augustus as refusing all cults for himself if Rome was not also worshipped. While it is true that Asia showed much less interest in the figure of Rome than that of Augustus, the passage from Suetonius may or may not be accurate. The Pergamene cult was the first precedent for an Augustan policy on worship of the living emperor. It may even have been the point at which that policy was determined, but that still leaves open the question of who suggested the inclusion of Rome. It is possible that the Asians promoted the inclusion of the goddess Rome, for the provincial elite was not unaware of the various sentiments in the city of Rome regarding the worship of rulers (see Glen Bowersock, *Augustus and the Greek World* [Oxford: Clarendon Press, 1965] 115). Furthermore, a close reading of Tiberius's speech, as rendered by Tacitus (*An.* 4.37), implies that the province and not the emperor included Rome in the cult, for Augustus is said to have allowed both.

⁶ Jürgen Deininger, *Die Provinziallandtage der römischen Kaiserzeit von Augustus bis zum Ende des dritten Jahrhunderts n. Chr.* (Munich: Beck, 1965) 10, 17.

According to an inscription found in Klazomenai, the cult for Antiochos I was decreed by the koinon between 268 and 262 BCE.⁷ Sacrifices were offered to all the gods and goddesses, to Antiochos I, his wife Stratonike, and their son Antiochos II (l. 32-34). A temenos was to be built at the site of Antiochos's choosing (l. 20-24), but the place in the inscription that would have designated precisely to whom the precincts were dedicated is damaged and cannot be restored with certainty (l. 23). The one reference to a temple building is also a restoration (l. 29), but there is a secure reference to an "altar of the kings" in the temenos (l. 42-43). Thus, the cult included the royal family of the Seleucid dynasty.

The cult for Rome and Augustus, however, was not for a dynasty; it centered on one political leader and the city of Rome. This was not a new pattern; it had been used in a related situation less than twenty years earlier. Publius Servilius Isauricus had been consul with Julius Caesar in 48 BCE and two years later served as proconsul of Asia. His proconsulship lasted two years (46-44 BCE) during which time he became known as a benefactor and protector of the traditions of the cities in the province.⁸ Isauricus gave statues and was honored by statues in several places in the province, but was known especially for restoring the right of asylum to several sanctuaries.⁹ After Caesar's death, Isauricus sided with Octavian. Octavian married his daughter Servilia but the marriage did not last long. Octavian was able to assuage his former father-in-law by having Isauricus appointed consul again in 41 BCE, and he remained loyal to Octavian in the ensuing years.¹⁰

In gratitude for the actions of Isauricus on behalf of the province, a cult was established for this prominent Caesarean that is known to us through two inscriptions from Ephesus that refer to priests of Rome and Isauricus.¹¹ The exact nature of the cult is not attested,

⁷ *OGIS* 222. For a brief discussion of this inscription and the cult, see Christian Habicht, *Gottmenschen und griechische Städte* (Zetemata 14; Munich: Beck, 1956) 91-93.

⁸ *IGR* 4.433 (Pergamum) calls him σωτήρα καὶ εὐεργέτην τῆς πόλεως καὶ ἀποδεδωκότα τῇ πόλει τοὺς πατρίους νόμους καὶ τὴν δημοκρατίαν ἀκούων, "saviour and benefactor of the city, and the one who has given back to the city the ancestral customs and unenslaved democracy."

⁹ The inscriptions which mention Isauricus are conveniently gathered together by Jeanne and Louis Robert in "III. Hierocesaree," *Hellenica* 6 (1948) 38-42, where the identity of P. Servilius Isauricus is discussed, and where a summary of his activities in Asia can also be found.

¹⁰ *Kl. P.* 5.143 #30; *OCD* s.v. "Servilius (2)."

¹¹ *IvE* 7,1.3066 l. 6-7: ἱερέα Ῥώμης καὶ Ποπλίου Σερουειλίου Ἰσαυρικοῦ. See

but the connections of the two priests in these inscriptions with gymnasia suggest that the cult of Rome and Isauricus was located in such an institution rather than in a temple.

Asia's first provincial imperial cult in Pergamum drew upon this pattern of combining the cult of a prominent Roman with that of the city of Rome, and so used an accepted format from the late Republican period. As such, Asia's cult for Rome and Augustus signalled a desire to follow approved institutions of the Republic rather than the eastern models used by Antony. The cult of Rome and Augustus was on a grander scale than any cult for a proconsul,¹² but the very name of the cult indicated that it was organized in a manner consistent with accepted norms.¹³

Dio Cassius recorded an unusual complementary component to the cults in Asia and Bithynia for Augustus and Rome: a cult for Rome and Divus Julius was also established in both provinces.¹⁴ The cults for Rome and Julius had not been requested by the provinces; Octavian ordered that they be set up, one in Ephesus and one in Nicaea.¹⁵ The two parallel types of cults (i.e., Rome-Augustus, Rome-Julius) were designed for two kinds of worshippers. The cult requested by the provinces was to be for local inhabitants, or "foreigners" as Dio Cassius called them.¹⁶ The cult involving Julius was specifically for Romans living in the provinces.¹⁷

Octavian apparently decided that the inclusion of Rome in his cult was not a strong enough statement of fidelity to Roman religious practice.¹⁸ Thus, another cult was established that clearly dis-

also *IuE* 3.702. The latter inscription comes from the mid-first century CE while the former is dated to about 100 CE, so the cult continued for more than a century.

¹² The koinon initiated a pentaeteric festival for the proconsul Q. Mucius Scaevola in the early first century BCE; *AvP* 8,2.268 (= *OGIS* 437) and commentary. There were also games at Mylasa for C. Marcius Censorinus, another early first century BCE proconsul; *CIG* 2698b.

¹³ Habicht's argument (*AvP* 8,3, p. 165) that a cult of Rome and Salus became a cult of Rome and Augustus might be correct, but the inscription he cites does not refer to the provincial cult of Rome and Augustus. The priesthood in the inscription was hereditary, and the term θεός was used of Augustus. Neither of these would be unusual in a municipal cult of Rome and Augustus, but they would hardly be appropriate for Asia's provincial cult.

¹⁴ Dio 51.20.6-7.

¹⁵ Dio wrote that Augustus allowed (ἐπέτρεψε) his own cult with Rome, but required (προσέταξε) that of Rome and Julius.

¹⁶ . . . τοῖς δὲ δὴ ξένοις, "Ἕλληνας σφας ἐπικαλέσας. . .

¹⁷ . . . τοῖς Ῥωμαίοις τοῖς παρ' αὐτοῖς ἐποικοῦσι. . .

¹⁸ For a discussion of Greek and Roman systems of thought about the veneration of deities, see S. R. F. Price, "Gods and Emperors: The Greek Language of the Roman Imperial Cult," *JHS* 104 (1984) 79-95.

tinguished between religious practice appropriate for Greeks and that appropriate for Romans in regard to the worship of political figures.¹⁹ In this way, Octavian recognized the existence of two distinct religious systems and signaled his intent to preserve both of them within their appropriate spheres, rather than to legitimize one at the expense of the other.²⁰ When confronted with the choice between Roman traditions of ruler cult and acceptable eastern traditions, he recognized both as proper for their respective peoples.

The cult for Rome and Divus Julius never became significant for the religious life of the province of Asia. It is not mentioned in any surviving inscriptions nor on any coins.²¹ This is not surprising, for the cult was not the responsibility of the *koinon* nor was it designated for the use of the majority of the residents. Furthermore, the reasons for the establishment of this sort of cult were tied directly to the political and religious situation of the years just after Actium. There was no reason to replicate the cult in later imperial cult institutions, whether local or provincial.

The site of the temple for Rome and Augustus in Pergamum has never been located nor have any architectural pieces been found.²²

¹⁹ At this same time, Octavian was consciously redefining proper Roman practice in Rome as well. Upon returning to Rome from Samos in 29 BCE, he celebrated a triple triumph and participated in the dedication of the completed temple of Divus Julius that dominated the Forum Romanum. It may have been his intention to extend this development from Rome to the provinces. See Heidi Hänlein-Schäfer, *VENERATIO AUGUSTI: Eine Studie zu den Tempeln der ersten römischen Kaisers* (Archaeologica 39; Rome: Giorgio Bretschneider, 1985) 99-102.

²⁰ The way that the figure of Rome was understood also shows that two differing religious systems were involved. According to the Greek inscriptions of Asia, the cult was for the goddess Rome (Θεὰ Ῥώμη). Latin writers like Tacitus, however, viewed the cult as one for the city of Rome (*An.* 4.37.3; *urbi Romae templum*). A Latin inscription from Pergamum suggests the same distinction when it refers to games *in honorem Romae* (*AvP* 8,2.269 l. 12; Trajanic period).

²¹ Foundations of a double cella temple have been found in Ephesus which are probably to be identified as those of the temple for Rome and Julius (Fig. 1). The building techniques and architectural details are those of the late first century BCE; the building occupied a strategic location in an administrative area next to the *prytaneion* (an institution for the regulation of the city's official religious life); and, the podium temple that is backed up near the wall of a small *peribolos* courtyard is the first known example of this typical Italian temple design in Asia. Wilhelm Alzinger, "Das Regierungsviertel," *ÖJh* 50 (1972-75) Beib. 249-53; and Anton Bammer, *ÖJh* 51 (1976-77) Haupt. 57-58. Hänlein-Schäfer 1985, 264-65.

²² A copy of a decree of the city of Mytilene found on the island of Lesbos shows that the temple was not finished before 27 BCE, for the inscription uses the name "Augustus" when referring to the temple that was under construction for him in Pergamum (note the present participle in line A 12: [ἐν τῷ ναῷ τῷ κατασκευαζομένῳ αὐτῷ ὑπὸ τῆς Ἀσίας ἐν Περγάμῳ]). The decree is discussed in Conrad Cichorius, *Rom und Mytilene* (Leipzig: Teubner, 1888) 30-41. The text of the decree can also be found in *IGR* 4.39; *IG* 12,2.58; and *OGIS* 456.

Fig. 1. Plan of double cella temple at Ephesus.
(after Bammer, *ÖJh* 51 [1976–77] H. 58).

This lack of evidence for the building is alleviated somewhat by the depiction of the temple on several different coins. One particular group of Augustan cistophori, issued in Asia between June, 20 BCE, and June, 18 BCE, are particularly valuable in this regard.²³ The obverse design of these cistophori is constant: a bareheaded bust of Augustus facing right with a linear border and official titula-
ture (Pl. I).²⁴ This obverse appeared with three different reverses:

Plate I. One of the Augustan cistophori showing the Temple of Augustus and Rome, Pergamum. *BMCRE* 1.114 #705. Courtesy of the Trustees of the British Museum.

²³ C. H. V. Sutherland, *The Cistophori of Augustus* (London: Royal Numismatic Society, 1970) 36, 103.

²⁴ Sutherland 1970, pl. 12-14.

a triumphal arch, a round temple of Mars, and a hexastyle temple.²⁵

The temple with six Corinthian columns in front is a representation of the first provincial temple in Pergamum: on its architrave is written *ROM.ET.AUGUST*, and the words *COM(mune) ASIAE* are found in the open fields on either side of the temple. The building, viewed frontally, rests on five monumental steps. Palmette acroteria are visible on the top and on the corners of the pediment.²⁶ While the coins give us no idea of the exact size of the temple nor of the cella arrangement, they do indicate that the basic design of the temple was Greek rather than Italian.²⁷

A second type of coin provides information about the temple statue of Asia's cult in Pergamum. Starting already in the lifetime of Augustus, some coins in Asia depicted the temple in Pergamum but omitted the two central columns in order to show a statue inside.²⁸ The obverse of a bronze coin of Pergamum from approximately 4-5 CE uses this convention to reveal a statue of Augustus in military garb with spear in right hand, standing in the provincial temple.²⁹ The same image reappears on the reverse of a Pergamene bronze from the later Tiberian period (29-35 CE).³⁰

²⁵ Sutherland 1970, pl. 31-36.

²⁶ The temple of Rome and Augustus in Nikomedia was similar to the temple in Pergamum but also had several distinctive features. The Bithynian temple was a Corinthian octastyle on a three-step crepidoma. The akroterion on the top was palmette, but those on the sides each included a Nike with battle trophy. Some figures are depicted in the tympanon reliefs but the nature of the temple's external sculpture is not known because the coins are not consistent in this respect. *BM Pontus* 105, #10-27, pl. 24; *BMCRE* 3.232-33, #1096-1100, pl. 75 (Nerva-Hadrian); Hänlein-Schäfer 1985, 70.

²⁷ Sutherland (1970, 36) noted that the arch and the Temple of Mars were both built in 20 BCE, just before the issuing of the coins with their likeness. Since these cistophori commemorate the completion of two building projects, it may be that the appearance of the Rome and Augustus temple on the coins indicates that it too was finished in the previous year (20 BCE). It is also possible, however, that the temple was finished a few years earlier without appearing on the cistophori until this series was issued, perhaps from a provincial mint in Pergamum.

²⁸ Behrendt Pick ("Die Neokorie-Tempel von Pergamon und der Asklepios des Phyromachos," in *Festschrift Walther Judeich zum 70. Geburtstage* [Weimar: Hermann Boehlaus, 1929] 30) discussed this temple in particular, and the way temples were sometimes modified on coins to depict the temple statue. It has sometimes been assumed that such coins did not show the statue but rather the emperor reigning at the time the coin was issued. See S. R. F. Price, *Rituals and Power: The Roman imperial cult in Asia Minor* (Cambridge: Cambridge University Press, 1984) 178 n. 37, for bibliography on both sides of the issue.

²⁹ *BM Mysia* 139, #242, pl. 28.

³⁰ *BM Mysia* 140, #256, pl. 28.

Plate II. Tetradrachma of Asia showing temple with the statue of Rome crowning the statue of Augustus (Claudian). *BMCRE* 1.196 #228. Courtesy of the Trustees of the British Museum.

Later coins show both Augustus and a personified Rome in this temple (Pl. II). To do so, two more columns were omitted leaving only the two outer columns to represent the front colonnade. The same statue of Augustus in military dress stands inside the temple. To the right stands a female figure in a long belted chiton who personifies Rome. She holds a cornucopia in her left hand; the right arm is extended and raised, with the hand holding a crown above the emperor's head.³¹ The image occurs again under Nerva, though the figure of the emperor is holding something in his left hand and may be clothed differently.³²

Thus, the temple statues for Asia's first provincial cult were well-known throughout the province and beyond.³³ The imagery of the statues focussed attention on Augustus. The cuirassed emperor was honored by the figure of Rome, and when only one statue was depicted on coinage, that of Augustus was the obvious choice. The emperor was memorialized as a military conqueror.

The text from Dio Cassius mentioned earlier³⁴ concludes with the note that Pergamum received the right to hold sacred games associated with the temple.³⁵ The name of these games is known

³¹ A silver cistophoric tetradrachma from Asia: *BMCRE* 1.196, #228, pl. 34 (Claudius). A silver tetradrachma from an unknown mint: *BMCRE* 2.94, #449, pl. 43 (Vespasian).

³² Silver tetradrachma: *BMCRE* 3.12, #79, pl. 3 (Nerva).

³³ The statue from the Rome and Augustus temple in Nikomedia is more difficult to reconstruct because there is no tradition of depicting the statue on coins. The only evidence is a group of coins that were minted during a relatively short period of time at a later date (ca. 128-138 CE). They are not completely consistent, but the same two figures (Augustus being crowned by Rome) seem to be indicated. See Hänlein-Schäfer 1985, 83 regarding the numismatic evidence.

³⁴ See above, p. 7.

³⁵ Dio 51.20.9.

through the many references to them in inscriptions of successful athletes and of agonothetes.³⁶ The games could be fully described as [Ῥ]ωμαῖα Σεβαστὰ τὰ τιθέμενα ὑπὸ τοῦ κοινοῦ τῆς Ἀσίας ἐν Περγάμῳ³⁷ or simply referred to as τὰ μέγαρα Σεβαστὰ Ῥ[ω]μαῖα.³⁸

To summarize, Asia's cult of Rome and Augustus was established at a time of political and religious transition. The cult reflected a desire to maintain continuity with religious practices of the Republican period while promoting allegiance to Augustus and his adoptive father Julius Caesar. Because of its particular historical setting in the early years of Augustus's reign, some of the cult's aspects were not replicated in later developments of Asia's provincial worship. For fifty years, however, the cult in Pergamum was Asia's only provincial cult, and decrees from the time of Hadrian show that it was flourishing in the second century CE.³⁹ Because of its longevity and because of Augustus's legacy, the cult set a precedent which had to be taken into account in later decisions regarding provincial imperial cult in Asia and throughout the empire.

Smyrna

The institution of a Tiberian cult in Smyrna was the result of a long series of events that constitute a significant chapter in the development of provincial imperial worship. This development can be examined because the cult is one of the few provincial cults whose origins are described in some detail in an extant literary text.

Tacitus recorded that charges were brought against two Roman officials by the province of Asia during the reign of Tiberius. In 22 CE, the province's best lawyers accused their former proconsul Gaius Silanus, a man with many enemies in the Roman aristocracy as well, of extortion.⁴⁰ The trial was held before the Senate, but Tiberius made it clear by his involvement in the proceedings that he was seeking a guilty verdict. The prosecution was successful. Silanus was relegated to the island of Gyarus and part of his family's property was confiscated.

³⁶ These were benefactors who sponsored and sometimes organized competitions. *Kl.P.* 1.140-41.

³⁷ "The Romaia Sebasta established by the koinon of Asia in Pergamum." *IGR* 4.1064 = *SIG* 3.1065 (Kos, reign of Caligula).

³⁸ "The great Sebasta Romaia." *IGR* 4.498 (Pergamum).

³⁹ *AvP* 8,2.374 (= *IGR* 4.353).

⁴⁰ *An.* 3.66-9.

In 23 CE, the province of Asia also brought charges against Lucilius Capito, who had been the procurator in charge of imperial holdings in that province.⁴¹ He was accused of usurping the praetor's responsibilities and using military force against the provincials. Tiberius approved of the decision of the Senate to hear the case, and the prosecution was again successful.

In response to these two judicial decisions, the cities of Asia decreed a temple for Tiberius, Livia (his mother, the widow of Augustus), and the Senate.⁴² Permission to build it was forthcoming, but later on, Tiberius was faulted by some for not opposing the request for the temple.⁴³

Tacitus reported that the province of Hispania Ulterior presented a request in 25 CE for permission to build a similar temple in honor of Tiberius and Livia, without the inclusion of the Senate.⁴⁴ Tiberius used the occasion to defend himself against charges of self-glorification that arose from his approval of Asia's cult, and to lay out a policy for future provincial cults.

According to Tacitus, Tiberius explained in a speech to the Senate that he had granted the request of the cities of Asia because of the precedent set by Divus Augustus in allowing a cult to be founded in Pergamum. A further consideration which made the province's second request more palatable to the emperor was that the worship of Tiberius was linked to that of the Senate. The request of Hispania Ulterior, however, was to be rejected because a proliferation of such cults to Tiberius would be arrogant and would diminish the significance of the veneration of Augustus.⁴⁵

⁴¹ Tacitus *An.* 4.15.

⁴² Tacitus *An.* 4.15. P. A. Brunt pointed out that united fronts by an entire province such as that presented by the koinon of Asia under Tiberius were unusual, and not without risks. Repeated accusations by a particular koinon might produce a negative reaction against the province, and any accusation would inevitably create enemies among the defendant's supporters. If the defendant was acquitted and remained in a position of power, the province might be left especially vulnerable. "Charges of Provincial Maladministration under the Early Principate," *Historia* 10 (1961) 189-227, esp. 217, 220, 224-25.

⁴³ Tacitus *An.* 4.37. While the speech in this text was crafted by Tacitus, his claim to have had access to the speeches of Tiberius seems to have been accurate. Furthermore, the historian apparently took care not to misrepresent the content of the speeches. Ronald Martin, *Tacitus* (Berkeley and Los Angeles: University of California Press, 1981) 120, 133-34.

⁴⁴ Tacitus *An.* 4.37.

⁴⁵ Suetonius implied that Tiberius never allowed cultic honors for himself when the historian reported that the emperor prohibited temples, flamens, and priests to

Asia's provincial cult came to the Senate's attention again in 26 CE.⁴⁶ In the three years since the cult had been approved, no agreement had been reached as to which city would be given the privilege of providing the site for the temple. The Senate, with Tiberius in attendance, spent several days listening to representatives from eleven cities of the province of Asia. Each representative presented the arguments for the respective city's claim to be the most appropriate site for the temple, after which the Senate was to decide the matter.

The arguments in this case provide a unique record of the factors which were considered important in the choice of an appropriate site for an imperial temple.⁴⁷ Tacitus recorded that, in general, all eleven cities based their arguments on the antiquity of their people,⁴⁸ and on the support (*studium*) which they had offered the people of Rome in time of war. Along with these came arguments based on longstanding cultic honor for Rome (Smyrna) or for Augustus (Pergamum), and on wealth of natural resources (Sardis).⁴⁹

In the deliberations which ensued, several cities were eliminated

be decreed for him (*Tib.* 26). The text from Tacitus (*An.* 4.37) shows that Suetonius was correct in stating that Tiberius decided not to accept divine honors for himself from the provinces. Suetonius neglected to record, however, that this policy was formulated only after the cult of Tiberius, Livia, and the Senate had been approved. We cannot be certain about whether Suetonius was unaware of the cult in Smyrna, or whether he intentionally omitted reference to it in his writings. As a proponent of the traditional Roman view toward the glorification of the emperor (*Aug.* 52, 97; *Gaius* 22; *Dom.* 13), Suetonius may have suppressed the exceptional cult in Smyrna to make Tiberius's general policy more commendable. Moreover, Suetonius was probably aware of provincial cult procedures involving Asia for he was a prominent scholar in Rome who served in three secretarial posts under Trajan and Hadrian, the latter of whom made an unprecedented grant of three provincial cults to Asia (Kyzikos, Smyrna, Ephesus).

⁴⁶ Tacitus, *An.* 4.55-56

⁴⁷ Tacitus's account of these discussions is based on historical sources and is not his own creation. The conditions which are described in the arguments (e.g., the exclusive hold of Artemis on Ephesus) are those of the first half of the first century CE and not of Tacitus's own time.

⁴⁸ For example, Ilium claimed to be the parent of Rome through Troy. Sardis, on the other hand, recounted their mythic history in such a way as to show that Sardis and Rome traced their lineages back to Tyrrhenus and Lydus, the sons of Atys, which made the two peoples "brothers."

⁴⁹ Halikarnassos is reported to have received some consideration due to their claim to be free from earthquakes. While this is a rarity in Anatolia, the claim would have been especially impressive during the time of Tiberius. A severe earthquake struck the province in 17 CE and occasioned one of the few examples of major imperial largesse from Tiberius. Suet. *Tib.* 48.

from the competition because they were considered to be too insignificant to receive the honor of providing a home for the cult.⁵⁰ The argument of the Pergamenes that their cult for Augustus qualified them to host the new cult as well turned against them; the cult of Augustus was considered to be sufficient honor for the city and their claim was rejected. The requests of Ephesus and Miletus were refused because they already had renowned cults (of Artemis and of Apollo, respectively) which dominated the cities.

In the end, only Sardis and Smyrna were left as serious contenders. The representatives from Sardis emphasized their city's ancient, mythic ties with Rome, produced documentation of treaties and agreements, and praised their own rich rivers and land. Smyrna's advocates reviewed their own city's mythic past (in three variants!) but emphasized their early support for Rome both in battle⁵¹ and through cult.⁵² The senators voted and Smyrna was granted the right to build the temple. The Senate also decided to send a *legatus super numerum* to oversee construction.⁵³

From the writings of Tacitus it is clear that while this cult was sponsored by the whole province, it also was an occasion for intense competition between the cities of the province. While the motives of the cities are not made explicit, we can extrapolate that the presence of such a cult would enhance a city's development in many ways. It would enrich the cultic life of the city; it would increase the city's status in relation to other cities; it would create new offices for wealthy individuals to demonstrate their commitment to the city's well-being; it would bring these individuals and the city in closer contact with the Senate and the emperor; and, it would improve the city's economy through a building program partially funded by outside sources and through periodic festivals.

⁵⁰ Hypaipa, Tralles, Laodikeia, Magnesia on the Meander, Ilium, and Halikarnassos were disqualified for this reason.

⁵¹ Smyrna could boast of helping Rome with naval reinforcements both in her foreign wars (such as against Antiochos III, 191-88 BCE) and at home (Social Wars, 90-87 BCE). They also noted that they had sent supplies to Sulla at a crucial point in his campaigns.

⁵² Smyrna claimed to have built the first temple to Rome in Asia (ca. 195 BCE) at a time when Carthage was not yet vanquished and when there were still rival kings ruling large areas of Asia Minor.

⁵³ Valerius Naso was chosen by lot from among the ex-praetors for this position. The exact nature of his responsibilities is unknown since Tacitus, our only source on the matter, is not precise in his description (*qui templi curam susciperet*).

In developing their arguments, the cities were in some respects sailing on uncharted seas, for no province had previously received a second provincial cult and the factors that would determine the choice were not clear. Thus, Pergamum gambled on the presence of the first provincial cult in their city, and lost. The cities were not without guidelines, however, in presenting their cases. They could look to former negotiations of alliances with Rome and, more specifically, to earlier discussions in the provincial *koinon* about the site of the cult.

The record of Tacitus suggests that the presence of such a cult in a city at the time of Tiberius involved three conditions. The first was the wealth and status of the city where the cult was founded. No matter what other arguments might be presented, a relatively insignificant city without a distinguished heritage would not be considered as a possible site.

Second, a city had to have room in its cultic life for this major, new cult. Ephesus and Miletus were excluded from consideration because each city's religious ethos was already dominated by a cult of international renown. Pergamum also had at least one cult—that of Rome and Augustus—which would certainly have dominated the new one.⁵⁴

Third, the presence of a provincial cult in a city was supposed to commemorate an established relationship between two specific peoples: the *demos* of the city and the *populus Romanus*. The claims of mythic consanguinity, the references to old cults of Rome, and the records of military assistance all were used to demonstrate this point. It appears that in the final analysis, the factors of cultic and military fidelity decided the case among the more prestigious cities of Asia.

The ancient city of Smyrna is mostly covered by the modern city of Izmir and this has hampered excavations of the ancient remains. Thus, no architectural pieces from the provincial temple in Smyrna have been found. A bronze coin of Smyrna (Pl. III), issued while P. Petronius was proconsul of Asia (29-35 CE) remedies that problem to some extent by depicting the temple.⁵⁵ The obverse of

⁵⁴ This factor was to change significantly in the future. The cult of Artemis was no longer a hindrance for Ephesus in the late first century CE, and by the end of Hadrian's reign, three Asian cities had received a second provincial cult. The case of Miletus is discussed below (p. 21-30).

⁵⁵ *BM Ionia* 268, #266-68; pl. 28. Another bronze coin of Smyrna (*BM Ionia* 268, #263-65) might portray an altar associated with the temple.

Plate III. Bronze coin of Smyrna (29-35 CE). Obverse: Livia and Senate; reverse: Tiberius sacrificing in temple. *BM Ionia* 268 #267. Courtesy of the Trustees of the British Museum.

the coin bears two draped heads: that of Livia on the right and that of a youth (on the left) who symbolizes the Senate. Around them is the inscription Σεβαστή Σύνκλητος Ζμυρναίων Ἱερώνυμος “Hallowed Sebaste (and) Senate; (coin) of the Smyrnians.” The temple itself is shown on the reverse. There are four columns, probably Corinthian, with a statue of Tiberius in the center wearing a toga and with his head covered in priestly fashion. The inscription reads Σεβαστὸς Τιβέριος, ἐπὶ Πετρωνίου: “Sebastos Tiberius, when Petronius (was proconsul).”

This coin yields significant information about the cult established in Smyrna after the senatorial decision of 26 CE. First, it confirms the unusual combination of Tiberius, Livia, and the Senate recorded by Tacitus as the recipients of cultic honors. The coin, by depicting only Tiberius in the temple, confirms that he was the most important member of the triad. Second, the temple appears to have the same basic design, to the extent that this can be determined from coins, as that of Rome and Augustus in Pergamum.⁵⁶

Third, we note that the temple statue portrayed Tiberius not in the cuirass of a general, but in the robes of a priest. Such a portrayal does not necessarily remove Tiberius from the realm of the divine; gods were sometimes shown in priestly garb offering sacrifices.⁵⁷ In the context of imperial cult in Asia, however, it places Tiberius in a different role than that of the well-known image of the cuirassed Augustus. Whereas Augustus was the military conqueror who brought security to Asia and to the empire, Tiberius was portrayed as one who venerates, one who carries on a sacred tradition.

⁵⁶ The temple of Tiberius, though shown with four columns, was probably a hexastyle temple whose middle two columns were left out on the coin in order to show the temple statue.

⁵⁷ On this issue, See Price 1984b, 184-85 and notes.

An inscription from Sardis gives the standard phrase for referring to this temple while mentioning one of the offices created by the new cult: ἀρχιερεὺς τῆς Ἀσίας ναοῦ τοῦ ἐν Σμύρνῃ, "highpriest of Asia of the temple in Smyrna."⁵⁸ Other offices related to the cult and attested epigraphically include highpriestess,⁵⁹ hymnodes,⁶⁰ and neokoros.⁶¹

In the Smyrna cult, then, several similarities with the cult in Pergamum are apparent: the initiative of the province in requesting the cult; the necessity of including figures other than the emperor in the cult; and the use of Greek architectural designs in the construction of a temple. In addition, the nature of our sources about the cult in Smyrna make clear the ways in which the siting of a provincial cult occasioned intense competition between the cities of a province. Finally, we note that no separate cult for Romans, nor one dedicated to Divus Julius or to Augustus accompanied the provincial cult in Smyrna.

Miletus

Very little evidence for the third provincial cult of Asia has survived the centuries; we possess only two witnesses that refer to it. This relative lack of information is due to the fact that the cult, established in Miletus under Caligula, lasted no more than a few years. The two extant witnesses do, however, provide some valuable data on the organization of this provincial cult, and suggest that it included some unique aspects in comparison to its predecessors.

An inscription concerning the cult was found near the southwest corner of the temple of Apollo at Didyma. The inscription is on a statue base of marble and has been published most recently by Louis Robert.⁶² His edition of the text is printed below.

⁵⁸ *IGR* 4.1524. A discussion of the responsibilities of this office can be found in chapter four.

⁵⁹ *IvSm* 2,1.727. This inscription comes from the period when Smyrna had two provincial cults (ca. 123-214 CE).

⁶⁰ *IvSm* 2,1.594.

⁶¹ *IvSm* 2,1.594; 596; 639 l. 6-7.

⁶² Louis Robert, "Le cult de Caligula à Milet et la province d'Asie," *Hellenica* 7 (1949) 206-38. The statue base measures 0.95 m. high, ca. 0.75 m. wide, and ca. 0.75 m. deep. The letters are 0.02 m. high (p. 206 n. 3).

 21 οἱ φιλοσέβαστοι,
 γραφέντων τῶν ὀνομάτων κατὰ κλῆρον.

The neopoioi, the first ones to serve him in this capacity, dedicated (this statue of) Emperor Gaius Caesar Germanicus, son of Germanicus, God Sebastos, from their own funds, when Gaius Vergilius Capito was highpriest of the temple in Miletus of Gaius Caesar for the first time, but highpriest of Asia for the third time; and (when) Tiberius Julius Menogenes, son of Demetrios the nomothete, was highpriest the second time and neokoros of the temple in Miletus; and (when) Protomachos Julieus, son of Glykon, was leader of the neopoioi and sebastoneos and sebastologos, [Thirteen neopoioi are listed with the cities they represent], those devoted to Sebastos, the names being written (in order, chosen) by lot.

The base once supported a statue of the emperor Gaius, which dates the inscription to the years 37-41 CE. Several officials are named and reference is made to the temple. From the way in which the temple is mentioned, it is clear that this cult differed from the previous provincial cults in Asia in its glorification of the living emperor, for the temple was dedicated to a single emperor without including any other individual or collective (e.g., Rome, Livia, the Senate).⁶³

Furthermore, the word θεός is used in the name of Gaius. While θεός was used for the living emperor in various contexts, provincial cults tended to be more conservative in this than were the municipal or private imperial cults. This was due to the closer contact of provincial cults with Rome and its traditions. Local imperial cults were subject to local custom; provincial cults, on the other hand, needed to be cognizant of the traditions in Rome in order to secure the approval of the Senate and emperor.⁶⁴ For these reasons,

⁶³ Line 5.

⁶⁴ This difference in practice between provincial imperial cults and local

provincial cults in Asia usually reserved the designation of θεός for an officially divinized emperor, while local cults were less restrictive in their use of the label.⁶⁵

An equally significant aspect of the inscription, though, is the unprecedented glimpse it provides into the organization of the cult. As one would expect, highpriests are mentioned. One of these, Gaius Vergilius Capito,⁶⁶ was serving for the first time as highpriest of the temple in Miletus, and we are told that he had already served twice as highpriest for another provincial cult or cults. Another highpriest, Ti. Julius Menogenes, was also the neokoros of the provincial temple.⁶⁷ The third official, Protomachos son of Glykon, had three positions. He was the sebastoneos, the sebastologos, and the head of the group of neopoioi (l. 9-10).

Individuals who served as neopoioi normally were part of a commission whose responsibility it was to administer temple finances. In some cases, groups of neopoioi functioned as a building committee for a new temple, but the normal responsibilities for such a group in Asia in the Roman period was the maintenance of buildings and oversight of a temple's income.⁶⁸ The neopoioi in this inscription are given credit for setting up the statue of Gaius in the Didymeion precincts. They are also listed by name in lines 12-21, and we are told that they were the first ones to serve in this way. Since these are

imperial cults is demonstrated by Hänlein-Schäfer's systematic examination of temples to Augustus from his lifetime and throughout the empire in *VENERATIO AUGUSTI*, esp. p. 80.

⁶⁵ For example, during the lifetime of Augustus (specifically, 2 BCE–14 CE) an eponymous local official in Kyme is referred to in the phrase ἐπὶ ἱερέος τῆς Ῥώμας καὶ Αὐτοκράτορος Καίσαρος Θεῷ υἱῷ Θεῷ Σεβάστω "when (he was) priest of Rome and of Emperor Caesar Augustus, God, Son of God;" *IGR* 4.1302, l. 55-56. A provincial high priest, however, was ὁ ἀρχιερεὺς θεᾶς Ῥώμης καὶ Αὐτοκράτορος Καίσαρος θεοῦ υἱοῦ Σεβαστο[ῦ], "the highpriest of Goddess Rome and of Emperor Caesar Augustus, Son of God;" *IGR* 4.1756, l. 75-76 (Sardis, 4 BCE). In the Tiberian period, an official of the same provincial cult is called τὸν νεοκόρον θεᾶς Ῥώμης καὶ θεοῦ Σεβαστοῦ Καίσαρος, "neokoros of Goddess Rome and of God Augustus Caesar;" *IGR* 4.454 (Pergamum). Augustus was a θεός in local cults and in provincial cults after his death, but not in a provincial cult during his lifetime.

⁶⁶ Lines 4-6. At some time after the reign of Augustus, a cult was established for Capito in Miletus which is, according to Bowersock (*Augustus*, 120), the last known cult for a Roman official other than an emperor.

⁶⁷ The neokoros was an official whose responsibilities are discussed below in chapter three.

⁶⁸ Otto Schulthess, "Neopoioi," *PW* 16 (1935) 2433-39.

specifically denoted as the first group of *neopoioi*, they probably supervised the building of the temple to Gaius. The designation “first” implies that the office is to continue, though. The major responsibility of the office, therefore, was probably administration of the temple.

The list of names includes the city of Asia from which each *neopios* came. Robert’s study has shown that the cities listed on the inscription were not chosen arbitrarily.⁶⁹ The cities were chosen to represent their district (known as *conventus iuridi* or *διοίκησις*) within the province. All areas of the province were thus represented in the organization of the cult and responsible in part for its operation.⁷⁰

In the first half of the third century CE, Dio Cassius wrote about the provincial cult for Gaius in Miletus in a section of his *Roman History* which dealt with the events of 40 CE.

Gaius ordered that a sacred precinct should be set apart for his worship at Miletus in the province of Asia. The reason he gave for choosing this city was that Artemis had pre-empted Ephesus, Augustus Pergamum, and Tiberius Smyrna; but the truth of the matter was that he desired to appropriate to his own use the large and exceedingly beautiful temple which the Milesians were building to Apollo.⁷¹

Dio’s account must be read with caution for Gaius did not find a sympathetic audience among the Roman historians. It would appear from this passage, however, that the initiative for establishing this cult did not come from Asia, as was the case in the two earlier provincial cults, but rather from the emperor. This is not an improbable scenario, and it does accord with what is known about Gaius’s other actions in connection with religious institutions.⁷²

A second point of interest in Dio’s account is the issue of choosing a city for the cult. Gaius is reported to have chosen Miletus because the three major cities of the province already focussed their piety on other deities. This was the same argument used in 26 CE by the

⁶⁹ See esp. 226-38

⁷⁰ Competition within the province surfaces in this inscription in the last line that notes that the ordering of the names in the list was determined randomly; i.e., the order of the names does not reflect individual or municipal status.

⁷¹ Dio 59.28.1. Based on the translation by Earnest Cary in *Dio’s Roman History*, vol. 7 (Loeb Classical Library; Cambridge, Mass.: Harvard University Press, 1924).

⁷² See, for example, Suet. *Gaius* 22 and 52.

Senate in their decision to site the cult of Tiberius, Livia, and the Senate in Smyrna. Gaius's use of the argument is not convincing, though, since Miletus was also dominated by the ancient and respected cult of Didymeian Apollo.⁷³ Dio then goes on to say that Gaius's actual intention was to take over the precincts and temple of Apollo at Didyma.

Dio was probably not accurate when he linked the Didyma precincts to the provincial cult of Gaius. Provincial cults did not normally convert existing facilities for the use of the new cult. Rather, a new temple accompanied the new cult.⁷⁴ Moreover, an attempt by Gaius to replace Apollo in a famous eastern sanctuary like Didyma would probably have come to the attention of Suetonius and would have been noted by him.⁷⁵ Suetonius does mention that Gaius planned or tried to complete unfinished work on the Didymeion.⁷⁶ Dio probably has connected, or even confused, these two separate projects related to Miletus: a provincial cult for Gaius; and, Gaius's support for the continuing construction of the Apollo sanctuary.⁷⁷

With the death of Gaius, the provincial cult in Miletus disappears from the archaeological record. No temple has been identified for the cult,⁷⁸ and no other inscriptions mention either officials or fes-

⁷³ In the deliberations of 26 CE, the argument may have been in part a matter of convenience as well. The need to decrease the number of cities under consideration may have caused the argument about other major cults to have taken on exaggerated significance.

⁷⁴ Two exceptions to this general rule may have occurred, both of which come from a later period when provincial cults were much more easily acquired. In the middle of the second century CE, Sardis may have used its Artemis temple for a provincial cult involving Antoninus Pius and Faustina (Price 1984b, 260). It has also been argued that Smyrna's third provincial cult, granted in the early third century CE, was housed in the temple of the goddess Rome. See Barbara Burrell, "Neokoroi: Greek Cities of the Roman East" (Ph.D. diss., Harvard University, 1980) 342-44 for a discussion of Smyrna's third provincial cult.

⁷⁵ We cannot consult Tacitus on this matter because his account of the reign of Gaius has not survived.

⁷⁶ Suet. *Gaius* 21.

⁷⁷ J. P. V. D. Balsdon, *The Emperor Gaius (Caligula)* (Oxford: Clarendon Press, 1934) 162; Burrell, 327. Gaius is known to have promulgated the placement of statues of himself in venerable sanctuaries like the temple of Yahweh in Jerusalem (Tacitus, *Hist.* 5.9), and Gaius may have tried to do this at the temple of Apollo in Didyma as well.

⁷⁸ There is a bronze coin issued by Miletus with a head of Gaius on the obverse and a hexastyle temple of uncertain identity on the reverse; *BM Ionia* 198, #143. This could be a representation of the provincial temple, though Haussoullier (*Études*

tivals related to the cult. The reason for the silence is that this cult, like all others dedicated to the adopted son of Tiberius, was discontinued after Gaius's assassination. The emperor was not deified; in fact, Gaius's memory barely escaped the *damnatio* of the Senate.⁷⁹ The cult had to be terminated for it would immediately have become a problem for the province of Asia in its relations with Rome, and it would have been of little benefit to the city of Miletus.

Imperial Cults of Other Provinces

Not long after the inauguration of cults for Rome and Octavian in Asia and Bithynia, Galatia was incorporated into the Roman Empire as a province. The Temple of Rome and Augustus in Ankyra was built for this cult, probably around 25 BCE when Galatia became a province.⁸⁰ In 12 BCE an altar for Rome and Augustus was dedicated by the three Gallic provinces at Lugdunum, and within three years the province of Germania also had an altar. The latter was built in *Oppidum Ubiorum* (modern Cologne) but its significance was greatly reduced after 9 CE when Varus and the Roman troops were defeated in the Teutoburgerwald.⁸¹

Noricum's cult may have been instituted during the Augustan period, but the next datable provincial cult was established for Divus Augustus in Hispania Citerior in 15 CE, the year after his death.⁸² Britain's Temple of Claudius probably served a provincial cult, and while Deininger suggests that the cult of the province of Lusitania may have been from the Claudian period, it is first attested under Vespasian.⁸³ The reign of Vespasian is also the possible starting point for cults of Narbonensis, Africa, Baetica and Lycia.⁸⁴ Macedonia's provincial cult is attested under Nerva, but it may be somewhat earlier.⁸⁵

sur l'histoire de Milet et du Didymeion [Paris: Émile Bouillon, 1902] 277-78) thought the temple on the coin was the Didymeion which Gaius helped complete. His identification is questionable; the Didymeion was an octastyle temple at that time and such an important shrine would probably have been depicted more accurately.

⁷⁹ Suet. *Claudius* 11; Dio Cassius 60.4.5.

⁸⁰ Deininger 1965, 20. Note, however, Heidi Hänlein's argument that the cult was established only after the death of Augustus in "Zur Datierung des Augustustempels in Ankara," *AA*, 1981, no.3:511-13.

Summary

This brief review of Asia's early provincial imperial cults has explored a variety of patterns and institutions. A cult for Rome and Octavian, granted in 29 BCE, soon became known as that of Rome and Augustus, and was accompanied by a corresponding cult of Rome and Julius at Ephesus for resident Romans. The Rome and Julius cult made little impression on the province, while that of Augustus and Rome developed into a venerable cult of wide renown, serving as Asia's only provincial cult for over 50 years.

The new province of Galatia followed the lead of the cults of western Asia Minor by establishing a cult for Rome and Augustus as early as 25 BCE. There is no evidence that a cult of Rome and Julius was initiated in Galatia, though. The western provinces of the empire, on the other hand, proceeded more slowly in the establishment of provincial cults, inaugurating two altars and perhaps a temple for Rome and Augustus in his lifetime.

Tiberius allowed Hispania Citerior to honor Augustus with a temple in 15 CE and he followed Augustus's precedent, set some fifty years earlier, by approving a provincial cult for Asia in 23 CE that was dedicated to Tiberius, Livia, and the Senate. This cult was occasioned by two successful prosecutions of Roman officials by Asia before the Senate. After three years another hearing was required before the Senate in Rome in order to settle the dispute between the cities of Asia as to which one would serve as the site for the cult's temple. After criticism resulted from his approval of the cult, Tiberius initiated a new policy of not sanctioning similar petitions for provincial cults like the request that came from Hispania Ulterior.

Around the year 40 CE, Gaius promulgated a provincial cult for himself in Miletus, but his downfall brought down the cult as well. The small amount of surviving information about the cult indicates that it departed from the tradition of including figures other than the emperor (e.g., Rome, the Senate, Livia) in a provincial cult. The cult had a clearly defined, province-wide organization and it was more explicit in the use of divine terminology for the emperor.

Even though Claudius seems to have received cultic honors in Britain, neither he nor Nero received provincial worship in Asia. In fact, after Gaius there was no other provincial imperial cult established in Asia for over 40 years. In the next chapter it will be shown

that no such cult was inaugurated for either Vespasian or Titus in Asia during their lifetimes. Thus, it seems that the later policy of Tiberius (i.e., no provincial cults for the living emperor), was soon suspended by Gaius (ca. 40 CE), and that later emperors of the first century CE followed Gaius's policy rather than that of Tiberius. No emperor, however, is known to have granted any other province a second imperial cult even though Asia had two such cults. For nearly sixty years—from 26 CE until the reign of Domitian in the late first century CE—Asia had two provincial cults but was not successful in establishing a third.

CHAPTER TWO

THE TEMPLE INSCRIPTIONS FROM EPHESUS

Discovery of the Inscriptions

Several inscriptions with similar texts have been found during the last 125 years that are related to the provincial temple in Ephesus.¹ They are all dedications from various cities in Asia, set up for display in Ephesus. All but one of them are carved into rectangular marble blocks, the exception being inscribed into an unfluted marble column. The rectangular blocks are of a standard type that was used for statue bases in Asia in the imperial period (Pl. IV).

The total number of inscriptions in this group now stands at thirteen. The first one to come to light, a dedication from the people of Makedones Hyrkanioi, was found in the early 1870's during the British excavations.² A second inscription of the same general type, this one from the people of Aphrodisias and found near the Church of St. John on Ayasoluk Hill, was first published in 1880.³

When the Austrian Archaeological Institute began excavating in and around Ephesus during the late nineteenth century, several more temple inscriptions were discovered. In the mid-1890's six inscriptions were found built into a late bridge northwest of the village of Selçuk. These six were dedications from five cities: Tmolos, Stratonikeia, Silandos, Aizanoi (2 copies), and one unidentified locale.⁴ Within a few years, an inscription from Synaos was also unearthed in the theater.⁵

¹ The inscriptions have appeared in various publications with different numbering systems. In the text of this chapter, they will be referred to by their city of origin. The *IvE* publication numbers that correspond to the city names may be found in the notes and in the Chronological Chart on p. 46-47.

² E. L. Hicks, *IBM* 3.498 (no inventory number listed) = *IvE* 5.1498. The white marble stele is 3 ft., 11 in. high and 2 ft. wide.

³ *Mouseion Smyrna* 3 (1878-80) 180; *IvE* 2.233.

⁴ *IvE* 2.241, 237, 238, 232, 232a, and 242, respectively.

⁵ *IvE* 6.2048. Found in 1898-99, according to *FiE* 2, #48. The bottom half of the white marble block is missing so that its present height is only 0.46 m. Its width is 0.55 m. and the depth 0.56 m. The extant letters vary in height from 4 to 2.5 cm.

Plate IV. Statue base with inscription commissioned by the city of Keretapa for the dedication of the Temple of the Sebastoi.
IvE 2.234.

The remaining four inscriptions were found in more recent excavations. Miltner's campaigns from 1955 to 1958 near the Varius Baths uncovered the dedicatory inscription of Keretapa that had been reused as a roof support.⁶ Klazomenai's inscription was found

⁶ *IvE 2.234*. Also of white marble, the block measures 1.205 m. high, 0.595 m. wide, and 0.59 m. deep. The letters vary in height from 5 cm. (l. 1) to 3 cm. (l. 11-15). J. Keil and G. Maresch, "Epigraphische Nachlese zu Miltners Ausgrabungsberichten aus Ephesos," *ÖJh* 45 (1960) Beib. 83-84.

Plate V. Text of the Keretapa inscription. Note erasure of Domitian's personal names. This inscription was not reinscribed with a dedication to Vespasian.

west of the Trajan Fountain on Kuretes Street in 1955.⁷ The other two, from Teos and Kyme, were recovered near the Pollio Fountain and the Hydrekdochion, respectively.⁸

⁷ *IvE* 2.235. The blue-white marble block is 0.9 m. high, 0.58 m. wide, and 0.59 m. deep. Its largest letters are 8 cm. high, its smallest 2 cm. Anton Bammer, Robert Fleischer, Dieter Knibbe, *Führer durch das archäologische Museum in Selçuk—Ephesos* (Vienna: Österreichisches Archäologisches Institut, 1974) 115-16.

⁸ *IvE* 2.239, 240. The Teos dedication was discovered in 1964. It consists of two

Many of the thirteen inscriptions are no longer available for examination. The six inscriptions from the bridge over the Kaystros have disappeared since they were discovered and recorded. The fragmentary Teos and Kyme inscriptions are stored on site at Ephesus. One inscription, that of Klazomenai, can be viewed in the courtyard of the Ephesus Museum in Selçuk, and the Aphrodisias inscription is on display just inside the Gate of Persecution that serves as the entryway to the site of St. John's Church. The Synaos inscription remains in the orchestra of the theater in Ephesus and the Keretapa inscription is in the cryptoporticus west of and below the Scholastikia Baths where it was reused as a structural support in antiquity. The Hyrkanioi inscription is in the British Museum, London. The published descriptions and the available examples, along with squeezes where they exist, make the texts of the inscriptions very reliable.

The Texts of the Inscriptions

The thirteen inscriptions related to the imperial temple at Ephesus represent one basic pattern in two versions. The long version is found in the two inscriptions from the free cities Aphrodisias and Stratonikeia. The inscriptions commissioned by other cities use an abbreviated version (above, Pl. V).

The inscription from Aphrodisias provides an example of the long version that was used by the free cities.

	Αὐτοκράτορι [[Δομι-
2	τιανῶι]] Καίσαρι Σε-
	βαστῶι [[Γερμανικῶι]]

fragments of an unfluted column shaft (Inv. no. 3353-54) whose diameter is 0.64 m. Fritz Eichler, "Die österreichischen Ausgrabungen in Ephesos im Jahre 1964," *AnzWien* 102 (1965) 103-4, #2.

The pattern of these inscriptions can be summarized by noting that elements 1, 2, 3, 5, and 9 appear in all thirteen inscriptions. The inscriptions from Aphrodisias and Stratonikeia (i.e., those representing the long version) also include elements 4, 6, and 7. Elements 8, 10, and 11 appear occasionally in short and in long inscriptions.

The opening dedication to Domitian in the dative (lines 1-3) may indicate that a statue of the emperor once stood upon this base. A dative dedication, however, was a standard way of opening an honorary inscription and did not necessarily coincide with the identity of the statue.¹⁴ When a statue is identified in an inscription, it normally appears in the accusative. While a statue of Domitian or of another member of the imperial family would have been appropriate, we cannot be completely certain about the kinds of statues which these bases would have supported.

The content of the dedicatory phrase has implications for our understanding of the cult. The original inscription began Αὐτοκράτορι Δομιτιανῶι Καίσαρι Σεβαστῶι Γερμανικῶι, "To Emperor Domitian Caesar Sebastos Germanicus." This is normal nomenclature for Domitian after he adopted the title "Germanicus" in 83/84 CE. The term θεός was not used of Domitian in these inscriptions. Domitian was identified as a Sebastos, though, which makes him an object of worship in this particular temple. Thus, the vocabulary of the dedication as well as the numerous dedications themselves indicate that Domitian was central to the cult. With respect to the divinization of the emperor, however, the language of the dedications does not deviate from normal practice in the provincial cults. The use of Θεός in reference to a living emperor was not unusual in Asia at this time,¹⁵ but the term was studiously avoided in provincial cults. Thus, there is no suggestion of extraordinary cultic honors for Domitian or for any other imperial figure in this inscription.

¹⁴ *IvE* 7,2.3272 is an inscription from near Ephesus which begins with a dative dedication to Ephesian Artemis and to the κατοικία of the Lareisians, but explicitly states that the donors set up statues of two deer. An Ephesian inscription (*IvE* 3.858) from the year 104/105 CE dedicated a statue group to Ephesian Artemis, Trajan, and the neokorate demos, but left the statue group unidentified, referring to it simply as τὸ σύνπλεγμα ("the group"). Artemis, Trajan, and the demos would hardly have been the subjects of the statues; this was simply a standard, threefold dedicatory formula from the decades around the year 100 CE. For other examples of the formula, see *IvE* 4.1124 (Nerva); 2.424a (Street Fountain, Trajanic); and 2.429 (so-called Hadrian Temple).

¹⁵ S. R. F. Price, "Gods and Emperors: The Greek Language of the Roman Imperial Cult," *JHS* 104 (1984) 82.

The text of the inscription from Aphrodisias illuminates the nature of the cult in several other ways. The reader of the text is immediately informed by the naming of the proconsul that this cult had provincial, rather than just civic, importance (lines 4-5). Inscriptions dealing with matters of local interest or with municipal concerns normally included the name of the highest municipal official, the city secretary (γραμματεὺς τοῦ δήμου) as a dating device. Here, the presence of the proconsul's name both dates the inscription and indicates the regional significance of the monument.

One of the most significant aspects of the inscription for our understanding of the cult is that it contains the official title of the temple (l. 9-10). The temple is described in two ways. First, the temple is "in Ephesus" but "common to Asia." The implication is that it is not a temple dedicated only by Ephesus; it is rather a temenos of the whole province. Ephesus was the caretaker (or "neokoros," according to l. 13) for the cult.

Secondly, the temple is described as one for the Sebastoi, rather than for an individual. Who was included in this group of Sebastoi? One possibility is that Domitian and his wife Domitia were signified by this term. She and the imperial household are mentioned as part of a local cult in the Tmolos inscription,¹⁶ and she is depicted on at least one Ephesian coin that commemorated this provincial cult.¹⁷ This would require an unusual, although not unprecedented, use of the term "Sebastoi." In other inscriptions of western Asia Minor, "Sebastoi" usually indicates emperors, even though a wife of a given emperor is regularly called Σεβαστή. It seems that the customary way of referring to the imperial couple was as they appear in the Tmolos inscription: Δωμιτιάνος Καίσαρ καὶ Δομιτία Σεβαστή ("Domitian Caesar and Domitia Sebaste"),¹⁸ or as part of the imperial household.¹⁹ There are a few examples which do seem to

¹⁷ Josef Keil, "Die erste Kaiserneokorie von Ephesos," *Numismatische Zeitschrift* N.F. 12 (1919) 118 no. 12.

¹⁸ When the living wife of an emperor is referred to using divine or cultic terminology without reference to the emperor, there seems to be a tendency to assimilate her to a goddess. For example, the base for a statue of Domitia was found in 1979 in Stratonikeia with the inscription, Δομιτίαν νέαν Ἡραν τὴν γυναῖκα τοῦ Σεβαστοῦ ὁ δῆμος καθιέρωσεν "The demos erected (a statue of) Domitia, New Hera, wife of Sebastos" (*IvStr* 2, 1.1008). Livia was honored as the new Hera in Pergamum (*AvP* 8.2.385; 14-29 CE) and as Sebaste Demeter Karpophoros in Ephesus (*IvE* 7.2.4337; the nephews of Tiberius are also mentioned as the new Dioskoroi).

¹⁹ *IvE* 4.1393; *MAMA* 3.449 (Aphrodisias).

use “Sebastoi” for Augustus and Livia, and so it is not impossible that Domitia was included in the Cult of the Sebastoi in Ephesus.²⁰

Since the temple continued to be called the “Temple of the Sebastoi” after the death of Domitian,²¹ the original cult must have included more individuals than just Domitian and Domitia. What other emperors would have been included? If the emperors who suffered the *damnatio memoriae* or who were already objects of provincial cultic activity in Asia are eliminated from consideration, only Gaius,²² Claudius, Vespasian, Titus, and Domitian remain. Gaius could not have been included in such a cult after his assassination and the termination of plans for his cult in Miletus. There is no evidence that there was ever a cult of Claudius in Ephesus, and it would have been highly unusual to start one for him some 35 years after his death.

We are left, then, with the Flavians. Domitian, as the reigning emperor, would necessarily have been included in the cult. Vespasian, whose name replaced the erased name of his son in the temple inscriptions, would also have been included as the founder of the new line of emperors, and cultic activity for Titus is also probable.²³ Thus, on the basis of the description of the cult in the temple inscriptions, it is clear that the provincial cult of the Sebastoi in Ephesus was a cult for the emperors of the Flavian family, and perhaps included Domitia.

The dedications to Domitian on the statue bases lasted only a few years. After the assassination of Domitian in 96 CE, his name was to be stricken from all public records throughout the empire by order of the Senate in Rome. In Ephesus, nearly all references to him were changed through the removal of the names “Domitian” and “Germanicus.”²⁴ The two names were systematically removed

²⁰ Two inscriptions from Ankyra (*IGR* 4.555-56) and three from Aizanoi (*IGR* 4.582-84) testify to cults for the θεοὶ Σεβαστοὶ θεοὶ ὁμοβώμιοι (“the new gods Sebastoi who share an altar”). These gods Sebastoi were apparently Augustus and Livia.

²¹ The name of the temple was not changed on any of the thirteen inscriptions from which Domitian’s names were removed.

²² Claudius prevented the Senate from voting the *damnatio* for Gaius. Dio Cassius 60.4.5

²³ Even if Suetonius’s depiction of Domitian’s hatred for Titus (*Tit.* 9; *Dom.* 2) is factual, it would not necessarily have been a factor in the decision to include or exclude his deceased older brother from the family cult in Asia.

²⁴ The erasure of “Germanicus” has puzzled some scholars since several emperors carried this title. Reinhold Merkelbach (“Ephesische Parerga 26:

from the statue bases in the Temple of the Sebastoi precincts as well. On all but one of the extant inscriptions,²⁵ the stonemasons inscribed θεῶι in place of “Domitian,” and Οὐδεσπασιανῶι in place of “Germanicus.” In this way the statues were given a new dedication to the God Vespasian.

Cultic activity for Domitian would have been terminated in Ephesus as a result of the *damnatio memoriae*. The temple was not immediately renamed, however, for the phrase describing the cult (l. 9-10 in the Aphrodisias inscription) was not modified in any of the inscriptions,²⁶ indicating that “Temple of the Sebastoi” was still an appropriate name for the building. By the end of the second century CE, however, the emperor Titus seems to have become insignificant, for the cult was apparently referred to as that of Vespasian.²⁷

An examination of the content of the Aphrodisias inscription shows that the cultic vocabulary is intertwined with the language of political discourse. Terms such as ἐλεύθερος καὶ αὐτόνομος (“free and autonomous”), δῆμος, πόλις, Ἀσία and (repeatedly) Σεβαστός indicate that the provincial cult raised issues of political relationships at several levels.

One prominent issue in the inscriptions is the relationship of the cities of Asia to the emperor. The fact that all of these statues were dedicated to the living emperor has already been mentioned. In comparison with the other cities, the Aphrodisians emphasized their

Warum Domitians Siegername ‘Germanicus’ eradiert worden ist,” *ZPE* 34 [1979] 62-64) argued that Domitian used the title like a proper name because he was the first emperor to gain the title through a military victory rather than as an inherited family name. The title was not erased, however, from at least one inscription—a fragment of a statue base dedication (*IvE* 6.2047) found in the Ephesian theater.

²⁵ The inscription donated by the Keretapaiaans (*IvE* 2.234) had Domitian’s names erased but no reinscription took place. This was perhaps an accidental omission.

²⁶ Unfortunately, an inscription from 104/5 CE which refers to the temple by name is missing about a dozen characters at the crucial point (*IvE* 1a.27 l. 458) and so provides no evidence for the name of the temple in the next decade.

²⁷ *IvE* 3.710 b and c speak of the “temple of Vespasian.” *IvE* 7.1.3038 refers to someone who inherited the office of neokoros of the temple of Vespasian. The absence of a reference in these inscriptions to the temple’s provincial status is unusual, though. It is possible that these inscriptions might be related to a different, otherwise unknown, temple for a local cult of Vespasian.

alignment with imperial authority by describing their demos as φιλοκαῖσαρ (“devoted to Caesar”).²⁸

More germane, however, is the series of phrases that outlines a reciprocal relationship of the free cities to the emperor. The first statement on the subject is an assertion of the free status of the city (l. 7-8), but this is immediately defined as a status which has from the beginning depended upon the grace (χάρις) of the emperors. The freedom of the cities is due to the actions of the emperors.

The cities can act with their own grace as well. In this case the action entailed the erection of a monument dedicated to the current emperor in the temenos of the Sebastoi. This was done because of εὐσέβεια toward the Sebastoi (l. 11-12), the proper response of the cities to the emperors who have protected their ancient rights from the beginning.

The inauguration of the cult in Ephesus raised another issue that this inscription formula addressed: the relationships among the cities of Asia. The new cult and its related institutions changed the status of Ephesus among the cities of the province. Ephesus would henceforth be more prominent in provincial assemblies, it would have more claim to imperial favor, its wealthy citizens would have greater access to more distinguished offices, delegations from various cities would make annual trips to her festivals, and new sources of revenue would become available. How would the cities respond to this challenge to the status quo?

Here again, the inscriptions describe a complex relationship. The honor bestowed upon Ephesus is recognized by the reference to her as neokoros,²⁹ “caretaker” (of the Temple of the Sebastoi). The reference is long delayed, though, occurring only in line 13, after several positive statements about the donor city Aphrodisias.

²⁸ This is not a normal expression in inscriptions from Aphrodisias. Louis Robert (“Inscriptions d’Aphrodisias,” *AntCl* 35 [1966] 410-11) understood the whole phrase, “The demos of the Aphrodisians, devoted to Caesar, being free and autonomous from the beginning by the grace of the Sebastoi,” to be a special statement of fidelity to Caesar by the Aphrodisians for his role in procuring their free status. Since most of this phrase occurs in the inscription from Stratonikeia, and presumably in the (lost) inscriptions of the other free cities, it is possible to be more precise in describing the text. The role of the Sebastoi in establishing and maintaining the cities’ freedom was part of the standard formula for these dedications for the Temple of the Sebastoi. The Aphrodisians added φιλοκαῖσαρ to emphasize Caesar’s role in their acquisition of free status. The addition is unusual in a late first century CE inscription honoring a Flavian emperor.

²⁹ The development and significance of this term is discussed in chapter three.

Furthermore, the reference to Ephesus is couched in standard phrases from the language of benefaction. Εὐσέβεια ("reverence") and εὐνοία ("goodwill") are terms with a long history in the inscriptions of Asia. One or both of these two terms appear often with other terms³⁰ in praise of individuals, with certain phrases being favored in some regions³¹ or by particular cults.³² In all the varieties of specific usage, a distinction is generally maintained between these two words. Εὐσέβεια is an attitude or disposition which one ought to have toward deity³³ while εὐνοία is an honorable way to relate to a city, demos, homeland, or parents.³⁴

The significance of the benefaction language in the inscription from Aphrodisias is not that concepts regarding individual benefactors have been attributed to whole cities. These concepts were already used in the Hellenistic period for relations between cities, primarily in inscriptions thanking another city for sending one or more judges to deliver decisions.³⁵ Rather, the importance of the benefaction language is found in the particular way in which it is used in the inscriptions of the free cities. In the longer inscriptions about the Temple of the Sebastoi, laudatory comportment is not ascribed to others; it is the donor cities who commend themselves for their own virtues. Instead of praising Ephesus, the cities honor themselves by portraying themselves as the benefactors of Ephesus,

³⁰ For example: ἀρετή ("virtue"), *IvE* 4.1451, *IvMyl* 2.866 (Olymos); καλοκαγαθία ("noble character"), *IvPr* 108 l. 328; προθυμία ("eagerness"), *IvE* 5.1466.

³¹ In Iasos, the phrase ἀρετῆς ἕνεκεν καὶ εὐνοίας ἧς ἔχει [π]ερὶ τὸν δῆμον ("because of the virtue and goodwill which s/he has for the demos") and variants appeared often in Hellenistic honorary decrees; *IvI* 1.41; 51 l. 24; 59; 62. The combination was also used elsewhere (*IvE* 2.203; 5.1457; *OGIS* 472 [Didyma]).

³² Priestesses of Athena Polias and Athena Nikephoros in Pergamum were honored "because of reverence for the goddess and the goodwill of the parents toward the demos" (διὰ τε τὴν πρὸς τὴν θεὸν εὐσέβησαν καὶ τὴν τῶν γονέων αὐτῆς πρὸς τὸν δῆμον εὐνοίαν; *AvP* 8,2.489; 515) while in Smyrna other priestesses (of Demeter Karpophoros?) are praised for zealously providing all the things necessary "for reverence toward the goddess and for the feast of the initiates" (περὶ τὴν εὐσέβειαν τῆς θεοῦ καὶ τὴν τῶν μυστῶν ἑορτήν; *IvSm* 2,1.653; 654).

³³ Along with the examples in the previous note, see *AvP* 8,3.23; *IvSm* 2,1.639; *IvPr* 117 l. 63. An inscription from Iasos (*IvI* 1.122 l. 15) is an interesting exception which actually confirms the generalization; a widow commemorates her εὐσέβεια for her deceased husband who is now within the divine realm.

³⁴ See *IvI* 1.56 l. 10; 153 l. 9 (Samotheke); *IvE* 7,1.3049; *IvPr* 109 l. 34.

³⁵ For example, Iasos praises Priene (*IvI* 1.73; 74); Kalyrna praises Iasos (*IvI* 1.82); Bargylia honors Samos (*IvI* 2.609); Magnesia on the Meander honors Priene (*IvPr* 61).

toward whom they display εὐνοία.³⁶ Thus, the longer inscriptions tend to minimize the significance of the cult for Ephesus, while emphasizing the role of the other cities of the province.

The language of benefaction also confirms the tendency observed earlier of focusing the cult on the Sebastoi rather than on the living emperor,³⁷ for εὐσέβεια, a term used in relation to deity, is directed in the inscriptions toward the Sebastoi rather than toward Domitian alone. This accords with the name of the temple ("of the Sebastoi") and with the reference to the Sebastoi as the protectors of the free status of the cities. The inscriptions make clear that the public rhetoric of this provincial imperial cult acclaimed the emperors, not a single ruler, as the reason for its establishment.

The inscriptions of the cities without free status are much shorter, containing none of the elements that deal with inter-city relationships except the reference to the temple. After the dedication to Domitian and the naming of the proconsul, the shorter inscriptions include the donor city, the reference to the provincial temple, local officials from the donor city (usually), and officials related to the temple (highpriest, neokoros). Although the pattern of these shorter inscriptions relates them to the free city inscriptions, a distinction is maintained throughout. The brevity of their texts and the specific omissions placed the cities in a position of lesser status than the free cities.³⁸

These temple inscriptions are located at a turning point in the rhetoric of status among the cities of the province of Asia. In the inscriptions of the second century, the prominence of free city status decreased. The term "neokoros" that appeared only in the middle of some of these temple inscriptions, became one of the most coveted

³⁶ The use of benefactor language for the cities may be an indication that the cities contributed to the funding of the new temple and cult.

³⁷ Page 34.

³⁸ The pattern and content of the inscriptions related to the Temple of the Sebastoi in Ephesus are unparalleled in the inscriptions from Asia. Where did the formula originate? The establishment of a provincial cult could involve many "players," most notably municipal leaders, the provincial koinon, the proconsul, the Roman Senate, and the emperor. Given the preoccupation of the inscriptions with intercity relationships, the concern for the status of the cities with respect to the emperor, the absence of any statements about proconsular administrative issues, and the reticent attitude toward Ephesus, the most likely source for the texts of the inscriptions is the provincial council of Asia. The long and short versions of the formula were probably crafted in the koinon by the representatives of the cities of the province.

titles for elevating a city's public standing. This topic will be explored further in chapter three, after further examination of the inscriptions from the Temple of the Sebastoi.

The Date of the Cult of the Sebastoi

For nearly a century, arguments have been proposed for the various dates at which the province of Asia might have received permission to build the first provincial temple for the emperors in Ephesus. Since Keil's article in 1919 disproved the theory that Ephesus had a temple of Claudius,³⁹ three proposals have been suggested. In all three, the completion of the temple under Domitian is affirmed, but there is disagreement as to when the grant was made. Some have argued that Vespasian approved the request to build the temple,⁴⁰ while others have suggested that Titus may have been responsible for initiating the cult.⁴¹ Keil's conclusion that Domitian founded the cult has found supporters as well.⁴²

The main reason for the confusion on the dating of the temple was that L. Mestrius Florus, one of the proconsuls of Asia mentioned in the inscriptions, was previously thought to have served in 83/84 CE⁴³ while the other two proconsuls were dated late in the eighties

³⁹ Josef Keil, "Die erste Kaiserneukorie von Ephesos," *Numismatische Zeitschrift* N. F. 12 (1919) 115-20.

⁴⁰ See David Magie, *Roman Rule in Asia Minor* (Princeton: Princeton University, 1950) 1.572; 2.1434, for the outline of the argument. Barbara Burrell ("Neokoroi: Greek Cities of the Roman East" [Ph.D. diss., Harvard University, 1980] 255) tends to agree with him but concedes that Titus might have approved the request.

⁴¹ In Georg Daltrop, Ulrich Hausmann, and Max Wegner, *Die Flavien: Vespasian, Titus, Domitian, Nerva, Julia Titi, Domitilla, Domitia* (Berlin: Mann, 1966) 26, 38, the authors argued that statue fragments from the temple were part of an image of Titus, not of Domitian as is commonly thought. They implied, without clearly stating the conclusion, that the temple should also be identified with a cult of Titus. The temple is labeled as the "Temple of Titus?" on a few maps of Ephesus; e.g., *ÖJh* 50 (1972-5) Beib. 391-92.

⁴² E.g., S. R. F. Price, *Rituals and Power: The Roman Imperial Cult in Asia Minor* (Cambridge: Cambridge University, 1984) 178, 255.

⁴³ The 83/84 date apparently goes back to William H. Waddington (*Fastes des provinces asiatique de l'Empire romain* [Paris: Firmin-Didot Freres, 1872] 155-56, #102) who argued that Mestrius Florus must have been proconsul when Domitian acquired the name Germanicus in the year 83 CE, because some Smyrniote coins minted while Mestrius Florus was proconsul do not call Domitian "Germanicus" and others do. This interpretation appears in many standard references works, e.g., *PIR* 1,2 M 380; *PW* 15 (1932) 1293; *Kl.P.* 3 (1969) 1256.

of the first century CE. Werner Eck has shown, however, that Florus was proconsul of Asia in 88/89.⁴⁴ With the incorrect dating of Florus's proconsulship, these inscriptions seemed to have been scattered about at various times during the ninth decade of the first century CE. It is now clear, however, that the three succeeded each other as proconsuls: L. Mestrius Florus (88/89), M. Fulvius Gillo (89/90 CE), and L. Luscius Ocrea (90/91 CE). These inscriptions form a group, having been inscribed between the years of 88 and 91, and perhaps within as short a span of time as 89-90.

The reason for the commissioning of this group of inscriptions can be deduced from the reference to the temple in the thirteen temple inscriptions.⁴⁵ Specifically, we must consider why the temple is mentioned in the dative case. An honorary inscription like this normally uses the dative for the person or deity to whom the monument is dedicated, as is the case with Domitian in these inscriptions. We are not dealing with a double dedication ("to Domitian and to Asia's temple . . .") for there is a standard method for multiple dedications in which the objects of the dedication are listed in the dative and linked with καί at the beginning of the inscription.

An examination of other inscriptions from Asia shows that this particular use of the dative with the verb ἀνίστημι is unusual. Other epigraphic attestations of the verb from Ephesus provide no parallel for this construction.⁴⁶

The meaning of the construction can be discerned from the text of the inscription, though. The immediate context suggests that we

⁴⁴ Werner Eck, *Die Senatoren von Vespasian bis Hadrian* (Vestigia 13; Munich: Beck, 1970) 85-86, 236; idem, "Prokonsuln von Asia in der Flavisches-Traianischen Zeit" *ZPE* 45 (1982) 151; and, idem, "Jahres- und Provinzialfasten der senatorischen Statthalter von 69/70 bis 138/139," *Chiron* 12 (1982) 315-18. One of the factors in his argument was the way in which the offices overlapped in these temple inscriptions. His conclusions are now accepted as standard dates in the scholarly discussion (e.g., Brian Jones, *Domitian and the Senatorial Order: A Prosopographical Study of Domitian's relationship with the Senate, A.D. 81-96* [Philadelphia: American Philosophical Society, 1979]; *IvE* 2, p. 26, 38, 44).

⁴⁵ Lines 9-10 in the Aphrodisias inscription.

⁴⁶ The most common use of the verb is in a genitive absolute construction which concludes an inscription. This type of formula begins with the statue (the direct object) in the accusative case (usually τὴν ταμῆν [e.g., *IvE* 3.644] or τὸν ἀνδριάντα [e.g., *IvE* 3.642]) followed by the genitive participle ἀναστήσαντος (e.g., *IvE* 3.634) or ἀναστήσας (e.g., *IvE* 3.637). The person who erected the statue is then named in the genitive at the end of the formula. Other cities used much the same formula, though the word order could vary; see *IvI* 1.91; 118.

are dealing here with either a dative of location⁴⁷ or a dative of cause; the other Ephesian inscriptions help us at this point by narrowing the range of possibilities. Honorary inscriptions rarely mention the location of a dedication for the reader is normally standing in that location.⁴⁸ In an inscription using some form of ἀνίστημι, the location of a dedication (if mentioned at all) comes in a prepositional phrase. In fact, there is a mid-second century CE Ephesian inscription which mentions putting up statues in the provincial emperor temples in this way.

ἀνδριάντας ἀναστή[σαι]
 ἐν τε τοῖς ἱεροῖς τῆς Ἀσίας τῶν αὐτοκρατόρων
 ναοῖς ἐν τε τῇ φιλοσεβάστῳ Νύσῃ πατρίδι τοῦ Ἀλ-
 κιβιάδου στήλλην τε ἐν τῷ ἱερῷ τοῦ Ἀπόλλων[ος]
 ἀναγράψαι τῶν ψηφισμάτων. . .⁴⁹

. . . statues shall be set up in Asia's holy temples of the emperors, and a stele of (these) decrees shall be inscribed in the native city of Alkiabiades, Nysia, devoted to Sebastos, in the temple of Apollo. . .

Thus, the reference to the temple in the inscription from Aphrodisias must be a dative of cause which could be translated, "(The Aphrodisian people set this up) because of Asia's temple. . ." or "on the occasion of Asia's temple. . ." The exact meaning of this might still be unclear, were it not for analogous groups of inscriptions related to the inauguration of the Olympieion at Athens and the third neokorate temple at Ephesus. In both cases, various cities participated in the commemoration of the opening of newly-built temples and this participation was recorded in inscriptions.⁵⁰ Therefore, the inscription from Aphrodisias and the other twelve inscriptions related to the Temple of the Sebastoi must have been

⁴⁷ This is how Joyce Reynolds translated the phrase in *Aphrodisias and Rome* (Journal of Roman Studies Monographs 1; London: Society for the Promotion of Roman Studies, 1982) 167-68, document 42.

⁴⁸ Decrees or edicts will often include instructions as to the specific location where the inscription is to be exhibited; e.g., *IvE* 1a.6 l. 35-37 (second century BCE); *IvPr* 105 l. 67 (9 BCE); *IvE* 1a.21 l. 34-35 (138 CE).

⁴⁹ *IvE* 1a.22 l. 46-48.

⁵⁰ For the inscriptions related to the opening of the Olympieion in Athens under Hadrian, see Anna S. Benjamin, "The Altars of Hadrian in Athens and Hadrian's Panhellenic Program," *Hesperia* 32 (1968) 57-86. A similar phenomenon is attested by four inscriptions from Ephesus (*IvE* 6.2053-56) on statue bases set up by the city of Ephesus to honor cities who participated in the celebration of its third neokoria (211 CE).

commissioned for the inauguration of the provincial imperial temple in Ephesus.

This conclusion provides us with a date between 88 and 91 CE for the dedication of the precincts of the Temple of the Sebastoi.⁵¹ The inscriptions, however, allow us to be even more precise. Each of the inscriptions originally mentioned the proconsul and the highpriest of Asia who were in office at the time the inscription was executed. Both of these offices lasted one year, but they did not begin at the same time. The proconsul of Asia took office sometime in mid-summer,⁵² perhaps in July,⁵³ and it is generally agreed that a provincial highpriesthood began with Augustus's birthday, 23 September.⁵⁴ This overlap in terms of service of the two offices enables us to construct a chronology of the relative order in which the inscriptions were made, and the known dates of the proconsuls give the chronology a high degree of accuracy.⁵⁵

The chart on p. 46-47 places the inscriptions in their relative chronological order. Four of the thirteen inscriptions are missing the name of either the proconsul or the highpriest because of damage to the stones. Since these four each contain the name of one of the officials, they are included in the chart in their approximate (although not necessarily precise) position.

⁵¹ Four separate events must be distinguished here: the date of the approval for Ephesus to establish the cult; the beginning of construction of the precincts; the dedication of the precincts; and the completion of all building activities related to the precincts. The last two events could have been separated by a considerable span of time. The argument here is that construction had progressed at least to the point that cultic functions and related festivals were feasible by September of 90 CE at the latest.

⁵² Richard J. A. Talbert, *The Senate of Imperial Rome* (Princeton: Princeton University Press, 1984) 497-98.

⁵³ Timothy D. Barnes, *Tertullian: A Historical and Literary Study* (Oxford: Clarendon Press, 1971) 260-61.

⁵⁴ Rossner, "Asiarchen," 103 n.11. From 9 BCE, the new year in Asia began on Augustus's birthday (*IvPr* 105) and this seems to be the origin of the highpriestly year. The attempts of Aristides to avoid election to the provincial highpriesthood in the autumn of 147 CE appear to confirm this. Aristides *Or* 50.100-104.

⁵⁵ With only a few of the temple inscriptions at his disposal, William Ramsay realized that such a chronological ordering could be constructed (*The Social Basis of Roman Power in Asia Minor* [Aberdeen: Aberdeen University Press, 1941] 211-14) but his intention was to discover the order of the proconsuls and highpriests. He was not able to reconstruct an accurate chronology because some of the proconsuls were still incorrectly dated at that time. The small number of the inscriptions available to him also prevented any analysis of the other features of the inscriptions that affect the dating of the Cult of the Sebastoi.

The first column of the chart contains the name of the respective donor city. In this column the nine securely ordered inscriptions (i.e., those with the names of both officials still legible) are listed with uppercase letters. The four cities whose inscriptions are less securely ordered are entered with lowercase letters. The second column gives the name and date of the proconsul, and the name of the highpriest is found in the third column. In several cases, the inscription does not end with the highpriest, and the fourth column notes such circumstances: fragmentary ending, erasure, or the name of the neokoros of the temple. In the fifth column can be found the date of the inscription and in the sixth is the inscription's number in *IvE*.

Once the inscriptions are placed in chronological order, one feature stands out as significant for dating the temple and the cult: the two references to the neokoros of the temple are not optional elements that occur randomly. The neokoros is listed only in the last two inscriptions. There are only two possible explanations for this phenomenon: either the neokoros of this temple was a new office created in 89/90 CE; or, the office existed earlier but was left out of the other inscriptions. The latter possibility is highly unlikely because once the office is included, it appears at an especially significant point in the inscription, namely, at the end, next to the reference to the highpriest. The significance of the office is underscored by the first known holder: Tiberius Claudius Aristio, the most influential citizen of Ephesus from the late first century CE through the first quarter of the second century. Had such an important office existed before 90, it surely would have been included in the earlier inscriptions.⁵⁶

The reason for the sudden appearance of the neokoros in these inscriptions is to be found in the responsibilities which the position entailed.⁵⁷ The office of neokoros is often overlooked in modern treatments of Greek religion,⁵⁸ but it was an essential and widespread

⁵⁶ It should be noted that the four inscriptions before those which mention a neokoros end in erasures. It is possible that a neokoros could have been mentioned and erased in these earlier inscriptions and so the office could have been attested as early as September, 89 CE. In chapter five, however, I will argue that the erasures had a completely different motive and did not mention a neokoros of the temple. In fact, the erasures suggest the possibility of a more precise dating of the temple's inauguration.

⁵⁷ The responsibilities of a neokoros are described in more detail in chapter three, below.

⁵⁸ The term is not indexed in Martin Nilsson's *A History of Greek Religion*

CHRONOLOGICAL CHART OF THE INSCRIPTIONS FROM THE TEMPLE OF THE SEBASTOI

The inscriptions are listed in the relative order of their execution. The order of the inscriptions whose cities' names appear in capital letters is exact. Inscriptions executed under the same proconsul and highpriest are given in alphabetical order by city. The order of the inscriptions whose cities are listed with lower case letters is approximate because the name of only one of the two officials is extant. A proconsul took office in mid-summer; provincial highpriesthoods began on September 23.

CITY	PROCONSUL	HIGHPRIEST OF ASIA	FINAL FEATURE if not highpriest	DATE OF INSCRIPTION	<i>IVE</i> NUMBER

institution in antiquity. As will be shown in chapter three, the actual responsibilities of the neokoros could vary quite a bit from one cultic setting to another. In general, he or she assisted the priestly officials in the overall administration of a temple cult. This might involve caring for the facilities of a small shrine (Sikyon),⁵⁹ assisting the priests and guarding the precincts (Delos),⁶⁰ or witnessing legal transactions (Delphi).⁶¹ The Artemision of Ephesus was a significant banking center and the neokoros received money deposited there.⁶²

While we lack direct testimony about the nature of the office of neokoros for the Temple of the Sebastoi in Ephesus, we can conclude that this official dealt with administrative matters related to the finances or facilities of the Cult of the Sebastoi. It is also possible that in this case the neokoros did not actually execute these responsibilities but rather financed such services for a certain period of time.

The reason a neokoros was needed for the Temple of the Sebastoi by 90 CE is because that is the date when the temple and cult became fully functional. Before the temple was completed, the office was unnecessary. Once the temple began to operate, the office was crucial.

The temporal distribution of the extant temple inscriptions supports the conclusion that the temple was inaugurated in 89/90 CE. Only two of the thirteen inscriptions were late (i.e., executed after the naming of a neokoros). The majority of the inscriptions (8 or 9, 61 % or 69 %) were made under proconsul Gillo during the last year before the temple was opened. Two or three of the thirteen cities appear to have made their dedications early under proconsul Florus.⁶³

⁶² Xenophon *Anab.* 5.3.4-6.

⁶³ The excessive punctuality of the Keretapeians perhaps explains the short, unpublished inscription on the back side of the same block used for their official inscription. The back of the block is roughly dressed, but across its width stretches an inscription in which the top of the letters are approx. 18 cm. from the top of the block. The letters are approx. 5 cm. in height. The inscription reads: ΚΕΡΕΤΑΠΕΩΝ, "of the Keretapeians." This inscription appears to have reserved the marble block between the time when the representative of Keretapa (perhaps the Glykion mentioned in l. 11-12) selected it and the time when the work was actually executed.

Since the provincial Temple of the Sebastoi in Ephesus began to function by 90 CE (nine years after Domitian became emperor), there is no longer any reason to suppose that the privilege of instituting the cult was granted before the reign of Domitian. Nine years was more than enough time to send embassies to Rome, secure approval, and build the temple complex near the southwest corner of Ephesian upper agora.⁶⁴ In fact, it would be unusual for a project of this size to last as long as nine years.

Summary

This examination of the temple inscriptions has produced several conclusions about the cult. First, the inscriptions allow us to date the cult precisely since they indicate that the temple was dedicated in 89/90 CE. This in turn leads to the conclusion that the right to establish the provincial cult in Ephesus was granted by Domitian, in the early to mid-eighties of the first century CE.

Second, the inscriptions provide insight into the nature of the cult. While the dedications indicate that Domitian was the predominant figure in the cult, he was not the only recipient of worship at the temple. The inscriptions show that the temple was dedicated to the Sebastoi, of whom Domitian was one. The repeated use of the plural "Sebastoi" indicates that undue emphasis ought not to be placed on one or the other of these rulers.

As to the identities of the Sebastoi, it appears that cultic honors were offered to the three Flavian emperors (Vespasian, Titus and Domitian), and perhaps to Domitia. This original dedication to an imperial group allowed the cult to survive the ignominious demise of Domitian. After Domitian's downfall, the cult shifted its focus to Vespasian and flourished for at least another century.

Finally, the inscriptions reveal that the provincial cult of the Sebastoi in Ephesus occasioned concerns about the relationships among the cities of Asia. The free cities and the others used the opportunity of the temple dedication to make a statement about their role in the cult, their reverence for the emperor, and their relationship to Ephesus.

⁶⁴ The coin from Smyrna which depicts Livia and the Senate on the obverse and Tiberius in the provincial temple on the reverse (see Pl. III; *BM Ionia* 268 #266-68, pl. 28 #8; discussed above in chapter one) probably indicates that the temple was completed by the time the coin was minted. The coin records that it was minted while Petronius was proconsul. Since he served in that office from 29-35 CE, we can conclude that the temple was finished within a maximum of nine years after Smyrna received the right to build it in 26 CE.

CHAPTER THREE

DEVELOPMENTS IN CULTIC TRADITIONS

The provincial Cult of the Sebastoi in Ephesus provides us with an example of a Graeco-Roman cult whose inauguration in a given location can be dated precisely. This chapter examines the ways in which religious traditions were appropriated in the creation of this new cult. The use of the traditions in the media of inscriptions, architecture, and sculpture illuminates the religious significance of the cult for the city of Ephesus and for the province of Asia.

Ephesus, Neokoros of the Emperors

The term “neokoros” has become a standard part of the modern interpretation of provincial cults for the emperors. It is sometimes used adjectivally, as in “neokorate temple,” to specify provincial cults. Very few interpreters have noted, however, that the term neokoros was not used as a city title related to imperial cults until the establishment of the Sebastoi cult in Ephesus.¹ Why was this particular title chosen? What religious significance did it have?

The word neokoros was the title for certain officials associated with many different cults. The official, as suggested by the presence of the word νεώς in the title, was always associated with temple cults. In contrast to offices like the νεωποιοί,² there was rarely more than one neokoros at a temple. Also, there was a tendency for goddesses to have a female neokoros, while male deities usually had a male neokoros.³

¹ Burrell (“*Neokoroi*: Greek Cities of the Roman East” [Ph.D. diss., Harvard University, 1980] 204, 253-54) noted that the term does not appear in relationship to cities until the late first century CE, but she still used the term to refer to earlier provincial cults. S. R. F. Price (*Rituals and Power* [Cambridge: Cambridge University Press, 1984] 64-65, esp. n. 47) clearly recognized that the cult in Ephesus was a turning point in the use of the term, but did not analyze the significance of the imagery. He continued to use “neokorate” as a label for provincial cults prior to the one founded in Ephesus.

² See above, chapter one.

³ E.g., Pausanias recorded that a small temple of Aphrodite at Sikyon near Corinth could be entered only by the celibate female neokoros and the annually

The responsibilities of a neokoros were seen as complementary to those of priests and priestesses. In Plato's recounting, Sokrates required two types of officials to care for the temple cults in his ideal state: priests or priestesses, and neokoroi.⁴ This connection of priestly officials and neokoroi can be seen in the epigraphic evidence as well. For example, an inscription on a marble stele from Skepsis lists the various exemptions (tax, military, etc.) for the priest of Dionysos Bambyleios, and then notes that they apply also to the neokoros.⁵

It is not surprising, therefore, that the neokoros often seems to be an official who assists in the performance of priestly duties. An inscription from Pergamum describing how the proceeds of sacrifices to Athena Nikephoros are to be distributed includes the neokoros among the other cultic officials: the annually elected ἱερονόμοι received the skins of the sheep and lambs, while the neokoros, the flute player, and the ὀλολύκτρια (crier) were all entitled to a small amount of money (two obols or a half obol, depending on the kind of sacrifice).⁶ In Delphi, the neokoros was often included with the priests and others as a witness in manumission decrees.⁷ Philo also used the term in a way which implies both cultic involvement and a distinction from priestly office when he described the tribe of Levites as being comprised of priests and neokoroi,⁸ and when he called the Levitical cities of refuge "cities of neokoroi" (πόλεις νεωκόρων).⁹

On some occasions, the neokoros functioned as a guard for a precinct or for the possessions of the deity. A fourth century BCE inscription from Arkesine on Amorgos indicates that the neokoros of the local Heraion was ordered to ensure that no strangers (ξένοι)

elected *parthenos*; Pausanias 2.10.4. Ephesian Artemis, however, had a male neokoros, and Pausanias also mentioned (12.5) that a sibyl named Herophile served as the neokoros of Apollo Smintheus in Alexandria in the Troad.

⁴ Plato, *Laws* 6.759. Sokrates mentioned later that exegetes and treasurers should also be appointed, but these are clearly of secondary importance.

⁵ Z. Taşliklioglu and P. Frisch, "New Inscriptions from the Troad," *ZPE* 17 (1975) 106-9. The inscription probably comes from the second century BCE. It is now in the museum of Çanakkale.

⁶ *AvP* 8, 2.255.

⁷ G. Colin (ed.), *Épigraphie*, vol. 3, 2 of *Fouilles de Delphes* (Paris: Fontemoing, 1909) e.g., 128; 215; 223.

⁸ *De fuga* 93.

⁹ *De fuga* 94.

were brought into the sacred area.¹⁰ In a very different situation, Xenophon entrusted a large amount of booty to the neokoros of Artemis at Ephesus. The treasure was to be used for a votive offering to the Ephesian Artemis, but Xenophon had to leave on another military campaign before he could arrange for the offering.¹¹ The status of the neokoros of Ephesian Artemis was considerably higher than that of a mere watchman, for he later traveled to Olympia to attend the games. There, the neokoros met Xenophon and returned the deposit.¹²

The island of Delos presents an interesting case: there are at least four different neokoros offices attested in a given locale during the third and early second centuries BCE. The different cults paid different salaries and seem to have required different services. The neokoros of the Asklepion had his own building where he probably stayed and perhaps kept watch over votive offerings for the god. The neokoros of Sarapis also seems to have resided at a sanctuary and may have assisted the priests in their duties. Three neokoroi—of the Asklepion, of the Archegesion, and of the island—are known to have held their offices for more than one year in the mid-third century BCE.¹³

There are also examples, primarily in the Roman period, where the neokoros becomes an office which is more or less a *leitourgia*, a responsibility taken on for the civic good. In the third century CE, for example, three decrees commended Aurelius Hermodoros (neokoros of the goddess Archegetis of Chalkis) for rebuilding the precinct walls, putting up stoas, building a triclinium, and providing trees and plants for the sacred area. In return, he was made neokoros for life, and the office became hereditary.¹⁴

To sum up, then, the responsibilities of a neokoros were not necessarily the same in every locale nor at every time. In general, the neokoros was charged with the care of sacred facilities, equip-

¹¹ Xenophon, *Anab.* 5.3.4-6.

¹² *Anab.* 5.3.7-13. The money was used to buy a plot of wooded land near Olympia. Xenophon built an altar and a small temple modeled on the Artemision in Ephesus, and had a statue of the Ephesian Artemis placed in the temple. He also endowed annual festivals for the goddess there.

¹³ Philippe Bruneau, *Recherches sur les cultes de Délos à l'époque hellénistique et l'époque impériale* (Paris: E. de Boccard, 1970) 500-504.

¹⁴ SIG 2.898, discovered in Chalkis.

ment, or funds. He or she might also assist priestly officials in their sacrificial duties. The needs of a small cultic institution were usually different from those of larger ones, and it seems that the nature of a particular cult also affected the duties of its neokoros. The office sometimes lasted a year; other times it was granted for life.

At some point, certain cities began to call themselves neokoros in relation to a deity. This shift from individual office to municipal self-designation is difficult to trace because there are so few references to it. In fact, there are no literary, epigraphic, or numismatic references to a city as neokoros before the first century CE, although the concept may have been in popular use for some time before this without becoming an official designation. This unofficial use accounts for the three known examples from Asia during the first century or early second century CE where a city uses the title for itself.¹⁵ Two of the references are related to Ephesus.

An Ephesian coin from the reign of Nero portrays the emperor on the obverse.¹⁶ The reverse names the proconsul of Asia Marcilius Acilius Aviola, whose service in 65/66 CE provides the date for the coin. The reverse also depicts a temple with four columns in front and six on the side, and bears the words Ἐφ(εσίων) νεωκόρων (“of the neokorate Ephesians”). Pick interpreted the coin to be a reference to an otherwise unattested provincial cult of Claudius at Ephesus,¹⁷ but Keil pointed out the problems with Pick’s reasoning and argued that the coin referred to Ephesus as the neokoros of Artemis.¹⁸ Keil’s conclusion is the most reasonable solution, although the temple on the coin is not a faithful representation of the Artemision.

¹⁵ One inscription from Beroia in Macedonia (*SEG* 17 [1960] 315) honors a certain Q. Popillius Pytho who requested from Nerva the right of his native city Beroia to retain sole use of the titles “neokoros” and “metropolis.” This sole right pertained to the province of Macedonia, since Ephesus was already neokoros. The inscription might have been erected after the death of Nerva, but the request of Pytho would certainly have been made in the years 96-98 CE. The date of Macedonia’s first provincial cult is not known since this is the first attestation of the cult. It may be that Beroia, like Ephesus, became neokoros of the Sebastoi under Domitian, or they may have had a provincial cult because of which the city later became known as neokoros.

¹⁶ Mionnet 3.93 #253; B. Pick, “Die Neokorien von Ephesos,” in *Corolla Numismatica. Essays in Honour of Barclay V. Head* (London: Oxford University Press, 1906) 234-44.

¹⁷ Pick 1906, 235-36.

¹⁸ Josef Keil, “Die erste Kaiserveokorie von Ephesos,” *Numismatische Zeitschrift* N. F. 12 (1919) 115-20.

The other neokoros reference related to Ephesus gives Keil's argument weight. At some time later than the Neronian coin, the author of the book of Acts recorded the fact that the city of the Ephesians was known throughout the world as the neokoros of Artemis.¹⁹ This element in the narrative—the appellation for the city—seems to reflect accurately the situation in the last half of the first century CE, for the speaker's argument rested on the assumption that the idea was common knowledge.

One epigraphic reference is earlier than either of the two Ephesian examples, however. In the year 38 CE, the boule and the demos of the Kyzikenes published a decree honoring Antonia Tryphaina for her benefactions toward the city and her piety toward Augustus and the imperial house.²⁰ The inscription, although interesting for several reasons, is important to this study because it provides the first known attestation of a city called "neokoros." Furthermore, the city calls itself neokoros of the family of emperor Gaius: ἀρχαίαν καὶ προγονικὴν τοῦ γένους αὐτοῦ νεωκόρον ἐπανακτωμένη πόλιν.²¹

The use of the term neokoros in the Kyzikos inscription was not yet an official city title. The term is not attested in any other contemporary inscriptions or coins, and even in this inscription it occurs but once in the midsection of the text. Rather, the Kyzikenes took the popular notion of a city as neokoros and applied it to their multifaceted relationship to the imperial family line of Gaius.

Tryphaina, who had assisted Kyzikos in many ways, had manifold connections to Gaius. She and Gaius were descendants of Mark Antony by different wives (she through Antonia, he through Octavia). As the wife of Cotys II, king of Thrace (12-19 CE),

¹⁹ Acts 19:35. This reference could well be later than the Cult of the Sebastoi in Ephesus. According to Werner Kümmel (*Introduction to the New Testament* [rev. ed.; Nashville: Abingdon, 1975] 186), "The most likely assumption . . . is a date for Acts between 80 and 90, but a date between 90 and 100 is not excluded." Helmut Koester (*Introduction to the New Testament* [Philadelphia: Fortress, 1982] 2:310) prefers a date around 135 CE.

²⁰ *SIG* 2.799 = *IGR* 4.146. Note the improvements of the text by F. W. Hasluck in *ABSA* 12 (1905-06) 183. See also *AthMitt* 7 (1891) 141-44; and Andre Joubin, "Inscription de Cyzique," *REG* 6 (1893) 8-22. The stone, found in 1889, measures 0.90 m. high, 1.25 m. wide, and 0.20 m. deep.

²¹ "... (she) restoring the ancient and ancestral city, (which is) neokoros of his [i.e., Gaius's] family . . ." (l. 9-10). The emperor is referred to as μέγιστος καὶ [ἐ]πιφανέστατος θεός [[Γαῖος]] Καῖσαρ, "(the) great and most eminent god [[Gaius]] Caesar" (l. 8-9).

Tryphaina bore three sons. These three boys were taken to Rome after their father was assassinated in 19 CE. There they became close friends of their cousin Gaius. Not long after Gaius became emperor, he appointed the three sons of Tryphaina to be kings of Thrace, Pontus, and Armenia Minor. Thus, there were biological and emotional, as well as political, ties between Tryphaina and Gaius.

Kyzikos could claim yet another way in which it was related to Gaius. The city lost its free status in 20 BCE but regained it from Augustus in 15 BCE through the assistance of Marcus Vipsanius Agrippa.²² Agrippa, Gaius's maternal grandfather, is likened in lines 6-7 of the inscription to the city's legendary founder king Kyzikos.

In this inscription, then, the city used the *neokoros* terminology to emphasize the many aspects of their affiliation with the branch of the imperial family that gained ascendancy when Gaius came to power. This shift in dynastic power was especially significant to Kyzikos, for the city had lost its free status once again in 25 CE under the previous emperor Tiberius.

The Kyzikos inscription, the Ephesian coin, and the situation reflected in Acts 19 are the only extant examples of a city calling itself *neokoros* prior to the establishment of the Cult of the Sebastoi in Ephesus. The ambiguity of the coin makes it of little value for understanding the significance of the *neokoros* imagery. In the case of Kyzikos, however, the term describes a relationship of interdependence and fidelity: the city was refounded, and later renovated, by Gaius's line and had remained faithful to that family over the years. While Augustus's role is not slighted,²³ the more intimate relations with the Agrippan and Antonian lines are emphasized.

Acts 19 emphasizes a different aspect of the *neokoros* relationship between a city and a deity. While the Kyzikos inscription reflects the benefits for the faithful city, the Ephesian situation suggests the responsibilities of the city. According to the usage of the author of Acts, the concept of the city as *neokoros* implies that the Ephesians

²² Dio Cassius 54.7.6; 54.23.7.

²³ See l. 3-4 (Tryphaina's performance of acts of εὐσέβεια toward Augustus), l. 6 (the votive is for Augustus), and l. 8 (the peace of Augustus).

were responsible for guarding the goddess's honor when it was endangered by the work of the Christian apostle Paul.²⁴

These different portraits of the role of the neokoros city grow out of the situations of the respective cities. Kyzikos had been beset by a series of problems in relationship to Roman authority. Ephesus, on the other hand, was prospering under the aegis of its civic deity. Both aspects of the role of the neokoros, however, were consistent with the source of the neokoros imagery—the temple official who assisted in the sacrificial duties and who kept watch over that which belonged to the deity.

This concept was taken up in the Ephesian Cult of the Sebastoi and elevated to the status of an official title for the city. In Ephesus, however, the adoption of this title for the Cult of the Sebastoi had special import. Ephesian Artemis was the preeminent deity of her neokoros Ephesus. The use of this term for the Cult of the Sebastoi immediately raised the cult's status to that of the most significant cult in the city and the region.²⁵

The Ephesians went one step further to confirm the high esteem they sought for the Cult of the Sebastoi. On at least two coins of the Domitianic period, the Ephesians called themselves "twice neokoros," i.e., of Artemis and of the Sebastoi.²⁶ One coin has the head of Domitian, crowned with a laurel wreath, on the obverse and his titles Δομτιανὸς Καῖσαρ Σεβασ(τὸς) Γερμανικὸς Αὐτοκράτ(ωρ). The reverse of this coin shows a temple front with two columns on either side of the statue of Ephesian Artemis, around which is the phrase Ἐφεσίων Β Νεοκόρων. The second coin depicts a bust of Domitia with the legend Δομτία Σεβαστή on the obverse; on the reverse is an eight-columned temple front with Ephesian Artemis in the middle and the phrase Ἐφεσίων Δ[ις Νε]οκόρων.²⁷ These two coins present a vivid visual image of the city's new religious

²⁴ Acts 19:27, 37. Verse 34 might imply that Jews in general, not just those who claimed allegiance to Jesus, were viewed as denigrating the dignity of the goddess. For a review of source-critical theories on the reference to Alexander, and on the relation of this story to the tradition of Jewish requests for toleration, see Robert F. Stoops, Jr., "Riot and Assembly: The Social context of Acts 19:23-41," *JBL* 108 (1989) 73-91.

situation. The city now had two dominant cults of equivalent significance: that of Ephesian Artemis, and that of the Emperors.²⁸

Ephesus apparently had more freedom to create city titles on its coinage than in its inscriptions. The “twice neokoros” slogan is not known in the epigraphic record of this period. Rather, the inscriptions used “neokoros” without any numbers until the city received its second provincial cult under Hadrian (ca. 130 CE). After the two exceptional “twice neokoros” coins, the numismatic evidence matches what appears to have been the epigraphic practice of Ephesus.

The neokoros concept was corporate rather than individual, for the term normally occurs in reference to the demos or polis as the party involved in the Cult of the Sebastoi.²⁹ The adjective “neokoros” appears in the plural modifying “Ephesians” on the “twice neokoros” coins mentioned above, but “neokoros” never modified βουλή.³⁰ Thus, the entire city, and not just its representative council, was included in the imagery of the Cult of the Sebastoi.

While commentators have occasionally noted that the use of neokoros as an official, municipal self-designation began in Ephesus with the cult of the Sebastoi, it has not been recognized before that this constituted the starting point for the proliferation of city titles in Asia in the second century CE. Before the granting of the Cult to Ephesus, inscriptions of the cities simply referred to the boule and the demos. With the advent of the neokoros title, however, a process began that changed the epigraphic and numismatic record of the eastern Roman Empire.

For example, in 89/90 CE when the cult of the Sebastoi was inaugurated at Ephesus, Smyrna had already possessed a provincial cult for over 60 years and Pergamum for nearly 120 years. Neither city had previously called itself neokoros of an emperor, though. City titles begin to show up in a few of the inscriptions from Smyrna after the late first century CE, but that city’s reaction to Ephesus’s

²⁸ This coin might suggest that Domitia was one of the recipients of worship in the Cult of the Sebastoi (see above, chapter two). It is not unusual, however, for the wives of emperors to appear on the obverse of coins from western Asia Minor. Domitia appears on the obverse of a coin from Smyrna (*BM Ionia* 274 #309), as does Julia Titi (*BM Ionia* 275 #311-14).

²⁹ E.g., *IvE* 1a.27 l. 132; 2.236; 2.264.

³⁰ See *IvE* 1a.27, l. 4; and 2.266.

new status is difficult to trace because of the small number of Smyrniote inscriptions known from this period.³¹

The evidence for Pergamum, however, clearly documents the importance of such titles for the inhabitants of Asia's cities.³² In the early years of Trajan's reign, the city of Pergamum stopped using the simple title ἡ βουλὴ καὶ ὁ δῆμος in its inscriptions and replaced it with ἡ βουλὴ καὶ ὁ δῆμος τῶν νεωκόρων Περγαμηνῶν "the boule and the demos of the neokorate Pergamenes."³³ In a matter of a few years, the Pergamenes amended their official title to show that they were the first city of Asia to receive a provincial cult and so the inscriptions from about 102-114 CE read ἡ βουλὴ καὶ ὁ δῆμος τῶν πρώτων νεωκόρων Περγαμηνῶν.³⁴ In 114 CE, the city received a second provincial cult from Trajan and initiated the title ἡ βουλὴ καὶ ὁ δῆμος τῶν πρώτων καὶ δις νεωκόρων Περγαμηνῶν.³⁵ In 120 CE the title appears with the addition of the term μητρόπολις.³⁶

Thus, the innovation at Ephesus that took a religious concept with local significance and turned it into an official city title related to the Cult of the Sebastoi spread quickly throughout the province, and then beyond. By the mid-third century CE, the title was in use from Beroia in Macedonia to Neapolis (modern Nablus) in Samaria. An inscription from Sardis of the fifth century CE preserves the last known occurrence of the title.³⁷

Such an expansion of the use of city titles in the eastern Mediterranean could hardly have been envisioned when Ephesus became the neokoros of the Sebastoi in the late first century CE. This innovation, however, developed into the primary means by which the

³¹ Smyrna received its second provincial cult around the year 123 CE from Hadrian. The beginning of a list of contributors for a harbor project (*IvSm* 2,1.696) appears to refer to the city as having only one provincial cult ἡ νεοκόρος Σμυρναίων πόλις), but it cannot be dated with precision. Other inscriptions use the same wording but are known to have come from the time when Smyrna had two provincial cults (e.g., *IGR* 4.1388). *IvSm* 2,1.594 (124 CE) might be an inscription about the organization of the second provincial cult. An early third century CE inscription (*IvSm* 2,1.640) mentions three provincial cults in Smyrna.

³² The development of Pergamum's official titles is outlined and documented in *AvP* 8,3 p. 158-61. See also Burrell 1980, 248.

larger cities asserted their status in relation to one another. The use of city titles constituted a fundamental development in the political and religious propaganda of the Empire.

Architecture, Sculpture, and the Emperors

In 1930, Josef Keil conducted an excavation on top of an artificial terrace built in the Roman imperial period near the southwest corner of the Ephesian upper agora (Fig. 2). Prior to that time, the function of the terrace had been unclear. Earlier discoveries of several large marble friezes in different sections of Ephesus had revealed the existence of a large "Parthian Monument" that was yet to be found, and there was an expectation that the remains of this monument would be uncovered atop the terrace. As the excavation progressed, it became clear that the terrace supported the foundations of a temple. The identification of the temple was unknown until the

Plate VI. Statue fragment: Head of Titus. Archaeological Museum, Izmir. Courtesy of Helmut Koester.

excavators uncovered the head and left forearm of a colossal, akrolithic male statue in the 3.9 meter wide barrel-vaulted cryptoporticus under the terrace (Pl. VI-VII).³⁸

The statue fragments found in the cryptoporticus were immediately identified by Keil as a likeness of Domitian, which in turn

was used as an argument for the identification of the temple on the terrace.³⁹ Later excavations below the northeast corner of the precincts confirmed Keil's hypothesis about the identification of the temple by dating the building of the terrace to the late first cen-

³⁹ Keil 1931, 59-60.

tury.⁴⁰ Keil's team had found the site of the provincial temple built in Ephesus during Domitian's reign.

The identification of the statue as an image of Domitian, however, has been questioned by Georg Daltrop and Max Wegner, who argued convincingly that the features of the face are those one finds on portraits of Domitian's older brother Titus (emperor, 79-81 CE).⁴¹ They implied that the identification of the temple with a cult of Domitian was tenuous as well,⁴² but the discussion about the identification of the temple and the statue has been hampered by the lack of clarity regarding the nature of the provincial cult established in Ephesus. The arguments in the previous chapter of this study showed that the cult was dedicated to several emperors. Therefore, the existence of a statue of Titus can now be understood properly as one of at least three statues related to the Cult of the Sebastoi, not as an argument that the cult began in the time of Titus.⁴³ Similar statues of Vespasian and Domitian, and perhaps of Domitia, would also have been present in the temple.⁴⁴

The features of the head of Titus are a little unusual and do not reflect the standard portrait of Titus in the city of Rome. Rather, Wegner noted that the head was an especially interesting example of Asian workmanship that he called "das 'asianische' Barock."⁴⁵ The left forearm, now standing upright next to the head of Titus in

⁴⁰ These excavations, dealing with the situation in the area before the construction of the terrace, are discussed below, p. 69-70.

⁴¹ Georg Daltrop, Ulrich Hausmann, and Max Wegner, *Die Flavii: Vespasian, Titus, Domitian, Nerva, Julia Titi, Domitilla, Domitia* (Berlin: Mann, 1966) 26, 38, 86, and pl. 15b. The more general study by Jale Inan and Elisabeth Rosenbaum (*Roman and Early Byzantine Portrait Sculpture in Asia Minor* [London: Oxford University Press, 1966] 67, and pl. 16 #1) accepts the identification as Domitian.

⁴² Georg Daltrop et al. 1966, 38, 100.

⁴³ Wegner suggested that the unusual size of the statue and the provincial workmanship might account for certain irregularities, and that the sculpture might have been executed posthumously. Daltrop et al. 1966, 86.

⁴⁴ Bammer's suggestion ("Römische und byzantinische Architektur", *ÖJh* 50 [1972-75] Beib. 386-89) that this statue stood outside above the terrace's monumental north entrance cannot be correct. The back of the statue's head is hollowed out to decrease its weight. This was done because the statue was designed to be placed near a wall where the back would not be seen. Also, an akrolithic statue cannot be left outside in the elements because its wooden torso would deteriorate rapidly.

⁴⁵ Daltrop et al. 1966, 26. The head (inv. #670) measures 0.740 m., chin to crown, and is made of course-grained white marble. Inan and Rosenbaum 1966, 67.

the Archaeological Museum in Izmir, Turkey, is as tall as an adult. The left hand has a groove in which a spear was held, which agrees with Ephesian coins depicting this temple with a statue in a standing position and holding a spear.⁴⁶

Colossal statues in Asia were normally smaller than the Titus statue.⁴⁷ A pair of over lifesize statues was found in 1966 in the eastern end of the Royal Stoa of the Ephesian upper agora⁴⁸ that were not a part of the Cult of the Sebastoi. The pair of seated statues from the Royal Stoa are about one and one third lifesize and have been identified as statues of Augustus and Livia. They probably were placed in the set of rooms known as the "Chalcidicum" at the east end of the Royal Stoa, probably no later than the death of Livia (26 CE).⁴⁹ It is unknown whether cultic activities took place in the Chalcidicum. The statues of Augustus and Livia nevertheless provide comparative material on the size of the temple statues in the Cult of the Sebastoi.

There were also a few other statues of deities and of rulers in Asia of approximately the same magnitude as the statue of Titus. Apollo, Artemis, and Leto were portrayed at Claros by statues approx. eight m. tall.⁵⁰ At Sardis, pieces from the head of a colossal Zeus have been found as well as the lower part of the head of Antoninus Pius, who seems to have moved into the temple occupied by Zeus.⁵¹ Both colossals from Sardis were of approximately the same proportions as the statue of Titus from Ephesus.

During Keil's excavation in 1930, recognition of the temple floor-plan was slowed by the presence of a later wall—part of a Byzantine cistern—that covered the temple foundations (Fig. 3). Underneath this rubble wall lies the 34 × 24 m. base of the temple. The cella

⁴⁶ *BM Ionia* 91, #305, and pl. 14, #6; Fernand Chapouthier, "La Coiffe d'Artémis dans Éphèse trois fois neocore," *REA* 40 (1938) pl. 3, #3 and 4.

⁴⁷ See Price 1984b, 187 and 255, for a discussion of colossal statues in Roman Asia Minor.

⁴⁸ The find site is roughly 200 meters east of the temple terrace's northeast corner in the Royal Stoa (see Fig. 2).

(after ÖJh 27 [1932] B. 55-56).

had an interior measurement of about 7.5×13 m.⁵² The preserved clamp holes and foundations show that the tetraprostyle temple was surrounded by a pseudodipteral colonnade (8×13 columns). The temple sat upon a crepidoma with six steps on all sides (Fig. 4).

⁵² The size of the temple cella raises the question of how many statues would have fit inside the temple. A statue like that of the colossal Titus would require a base approximately 3.5 meters wide and 2 meters deep. A maximum of five such bases, one in back and two on each side, could have fit in the temple cella. Proof of the actual number of statues and of their disposition in the temple will perhaps be available if further excavations are carried out in the cella area. For an example of another imperial cult temple with multiple statues, see Shelley C. Stone, III, "The Imperial Sculptural Group in the Metroon at Olympia," *AthMitt* 100 (1985) 377-91; Georg Treu, *Die Bildwerke von Olympia in Stein und Thon* (Olympia 3; Berlin: Ascher, 1897) 232-35.

Plate VIII. Ephesian coin showing Temple of the Sebastoi (right?), Temple of Hadrian, and Temple of Artemis (center). *BM Ionia* 83 #261. Courtesy of the Trustees of the British Museum.

Reconstruction of the superstructure of the medium-sized temple has not been possible because only a few fragments of the building itself have been found. The temple appears on the reverses of several Ephesian coins alongside the temple of Artemis, and sometimes with other later provincial temples from Ephesus as well (Pl. VIII-IX).⁵³ While these are not always accurate regarding details, they do provide a general description. The coins depict an octastyle temple but the order appears to be Ionic rather than the Corinthian order that was normally employed in early imperial temple building. Bluma Trell has suggested that this was simply a convention by which the Ionic order of the Artemision influenced the way the other temples were depicted on a given coin.⁵⁴ Thus, the original order was probably Corinthian.

The temple was set within a precinct that occupied the entire area

⁵³ *REA* 40 (1938) pl. 3.3-6. *BM Ionia* 92 #306; pl. 14 #6.). Examples are conveniently assembled in Bluma Trell, *The Temple of Artemis at Ephesus* (New York: American Numismatic Society, 1945) pl. 6 #3-5; and pl. 7 #1-3.

⁵⁴ Trell 1945, 58-59. The Temple of the Sebastoi is shown with three doors in the pediment, but this may also be an assimilation to a known feature of the Artemision. Trell's suggestion that the so-called Sarapeion was the second neokorate temple built for Hadrian is no longer tenable. The argument that the "Sarapeion" was a temple for the Egyptian deities has been supported by recent discoveries (Günter Hölbl, "Die ägyptische Wasserauslauffuhr aus Ephesos. III. Die ägyptische Wasseruhr Ptolemaus' II," *ÖJh* 55 [1984] Beib.21-68; Steven Friesen, "Ephesus A" *ARNTS* 2, forthcoming). Recent excavations have begun to unearth massive temple foundations north of the basilica/Church of Mary that appear to have been laid for the second neokorate temple. Stefan Karwiese, "Der Numismatiker-Archäologe," *ÖJh* 56 (1985) Haupt. 105-8; Hermann Vetters, "Ephesos: Vorläufiger Grabungsbericht 1983," *AnzWien* 121 (1984) 210-11, Abb. 1.

Plate X. Overview of temple terrace from Mt. Pion, facing south.

on top of the 85.6 × 64.6 meter artificial terrace (Pl. X). The precinct was lined by stoas on three sides, leaving the north side open to the plaza and to the intersection of streets below. The front of the temple was near the center of the precinct, with its back approximately twenty meters from the precinct's west end.⁵⁵

⁵⁵ Fritz Eichler, "Die österreichischen Ausgrabungen in Ephesos im Jahre 1961," *AnzWien* 99 (1962) 47-48.

In the middle of the east end of the precinct was a U-shaped platform for an altar. The platform's east-west axis aligned with the temple and its north-south axis with the monumental entrance on the north side of the precincts. The altar's platform measured about 9 meters square, but only about half of the foundations and some of the orthostats have survived.⁵⁶ A flight of steps would have ascended on the open west side that faced the temple⁵⁷ to a raised platform where an altar would have stood.⁵⁸

The layout of the temple precincts draws on Hellenistic traditions from western Asia Minor in several ways. First, the temple was built in a Greek style rather than in an Italian style. Instead of a high podium temple near the back wall of the precincts with one flight of steps in front, the temple of the Sebastoi was placed closer to the center of the precincts and had monumental steps on all sides. Italian temples were not unknown to the builders, for the double cella temple in the Italian style that was probably devoted to the cult of Rome and Divus Julius occupied a small courtyard on the north side of the Ephesian upper agora (Fig. 1-2). A Greek design was considered more appropriate for the Temple of the Sebastoi.⁵⁹

⁵⁶ Three friezes that once decorated the external faces of the altar orthostats were found in the 1930 campaign. The workmanship is very poor and they do not seem to have been part of the original building phase. Keil (*ÖJh* 27 [1930] Beib. 57) dated them to the early third century CE; Alzinger (*ANRW* 2.7.2 [1980] 820) noted that the style of the ornamentation could not be earlier than the mid-second century CE. Because the concern of this chapter is in the religious imagery used in this cult's institutions in the late first century CE, these altar reliefs will not be included in the analysis.

⁵⁷ Anton Bammer proposed a reconstruction that oriented the altar not toward the temple but toward the monumental entrance to the north. He also suggested that the colossal statue stood or sat above the monumental entrance. "Römische und byzantinische Architektur," *ÖJh* 50 (1972-75) Beib. 386-92; "Wo einst ein Weltwunder stand," *Das Altertum* 21 (1975) 33-34. His interpretations of the archaeological remains have not found wide acceptance. See above, n. 44.

⁵⁸ Wilhelm Alzinger, "Ephesos. B. Archäologischer Teil," *PWSup* 12 (1970) 1649.

⁵⁹ A previously unidentified temple on a coin from Smyrna (Mionnet 6.319 #1564) probably depicts the Temple of the Sebastoi. On the obverse is a woman who was incorrectly identified as a hitherto unknown "Demeter Horia" by A. v. Sallet ("Demeter Horia auf Münzen von Smyrna," *ZfN* 4 [1877] 315-17). B. Pick corrected the error ("Die tempeltragenden Gottheiten und die Darstellung der Neokorie auf den Münzen," *ÖJh* 7 [1904] Haupt. 2). The woman is Asia personified, for the obverse inscription reads: Δομιτιανῷ Καίσαρι Σεβαστῷ Ζμυρνναῖοι Ἀσίαν, "the Smyrnians (dedicated) Asia to Domitian Caesar Sebastos [assuming a verb such as καθέρωσαν]." The reverse carries an image of a temple surrounded by the words: Ἐπὶ Λουκίου Μεστρίου Φλώρου Ἀνθυπάτου, "When Lucius Mestrius

Second, the floorplan of the temple itself was modeled on traditional forms from Asia. The pseudodipteral style was often said to have been developed by Hermogenes of Teos,⁶⁰ and the premier example of his work was the second century BCE temple of Artemis Leukophryene at Magnesia on the Meander.⁶¹ While Hermogenes did not create the pseudodipteral style, his widely-accepted codification of the design is reflected in the Temple of the Sebastoi.⁶²

Finally, the U-shaped altar platform was a common feature associated with major temples in Asia. For example, it was used in the Artemision at Ephesus, the temple of Artemis at Sardis, the temple of Athena in Priene, and the temple of Artemis Leukophryene at Magnesia on the Meander. The form was also found on a grander scale in the great altar of Zeus and Athena on the Pergamene akropolis.

The construction of the temple terrace for the Cult of the Sebastoi significantly affected this central area of the city of Ephesus. The impact is difficult to assess precisely because our knowledge of that area

Florus was proconsul [i.e., 88/89].” This is an unusual coin: the obverse has Asia rather than the emperor; the emperor is mentioned in the dative and Asia in the accusative; and a temple seems to provide the occasion for the design. The only reason for Smyrna to mint such a coin in honor of a temple dedication that involves Asia in the year 88/89 CE would be the inauguration of the Temple of the Sebastoi. This was not realized before because the temple was not precisely dated. Unfortunately, the coin is not a reliable source for details of the temple architecture (Martin Jessop Price and Bluma L. Trell, *Coins and their Cities* [Detroit: Wayne State University Press, 1977] 32 fig. 326 for a plate showing the reverse with the temple image). The temple on the coin is octastyle with six steps, but it is a podium temple with a statue on each parastasis. The statues have the pose one would expect for statues like that of Titus, but they are standing outside the temple. Since the temple terrace excavations uncovered evidence of a pseudodipteral design and since die-cutters occasionally needed to introduce inaccurate features in order to show temple statues, this coin should probably be considered to be an approximate representation of the Temple of the Sebastoi, executed by an artisan in Smyrna who probably did not intend to portray the temple accurately, or who did not have accurate information about actual appearance of the temple in Ephesus.

⁶⁰ Jerome J. Pollitt, *Art in the Hellenistic Age* (Cambridge: Cambridge University Press, 1986) 244-46.

⁶¹ Built ca. 150 BCE, the temple was pseudodipteral (8 × 15 columns) on a seven-step crepidoma. The pronaos was relatively larger than that of the temple of the Sebastoi with two columns *in antis*, front and back. Arnold W. Lawrence, *Greek Architecture* rev. R. A. Tomlinson (Pelican History of Art; New York: Penguin, 1983) 282-84.

⁶² Wilhelm Alzinger, “Ephesos vom Beginn der römischen Herrschaft in Kleinasien bis zum Ende der Principatszeit. B. Archäologischer Teil,” *ANRW* 2.7.2 (1980) 820.

of the city is incomplete. No systematic investigation has been undertaken yet in the areas south, west, or north of the terrace, and very little is known about the area covered by the terrace structures.

Some things, however, can be affirmed. The terrace was situated near the upper agora and not far from the main artery now known as "Curetes Street." Excavations in the general vicinity, such as those in the slope houses to the northwest of the terrace, have demonstrated that large dwellings of wealthy inhabitants lined the blocks surrounding Curetes St. The temple terrace for the Cult of the Sebastoi was built on valuable land in the city center.

In 1960 and 1961, some probes were carried out at points along the east side of the terrace to gather evidence about the history of this area. Small trenches were excavated in the shops at the bottom of the terrace's east side and one trench was dug across the street (now called "Domitiangasse") that runs up the slope between the terrace and the upper agora. These probes revealed an earlier street from the Augustan period following the same route at a level about 0.75 m. below the Domitianic paving. Under the shops near the terrace's southeast corner, parts of a pre-Roman wall were discovered that was once the east front of an unidentified building. Under the pre-Roman wall were smaller walls of individual dwellings. Another earlier wall was used as a foundation near the northeast corner of the terrace. In this area, early imperial pottery was found in the fill that supports the terrace. Below this was another layer of fill from the Hellenistic period.⁶³

The evidence gathered by these probes suggests that at least part of the terrace covered an area that had been a residential area in Hellenistic times. A larger building of some sort succeeded the houses, perhaps as a part of the Hellenistic terracing effort that is known from the fill. The street below Domitiangasse was paved in the Augustan period at which time there were already shops on the agora side. The street was repaved when the terrace was constructed during the reign of Domitian. Thus, the temple terrace seems to have constituted a major building project in an area that was already well-developed. It did not create a new district of the city, but rather redefined an existing one.

The construction of the terrace was part of a larger redevelopment

⁶³ Hermann Vetters, "Domitianterrasse und Domitiangasse," *ÖJh* 50 (1972-75) Beib. 323-30.

of the area. The new and remodeled shops, and the repaved Domitiangasse were discussed above. More significant were the changes below the northeast corner of the terrace. Here a large plaza was redesigned in relation to the temple. The plaza was paved, the Pollio Fountain (an Augustan period monument) was renovated and expanded,⁶⁴ and an apsidal monument was raised in the middle of the plaza.

The multi-leveled redevelopment of the area around the terrace appears to have been a part of the same plan that included the temple and its terrace.⁶⁵ The precincts were not closed off by adding a fourth stoa to the top of the terrace on the north side. The planners chose, rather, to create a precinct open on the long side toward the lower plaza. In so doing, they drew on Hellenistic precedents for creating dramatic contexts for religious architecture. The Asklepieion of Kos and the Athena Lindia precincts on the island of Rhodes are the aesthetic ancestors of the general layout of the area around the Temple of the Sebastoi in Ephesus.⁶⁶ The examples from Rhodes and Kos are more dramatic in their location, but the Cult of the Sebastoi is a reasonable translation of these same ideas into an urban context.

One important function of the plaza was the creation of free space in front of the terrace from which the viewer could see the open north side of the precinct and the terrace's north facade. The visual impact of this architectural setting was a crucial aspect of the whole complex.

The practical function of the temple terrace was to create a level area above the descending slope of Mt. Koressos. The distance between the top of the terrace and the ground level was greatest (10.4 m.) on the north side of the precincts by the plaza. At the level of the plaza, the entire length of the north terrace contained vaulted shops behind a colonnaded hall approximately 5 meters wide (Pl. IX). In front of the hall stood a three-story facade reaching to the top of the terrace. This north facade was broken only by a 4.3 meter wide monumental stairway (on axis with the temple's altar)

⁶⁴ See Anton Bammer, "Das Denkmal des C. Sextilius Pollio in Ephesos," *ÖJh* 51 (1976-77) Beib. 77-92; and idem, "Elemente flavisch-trajanischer Architekturfassaden aus Ephesos," *ÖJh* 52 (1978-80) Haupt. 67-81 for a detailed examination and reconstruction of the fountain.

Plate XI. Remains of stairway and stoa on north side of temple terrace opening onto plaza. Facing southwest.

a little over twenty meters from the northeast corner. The stairway provided the main access to the top of the terrace; at least one other entrance, at the southeast corner, is known.⁶⁷

The first story of the facade was executed in Doric half columns. Above the first story architrave was an area decorated with palmette, lotus, and rosette designs, that supported columns with engaged figures of deities along the length of the facade, interrupted only by the staircase entrance near the northeast corner. The Corinthian order may have been used for the third story.⁶⁸

Use of the figures on the columns of the north facade's second story is an unusual feature. Hilke Thür suggested that this feature indicates western influence, since analogous figured supports are found in Corinth (the Captives Facade) and in the Forum of Augustus in Rome.⁶⁹ The argument for western influence is not

⁶⁷ Vettors 1972-75, 311-15.

⁶⁹ Thür 1985, 184.

Plate XII. Engaged figures of Attis and Isis on facade of temple terrace stoa.

strong, though. The columns in the Forum of Augustus are not engaged figures but female figures serving as columns. Moreover, they are copies of the karyatids from the Erechtheum in Athens and show Athenian influence on Rome.⁷⁰ While the Captives Facade in Corinth is closer to the Ephesian example in style, it is dated to the late second century CE and therefore is much later than the Ephesian terrace facade. Furthermore, the Ephesian facade does not portray bound figures but standing deities.⁷¹

The two figures from the Ephesian column facade that have been recovered are both eastern deities: Attis and Isis (Pl. XII). This led Bammer to the conclusion that the entire facade contained eastern deities. He interpreted their appearance as an attempt by the emperor to coopt these “salvation religion” figures for imperial propaganda.⁷²

⁷⁰ John B. Ward-Perkins, *Roman Imperial Architecture* (Pelican History of Art; 2d integrated ed.; New York: Penguin, 1981) 25.

⁷¹ James Wiseman, “Corinth and Rome I: 228 B.C. – A.D. 267” *ANRW* 2.7.1 (1979) 525; Richard Stillwell, “The Facade of the Colossal Figures,” in idem, Robert L. Scranton, and Sarah Elizabeth Freeman, *Architecture* (Corinth 1,2; Cambridge, Mass.: Harvard University Press, 1941) 55-88.

⁷² Anton Bammer, *Architektur und Gesellschaft in der Antike* (2d ed.; Vienna:

The assumption that the emperor, or someone else in Rome, designed or approved the facade is groundless, though. There is no extant evidence for the assumption, and the architecture shows little Italian influence. Furthermore, the facade originally had 35-40 engaged figures, of which only two have been identified. It would not have been easy to find enough eastern deities with recognizable iconographies to use in the colonnade. It is more likely that the colonnade figures included gods and goddesses from east and west. But even if eastern deities were the only figures on the columns, the salvation religion interpretation is inadequate. It is based on a discredited interpretation of the role of religions in the imperial period that credited eastern traditions, and especially the mystery cults, with supplying the hope of salvation for individuals in an otherwise hopeless world.⁷³

More recently, Simon Price has tried to elucidate the significance of architecture and sculpture in a temple precinct as one way of defining the relationship of the emperors and the gods.⁷⁴ There are numerous examples from the Roman imperial period where statues of emperors have been placed in temples of other deities, or where a separate building has been dedicated to the emperors in the precincts of a temple. Price took the point made by Nock that an emperor rarely shared fully in a temple of a traditional god,⁷⁵ and enlarged upon it in a specific fashion. After careful examination of situations where the emperor or members of the imperial family were represented in the temple of a traditional god in Ephesus, Athens, Pergamum, Priene, Sardis, and elsewhere, Price noted that

there was generally concern to avoid elevating the emperor too high. His statues did not rival or displace those of the traditional deities.⁷⁶

Hermann Böhlaus Verlag, 1985) 124-25. Another weakness in his argument is his description of Isis and Attis as deities that appealed primarily to the lower classes. Both Ephesus and Pergamum built large, and therefore expensive, sanctuaries for the Egyptian gods in the second century CE.

⁷³ See Walter Burkert's *Ancient Mystery Cults* (Cambridge, Mass.: Harvard University Press, 1987) for a more recent interpretation; and, Jonathan Z. Smith, *Drudgery Divine: On the Comparison of Early Christianities and the Religions of Late Antiquity* (Chicago: University of Chicago Press, 1990) 116-143 for a critique of modern soteriological interpretations of ancient mystery cults.

⁷⁴ Price 1984b, esp. 146-56.

⁷⁵ A. D. Nock, "Σύνναος Θεός," *HSCP* 41 (1930) 1-62.

⁷⁶ Price 1984b, 147.

Thus, the evidence from the precincts where gods and emperors were present was interpreted as a deliberate attempt to classify the emperors in the divine category without equating them with the gods. This in turn became a crucial part of Price's larger argument that the imperial cult carefully distinguished the emperors from the gods.⁷⁷

The Temple of the Sebastoi in Ephesus, however, presents a problem for Price's theory. Why would the temple of the emperors tower above the ranks of the gods? Why would statues of the emperors be depicted so much larger than the gods? This apparent contradiction is generated by a mistaken premise that underlies Price's interpretation. The placement of the emperor in any given precinct should not be understood as a statement about the general status of emperors and gods. It is, instead, a much more modest statement about the emperor's place in that particular precinct which is dedicated to someone else. The question is not so much divine ontology as hospitality and protocol.

To put my point another way, it was not only unusual for emperors to share fully in the cult of a traditional god. It was also unusual for a god to share fully in the cult of another god. Greco-Roman religions included certain predictable combinations such as Asklepios and Hygeia, Isis and Sarapis, Demeter and Kore, or the Dioscuri. Other gods might be included in the cult in an exceptional instance, but they would seldom "share fully" in the cult.

It was not unusual to have statues of divinities in the precincts of another god. Large precincts or sanctuaries with important periodic festivals were often littered with statues of gods, humans, even animals. If Apollo was depicted in an Asklepieion with a smaller statue than that of his son, this was not a general statement about their relative status. It only indicated that the Asklepieion was dedicated to Asklepios. The implications of these suggestions for an understanding of the relationship of the gods to the emperors will be laid out in the concluding chapter. At present, the significance of the iconography of the temple precincts in Ephesus deserves more consideration.

In the case of the facade in front of the Temple of the Sebastoi at Ephesus, the symbolism was indeed related to the relative positions

⁷⁷ E.g., Price 1984b, 231-32.

of the gods and the emperors. The entire complex was not an attempt to articulate a comprehensive hierarchy of the divine world. Rather, we should take the position of a viewer standing on the plaza below the facade, who would have looked up to see a host of divine beings lined up across the length of the massive terrace. Behind this row of deities was the *temenos* of the Sebastoi. The message was clear: the gods and goddesses of the peoples supported the emperors; and, conversely, the cult of the emperors united the cultic systems, and the peoples, of the empire. The emperors were not a threat to the worship of the diverse deities of the empire; rather, the emperors joined the ranks of the divine and played their own particular role in that realm.

In this way, the architecture of the temple terrace communicated the same basic message implied by the neokoros imagery initiated for the Cult of the Sebastoi in Ephesus. In both instances, the emperors were associated with symbols from the upper realms of the pantheon. The city recognized the benefits received from the emperors and acknowledged its cultic responsibilities toward them. The argument that reverence for Artemis might crowd out reverence for the emperors that was used earlier in the century⁷⁸ was no longer persuasive in the late first century CE. The emperors and the (other) gods and goddesses each had their proper, complementary places in the life of the city, the province, and the empire.

This imagery, used to articulate the significance of the Cult of the Sebastoi, was not imposed from Rome. The concept of the neokoros city, the design of the temple, the sculptural figures, and the architectural program all originated in the Greek east. The symbolic systems employed in the cult show that the institutions were part of the Asian heritage. As such, the religious imagery reflected local values. The developments in the religious traditions of western Asia Minor that have been the subject of this chapter were conscious, creative transformations by participants in those traditions who sought to express a new situation using the received symbolic vocabulary.

⁷⁸ This claim about Ephesus was also made in the deliberations regarding the choice of a site for the provincial cult that was finally granted to Smyrna (26 CE), as well as the one founded in Miletus (40 CE). See above, chapter one.

CHAPTER FOUR

PROVINCIAL HIGHPRIESTHOODS

In chapter one, many of the known offices of three different provincial cults of Asia were examined. In chapters two and three, several offices related to the cult of the Sebastoi in Ephesus have already been mentioned. The goal of this chapter is to describe in detail the priesthoods of Asia's Cult of the Sebastoi in Ephesus, and to discuss the issue of whether Asiarchs were related to provincial imperial cult.

The parameters of the scholarly discussion of these offices have been relatively stable since the early years of this century. Occasional refinements have been suggested or deviations proposed, but little attempt has been made to reevaluate the topic systematically in the light of the growing body of archaeological data.

One of the reasons that the discussion has progressed so little is that tentative conclusions about one office are frequently used as evidence to support conclusions about other offices. For this reason, this chapter will deal with each office separately, making every attempt to assess the data on its own merits, and will examine the interpretations of prominent, representative scholars.

One other problem has plagued the scholarly debates. Because the available evidence is not complete, interpreters often seek far and wide across the Roman Empire for analogous situations. Often, decisions about a specific issue are made on the basis of an inscription or coin from a distant province. While it is true that the evidence for the province of Asia is not complete, there are nevertheless hundreds of sources pertinent to the question of sacerdotal offices in Asia. Evidence from the province of Asia must be given priority; the significance of data from another province must be carefully evaluated, for there is no reason to think that the provinces were uniform either in governance or religiosity.

It would be impossible to cite all the coins and inscriptions that provide the evidence for this discussion. The reader may consult Appendix I where the known epigraphic and numismatic references to provincial highpriests, highpriestesses, and to Asiarchs are listed.

The attestations are arranged in chronological order with personal names, complete titles, and bibliographic information. An index to the appendix has also been provided.

Provincial Highpriests

The provincial highpriests were leading figures in the affairs of the province. They often appear in inscribed texts of koinon documents, as well as in other inscriptions from many cities. In fact, extant coins and inscriptions contain over 140 references to highpriests of Asia.

In spite of this abundance of data, there has been no agreement on the number of provincial highpriests in Asia at a given time. Late in the nineteenth century, a general scholarly consensus seemed to be forming, of which William Ramsay was a representative. He argued that there was only one highpriest of the province (ἀρχιερεὺς Ἀσίας) but this highpriest of Asia had several deputies, each of whom was called a “highpriest of the temple(s) in (a given city):” ἀρχιερεὺς ναῶν τῶν ἐν κτλ. These deputies were appointed to service the provincial temples in the various cities and formed a sacerdotal hierarchy within the province.¹

Magie challenged this position, which he characterized as “the generally accepted view.”² He argued that the phrases “highpriest of Asia” and “highpriest of the temple(s) in (a given city)” were variants of the same title for the same office. According to Magie, there was only one such highpriest in the province of Asia at any given time. The references to cities in the titles of highpriests did not indicate a plurality of highpriests. Rather, the naming of cities in the titles were determined by the location of the koinon’s meeting during that highpriest’s tenure in office.³

In order to evaluate Magie’s position, we need to consider the number of known highpriests in relationship to the total number of highpriestly terms of office during the approximately three centuries of Asia’s provincial cult for Roman emperors. Approximately

¹ “The distinction between the titles...is clearly drawn, and is of course known to all accurate writers,” according to William Ramsay, “The Province of Asia” *ClRev* 3 (1889) 175. See also Victor Chapot, *La province romaine proconsulaire d’Asie* (Paris: Emile Bouillon, 1904) 470.

² David Magie, *Roman Rule in Asia Minor* (Princeton: Princeton University Press, 1950) 2.1297-98 n. 59.

³ Magie 1950, 2:1297-98 n. 59.

eighty different names of provincial highpriests are known from the coins and inscriptions of Asia and its environs, and a few of these served more than one term. In addition, there are eighteen other references to highpriests of Asia for which no name has been recorded.⁴ If Magie's view is correct, there were only about 320 highpriestly terms of office in Asia between the establishment of the first provincial cult in Pergamum in 29 BCE and the reforms of Diocletian which apparently entailed the demise of the *koinon* of Asia as well as those of other provinces.⁵ This would mean that an extraordinarily high number of the highpriestly terms of office (about one third of them) is preserved in the archaeological record.⁶

Therefore, Magie's position is extremely unlikely. Although he demonstrated successfully that the titles "highpriest of Asia" and "highpriest of Asia of the temple in . . ." referred to the same kind of official,⁷ this does not mean there was only one such official in the province at any given time.⁸ Indeed, if there was only one highpriest in Asia, there would have been no reason to mention a relationship to a specific temple.⁹ Furthermore, an inscription from Magnesia on the Meander that mentions two men who had been designated as provincial highpriests—οἱ ἀποδεδιγμένοι τῆς Ἀσίας ἀρχιερεῖς—would be inexplicable if only one official was elected per year.¹⁰

⁴ Some of these could be references to highpriests whose names are known from the other attestations, but the possibility of such a coincidence does not affect the argument. Also, some of the references to unnamed provincial highpriests do not mention individuals, but rather groups of relatives, all of whom held this office.

⁵ Jürgen Deininger, *Die Provinziallandtage der römischen Kaiserzeit* (Vestigia 6; Munich: Beck, 1965) 182-83.

⁶ The inclusion of highpriestesses in this number would be appropriate and would bring the ratio to about 45%. It must first be demonstrated, however, that "highpriestess" was not simply an honorary title without sacerdotal responsibilities (see below, p. 81-89).

⁷ The inscription related to the provincial cult of Gaius in Miletus (text given above, p. 22) confirms Magie's position on this point. That inscription is dated by the service of Gaius Vergilius Capito as highpriest of the temple in Miletus, which is called his third highpriesthood of Asia. The text of the inscription assumes the equivalence of the two titles.

⁸ Magie 1950, 2:1297-98 n. 59.

⁹ Magie's suggestion that the official title would sometimes include the name of the town where the *koinon* met that year is unconvincing (1950, 2:1297-98 n. 59). The longer title does not refer to a meeting of the *koinon*, but rather to the location of certain provincial temples. A sole highpriest for Asia would have been in charge of all the province's temples, not just those in one city.

¹⁰ *IuMag* 157b. Deininger 1965, 39.

Deininger assessed the situation more accurately in this respect.¹¹ He maintained that when provincial temples proliferated in Asia beginning in 26 CE, a provincial highpriest was appointed for each temple. Thus, every city that had a provincial cult also had an annually elected highpriest.¹² Beginning in the second century CE, some cities acquired second and third provincial cults.¹³ In these cases, one highpriest served for all the provincial cults in that city,¹⁴ for only one highpriest was necessary in a city. Finally, he argued that the highpriests of Asia were not arranged in a hierarchy but were of equal status.¹⁵

One assumption about provincial highpriests that has been shared by all commentators needs to be questioned at this point, namely, the idea that the highpriest of Asia's first provincial cult was always known either as ἀρχιερεὺς θεᾶς Ῥώμης καὶ Αὐτοκράτορος Καίσαρος θεοῦ υἱοῦ Σεβαστοῦ or as ἀρχιερεὺς Ἀσίας.¹⁶ Careful examination of koinon inscriptions, honorary decrees, and coins shows that

¹¹ Jürgen Deininger (1965, 39 and n. 10) does not, however, indicate an awareness that he is in disagreement with Magie's position on the number of highpriests in a province.

¹² A provincial highpriest did not need to be a native of the city in which he served. A series of inscriptions from 4-2 BCE on one stone found in Sardis (*Sardis* 7.8 = *IGR* 4.1756) gives several examples of highpriests from the cult of Rome and Augustus in Pergamum who come from various cities.

¹³ Margaret Rossner ("Asiarchen und Archiereis," *Studii clasice* 16 [1974] 111) noted that only five cities in Asia (Pergamum, Smyrna, Ephesus, Kyzikos, and Sardis) are recorded in the title "highpriest of Asia of the temples in (a given city)," even though several other cities are known to have had provincial cults. She suggested that the number of provincial highpriesthoods may have stabilized at five, one for each of these cities, by the mid-second century CE even though other provincial cults were established. It is more likely, though not demonstrable, that more than five cities had such highpriesthoods which are not attested due to the accidents of preservation and discovery. Using only the five cities known from this type of provincial highpriesthood title, we can calculate that the province had a total of approximately 1100 highpriestly terms of office during the imperial period. The extant attestations of provincial highpriests and highpriestesses would comprise less than 10% of this total, making omissions of other cities quite possible. If other cities also had highpriesthoods (as seems more likely), the total number of highpriestly terms of office for the province would go up, the extant attestations would be an even smaller percentage of this total, and omissions would be even more probable.

¹⁵ Deininger 1965, 18, 37-41.

¹⁶ E.g., Paul Guiraud, *Les assemblées provinciales dans l'empire romain* (Paris: Imprimerie Nationale, 1887) 82, and n. 1; Magie 1950, 2.1297 n. 59; Deininger 1965, 37-41; W. G. Buckler, "Auguste, Zeus Patrôos," *RevPhil* 3d series, 9 (1935) 177. Buckler argued, however, for a more complicated chronology of the development of the Rome and Augustus title.

this was not the case. Asia's first provincial highpriesthood was not known as the "highpriest of Asia" until sometime after Augustus. The reason for the confusion in the scholarly literature is that references to this highpriest in koinon inscriptions sometimes referred simply to the ἀρχιερεὺς and modern scholars have assumed that this was an abbreviated form of ἀρχιερεὺς Ἀσίας. The title ἀρχιερεὺς Ἀσίας, however, never appears in our sources in reference to the highpriest of the provincial cult in Pergamum until the late first century or early second century CE.¹⁷ Before this time, he was known only as the ἀρχιερεὺς θεᾶς Ῥώμης καὶ Αὐτοκράτορος Καίσαρος θεοῦ υἱοῦ Σεβαστοῦ or the ἀρχιερεὺς in contexts where the referent was understood.

In fact, the title ἀρχιερεὺς Ἀσίας seems to have come into use only in the second quarter of the first century CE. The first known usage of the term comes from the year 40 CE when it appears in the Miletus inscription related to the abortive cult for Gaius in that city.¹⁸ In the inscription, Gaius Vergilius Capito is said to be serving as the ἀρχιερεὺς Ἀσίας for the third time, so the title was probably in use before this date for at least a few years.¹⁹ The title appears next in 41 CE in an inscription from Hypaipa,²⁰ then in two other inscriptions between the years 41 and 68.²¹

The significance of this chronology lies in the observation that the title ἀρχιερεὺς Ἀσίας came into use only after the establishment of Asia's second provincial cult in Smyrna in 26 CE. Highpriest of Asia became the title of any provincial highpriest, and by the end of the first century CE it had replaced the earlier title "highpriest of Rome and Augustus" for the cult in Pergamum.²²

¹⁷ *IGR* 4.1239; see also the fragmentary inscription *IvE* 4.1393. *IvE* 7.2.3801 (perhaps Tiberian or Claudian period) might use the phrase ἀρχιερέως τῆς Ἀσίας but the title is almost completely reconstructed in a lacuna.

¹⁸ Louis Robert, "Le culte de Caligula a Milet et la province d'Asie," *Hellenica* 7 (1949) 206-7. See above, p. 21-26.

¹⁹ There is no reason to believe that the inscription uses the title anachronistically for the two earlier terms of office.

²⁰ *IvE* 7.2.3801 II.

²¹ *IvMag* 157b; *MAMA* 6.104. There is also one reference in *IGR* 4.1524 to a highpriest of Asia of the temple in Smyrna that could be dated any time during the period when Smyrna had one provincial cult, i.e., 26-120 CE. "Highpriest of Asia" is attested also on coins of Eumeneia from the Domitianic period (*CollWadd* 6034; *BM Phrygia* 218, #48) and in an inscription from Phokaia (*IGR* 4.1323) in the period 85-130 CE.

²² *IGR* 4.1239; 1639; 577.

The shift in title reflects a change in focus from the specific object of one cult (Rome and Augustus) to the growing institution of provincial worship in Asia. After the Rome and Augustus cult of 29 BCE,²³ no other provincial highpriesthood in Asia was named for an individual emperor without including other individuals.²⁴ What started as an office whose title emphasized the objects of pious activity (i.e., Rome and one particular emperor) became one of several offices entrusted with the task of expressing the province's reverence for imperial authority.²⁵

In this way, the multiplication of provincial cults gradually gave rise to a category of provincial offices that could be held by an ever greater number of citizens from the wealthier stratum of inhabitants in the cities of Asia. This category began as a fairly restricted option (one highpriest of Rome and Augustus annually), but over time it included quite a few wealthy inhabitants of Asia who could serve the province as one of many highpriests of Asia in the cults of the emperors.

Provincial Highpriestesses

Appendix 1 contains 42 attestations of provincial highpriestesses of Asia from the published coins and inscriptions of western Asia Minor, including the names of 29 different women. Nearly all studies touching upon these references have concluded that some or all of the known highpriestesses from Asia received the title as an honorific designation on the basis of their husband's highpriesthood.

E. Beurlier's doctoral thesis was an early monograph on imperial cult.²⁶ He accepted Marquardt's interpretation of provincial highpriestesses, i.e., that the institution was inaugurated when the first

²³ The cult must have been for Rome and "Octavian" before 27 BCE. See above, chapter one.

²⁴ One possible exception is the fragmentary inscription (*IvE* 4.1404) that mentions a highpriest of Tiberius. It is not clear whether this inscription refers to a provincial cult (i.e., the one in Smyrna). In any case, a highpriesthood of Tiberius would still conform to the developments being outlined here.

²⁵ This post-Augustan tendency of not naming highpriesthoods for specific emperors was observed by Brandis for local imperial cults (*PW* 2 [1896] 479-81). It also fits the general pattern of developments in imperial cults in Asia Minor noted by S. R. F. Price (1984b, 57-59, 245-48).

²⁶ E. Beurlier, *Essai sur le culte rendu aux empereurs romains* (Paris: Ernest Thorin, 1890).

woman of the imperial house was divinized.²⁷ Beurlier maintained that highpriestesses held the office by virtue of being married to a provincial highpriest, and that they functioned as highpriestesses of imperial women. This explained why the highpriestess was also subject to certain purity requirements and given certain privileges because of her husband's office.²⁸

One year after Beurlier's study was published, P. Paris's work on women in public office appeared. After examining a variety of different ways that women were involved in public life in Asia, Paris took Mommsen's suggestion and concluded that highpriestesses were probably wives of highpriests. The husbands did the governmental business entailed by the highpriesthood while the wives concentrated on activities considered acceptable for women, such as those of the *agonothetis* in the provincial games.²⁹

Five years after Beurlier, Brandis took a minority position but he did not elaborate on it. In a brief statement on highpriestesses (the first half of the last sentence in his article "Archiereus") he mentioned that women could participate in all forms of highpriesthoods alone or with their husbands.³⁰ Chapot approved of Brandis's position, devoting a small paragraph to provincial highpriestesses.³¹ Three years later, Toutain published his analysis of scholars like Beurlier who excluded women from sacerdotal functions in the provincial cults. Although he did not want to go beyond what he understood the ancient sources to say, Toutain strongly suggested that the best interpretation was that women functioned as highpriestesses in the provincial cults of the emperors.³²

The view that provincial highpriestesses were not functioning but rather honorary officials has been accepted in the major studies that

deal with the issue in the last half of the twentieth century.³³ Magie accepted this conclusion and even though he gathered together a list of known provincial highpriestesses in an appendix,³⁴ there is surprisingly little discussion of highpriestesses in his work. He was content simply to state that "the Chief Priest's [his preferred translation of ἀρχιερεύς] wife enjoyed the privilege of being called Chief Priestess."³⁵

Deininger hesitated because of the nature of the sources, but came to the same conclusion as Magie. His two paragraphs on provincial highpriestesses are instructive because they illustrate that the highpriestess question has not been answered so much by an analysis of the data but by assumptions about the nature of the office. Only two important primary documents are cited in Deininger's discussion. One is the *lex Narbonensis*, which records the rules regarding contemporary and former highpriests of the province of Narbonensis.³⁶ It should be noted that this inscription is undated and does not come from Asia, nor even from the eastern Mediterranean. Furthermore, the text never mentions a highpriestess (*flaminica*), while the only reference to a highpriest's wife is in a restored lacuna.³⁷ The only way that this text can be used to support the honorary highpriestess theory is if one has already assumed that a highpriestess is the wife of a highpriest.

The second piece of primary evidence cited by Deininger is an inscription from Baetica (southern Spain) which names a certain Quintia M. f. Flaccina as a provincial priestess of the divinized imperial women (*in honorem et memoriam Quintiae M. f. Flaccinae Munig(uensi), flaminic(ae) divar(um) Aug(ustarum) splend(idissimae) provinc(iae) Baetic(ae)*).³⁸ Such an inscription is certainly a valuable document, but it hardly demonstrates the nature of the office of highpriestess for other provinces of the Roman Empire. On the contrary, it seems that the provincial cult of Baetica in Munigua had an eccentric

format in which the imperial cult had joined a cult of Fortuna and/or Hercules.³⁹

The problem, then, is not primarily the data at our disposal but rather the questions that have been tested in the light of the data. Throughout Deininger's discussion of highpriestesses, he does not ask what the nature of the office of highpriestess was, but rather whether highpriestesses were married to highpriests.⁴⁰ Not only is this the wrong question to ask, it is a question that cannot be answered in most cases, and so he was led to introduce the peculiar argument that no highpriestess could be proven not to have been married to a highpriest.⁴¹ Rossner repeated this argument as though it were convincing;⁴² MacMullen simply accepted the conclusion.⁴³

The prevailing view was challenged by Kearsley in 1986.⁴⁴ She questioned the accepted interpretative framework by pointing out that the concept of honorary priesthoods is incongruent with the practices of other Greek cults, and even with local imperial cults. She then undertook a study of 15 highpriestesses from Ephesus that allowed her to show that the honorary highpriestess theory does not conform to the data from Asia. Among the specific problems with the general consensus, she cited differences between the titles of husbands and wives, women listed with no references to husbands or fathers, and highpriestesses whose husbands were known not to have held highpriesthoods. The strength of these arguments varies from case to case,⁴⁵ but their combined force is convincing. It

⁴¹ Deininger 1965, 41, 154.

⁴² Rossner 1974, 102.

⁴³ "It is generally agreed that incumbents held the title high-priestess not in their own right but as wives of those high-priests who happened to be married." Ramsay MacMullen, "Woman in Public in the Roman Empire," *Historia* 29 (1980) 214.

⁴⁴ Rosalinde Kearsley, "Asiarchs, *Archiereis*, and the *Archiereiai* of Asia," *GRBS* 27 (1986) 183-92.

⁴⁵ The argument based on the absence of titles for husbands or wives is particularly difficult. There are several instances where a wife's provincial highpriesthood is recorded while her husband is not called a highpriest, or where a husband is a highpriest of Asia and the wife has no titles. While the frequency of this phenomenon is suggestive, the absence of titles in a particular inscription is still tenuous support for any conclusion. For example, an inscription from Phokaia (*IGR* 4.1325)

seems that most scholars have assumed that women were not functional highpriestesses in the provincial cult of Asia without giving the evidence appropriate consideration.

The other example of this particular phenomenon can be found in the modern interpretation of Jewish women's leadership titles from antiquity, and Brooten's conclusions about so-called honorific titles of the synagogues can be appropriated for Asia's highpriestesses as well.⁴⁶ There is actually no evidence for women taking their husband's titles in the provincial imperial cult of Asia. Even if such titles had been gained by some through marriage, this would not necessarily mean that all women had received their titles in this way, nor would it mean that highpriestesses had no cultic responsibilities.⁴⁷

It is not generally recognized that an inscription from Magnesia on the Meander provides a fairly precise date at which highpriestesses became a part of the imperial cults of the province of Asia.

2 Ἡ βουλὴ [καὶ ὁ δῆμος ἐτέμηνσαν]

honored the provincial highpriestess Flavia Ammion Aristion and mentioned her husband without any of his titles, even though he is known from a different inscription (*IGR* 4.1323) to have served as highpriest of Asia of the temple in Ephesus.

⁴⁶ Bernadette J. Brooten, *Women Leaders in the Ancient Synagogue. Inscriptional Evidence and Background Issues* (Brown Judaic Studies 36; Chico, California: Scholars Press, 1982), esp. "Excursus: What is an Honorific Title?" p. 7-10.

⁴⁷ A crucial element in most arguments for honorific highpriestesses has been the equation of "provincial highpriest" with "Asiarch." Since the two titles have usually been considered to be equivalent, and since highpriestesses appeared both as wives of Asiarchs and wives of provincial highpriests, the designation "highpriestess" seemed to be simply a courtesy accorded to these women. The issue of the responsibilities of Asiarchs is discussed below, beginning on p. 92.

⁴⁸ *IvMag* 158.

The boule and the demos honored Juliane—daughter of Eustratos (?) son of Phanostratos (?), wife of Alkiphronos the highpriest of Asia, (who) was the first among women (to serve as) highpriestess of Asia, stephanephoros, gymnasiarch, priestess for life (?) of Aphrodite and of the goddess Agrippina the mother, and priestess for life of Demeter in Ephesus—because of all (her) excellence.

The inscription, which honors the prominent benefactor and priestess Juliane, has several problems connected with it that require discussion. The first is that the marble plate upon which the inscription was made disappeared in November, 1893, so it is no longer available for inspection. Kern's publication of the text was made on the basis of a reevaluation of a squeeze of the inscription as well as the transcription that had been revised several times. The inscription was also damaged before it was found by archaeologists. The lacunae that make the text difficult to read are mostly due to two vertical grooves that were caused by a secondary reuse of the stone.⁴⁹

Several portions of the text have been reconstructed that bear on the nature of Juliane's service as provincial highpriestess. The suggested reading for the end of line five, the participle γε[νομένην], is probably correct. The presence of γε in the middle of the phrase "highpriestess of Asia" would be difficult to understand as part of any other word, and there are good epigraphic parallels for this participle; e.g., the text from Ephesus honoring Claudia Ammion γενομένην ἀρχιέρειαν τῆς Ἀσίας ("who was highpriestess of Asia").⁵⁰

Another lacuna is crucial to the interpretation of the inscription: the word "women" in line six is completely reconstructed. The inscriptions of Magnesia do not record any titles including the phrase "first among. . ." that might confirm this reading or provide alternative proposals. The phrase might have read [πρ]ώτην τῶ[ν Ἑλλήνων] ("first among the Magnesians"), though there are no parallels for this title either; or perhaps [πρ]ώτην τῶ[ν Ἑλλήνων] ("first among the Hellenes").⁵¹ It is unlikely that the text named her first among the highpriests or highpriestesses for there is no other indication in the archaeological record of a ranking of these officials. The title "first of the city" was used in some places,⁵² but

⁴⁹ *IvMag* 158.

⁵⁰ *IvE* 3.681.

⁵¹ *IGR* 4.1226 (Thyatira).

⁵² *IGR* 4.652 (Akmonia), 666 (Diokleia), 888 (Themisonion).

the word τῶ[ν] requires a plural noun rather than a singular. Thus, on the basis of available alternatives, "first among women" is a plausible, but not necessary, reading.

Some progress can be made if the meaning of the phrase is examined. The phrase "first among. . ." can stand alone as a title of status, but it would be quite unusual to find such a title between the offices held by an individual who was being honored. Appellations such as "first of the city" normally were placed at the end of a list of achievements,⁵³ and sometimes at the beginning,⁵⁴ but not in the middle of the offices. Since the phrase is found among offices in the Juliane inscription, it should be reconstructed as part of a larger unit and not as a separate title of honor.

The word πρώτην could be taken to mean temporal primacy (i.e., the first to do something), or it could simply indicate rank. Because "first" occurs in the title section and is not part of a title such as "first archon,"⁵⁵ it probably does not indicate rank. While temporal primacy can be rendered with the adverb πρώτως plus a participle as in the inscription about the cult for Gaius in Miletus,⁵⁶ the adjective πρώτος can serve the same function. An inscription from Magnesia of the Augustan period that lists the victories of the athlete Demokrates uses this sort of construction in noting that he was the first person in the world to win the boxing competition at Olympia three times: [...πυγμὴν πρῶτον τῶ[ν] ἀπὸ τῆς οἰ[κου]μένης Ὀλ[ύμπια] τρίς.⁵⁷ The Metrobius inscription from Iasos similarly commemorates a world's record with the phrase νικήσας . . . πρῶτος ἀνθρώπων.⁵⁸

All of this suggests that "the first among women to serve as high-priestess of Asia" is the best way to translate the Juliane inscription, but it does not prove the reconstruction beyond doubt. Confirmation of this reading comes from an independent source. The fortuitous title "priestess of Agrippina the mother" allows the inscription to be dated with a fair amount of precision, for a priesthood of Nero's mother Agrippina would only be possible between his acces-

⁵⁸ *IvI* 1.107.

sion in 54 CE and the time he had her assassinated (59 CE).⁵⁹ The date of Juliane's provincial highpriesthood is not specified but it was probably in the forties or fifties of the first century CE.⁶⁰ Thus, when the forty-two attestations of provincial highpriestesses in Asia are arranged chronologically, Juliane appears at the beginning of the list as the first woman known to have held a provincial highpriesthood in Asia. Thus, the known dates of other highpriestesses of Asia support the reconstructed text of the Juliane inscription.⁶¹

One can only speculate as to why the decision was made to include women in the provincial highpriesthoods around the second quarter of the first century CE, for the present state of research about women's history in the province of Asia is not far enough advanced to give us purchase on this problem. The existence of two provincial cults increased the need for highpriestly candidates but this larger need probably played little part in the decision. The archaeological record does not indicate an abnormally high number of women in the office in the last half of the first century CE, which is what one would expect if the participation of women were due to a shortage of male candidates. Another possibility is that the long-postponed deification of Livia in 41 CE⁶² occasioned the unprecedented appointment of a provincial highpriestess, since there seems to have

⁵⁹ The editor of the inscription in *IvMag* questioned the reading διὰ βίου in l. 9, and the word ἱερεῖαν in l. 8, but offered no alternatives. In spite of the lacunae, the reference to Agrippina appears to be reliable.

⁶⁰ She was perhaps highpriestess of the cult in Smyrna (for Tiberius, Livia, and the Senate). Smyrna is closer than Pergamum to the other locations known from the geographical information about her activities: she was priestess for life of a Demeter cult in Ephesus; and the inscription which mentions her provincial highpriesthood was found in Magnesia on the Meander (less than 20 kilometers southeast of Ephesus). Furthermore, it is not clear whether a highpriestess of the provincial cult of Rome and Augustus in Pergamum would have been referred to as an *archiereia Asias* at this date.

⁶¹ Magie (1950, 1.449) interpreted this inscription as a reference to the beginning of honorific highpriesthoods for women, even though there is no indication in the text itself that an honorific title is involved. Kearsley took the participle as an indication that Juliane served as highpriestess of Asia before her husband was highpriest of Asia ("Asiarchs," 190-91), rather than as a part of the phrase meaning "who was first among women. . ." Kearsley's interpretation, however, does not explain the significance of the phrase [πρ]ώτην τῶν γυναικῶν in line 6, which was replaced by κτλ. in text of the inscription given in her article.

⁶² Livia, wife of Augustus, died in 29, but her son Tiberius was not anxious to promote her deification. The emperor Claudius, her grandson (through Drusus rather than through Tiberius), finally saw that she was enrolled among the gods.

been a larger percentage of priestesses and highpriestesses in the cults dedicated to women of the imperial house.

Whatever the reason may have been, it is clear that a significant development took place in the second quarter of the first century CE. A previously all-male provincial highpriesthood of the emperors became accessible to women, perhaps for the first time in any Roman province.

Responsibilities of the Highpriesthood

What did provincial highpriests and highpriestesses do? Deininger's study of provincial councils in the Imperial period includes the most detailed examination of the organization of the koinon of Asia and his opinion has formed the basis of much that is written about provincial highpriesthoods.⁶³ He wrote, "The ἀρχιερεύς appears in all official documents of the koinon during the first century [CE] as its spokesman (*Wortführer*) and chairman (*Vorsitzender*)."⁶⁴ Deininger also cited the example of all the other provincial councils as support for the leading role of the highpriest,⁶⁵ but the reader searches in vain for one clear reference to a council being led by a highpriest. No one has systematically argued this point. In place of an argument, the frequent occurrence of this official in the documents related to Asia's koinon is cited as an indication that he was obviously the koinon's leading official.

Do the koinon documents of the early Imperial period support the view that the highpriest was the highest official in the koinon? The highpriest of Rome and Augustus appears most often in the role of the one who proposed honorary decrees for individuals.⁶⁶ This nor-

⁶³ See, for example, Fergus Millar, *The Emperor and the Roman World (31 BC – AD 337)* (Ithaca, N. Y.: Cornell University Press, 1977) 387.

⁶⁴ Deininger 1965, 18: "Der ἀρχιερεύς erscheint in allen amtlichen Dokumenten des Koinon während des 1. Jahrhunderts als sein Wortführer und Vorsitzender." (My translation). Buckler's article (above, p. 79, n. 16) is listed in Deininger's n. 5 as support for this idea, but the article does not deal with this issue. In fact, Deininger assumes that all the provincial councils were organized in this way and then uses this assumption to fill in the information which is missing for so many of the councils (see his comments on Bithynia [60-61], Kappadokia [82], Kilikia [83], or Krete [84-85]). The assumption that all or most of the councils were organized in a uniform manner is itself difficult to maintain (*ibid.*, 69-73 [Lycia]).

⁶⁵ Deininger 1965, 38.

⁶⁶ For example, *IvPr* 105; *IvE* 7,2.3825 (Hypaipa).

mally followed the formulaic opening statement that the inscription contained a decision of the Greeks in Asia.⁶⁷ The highpriest was also instructed in some cases to have these decisions inscribed in marble and displayed in certain places.⁶⁸ Other instances are known where the highpriest was the author of correspondence from the koinon to a city.⁶⁹

These examples show that the highpriest of Rome and Augustus was normally an important member of the koinon. They do not, however, show that this highpriest was the highest official in the koinon. The prominence of the highpriest in these inscriptions could simply indicate that this λειτουργία included the responsibility of paying for inscribed documents of the koinon that were normally set up in the precincts of imperial cult temples.

The history of the provincial koinon does not require that the highest office be that of a highpriest. The koinon of Asia was functioning already in the late Republican period with no mention of a highpriest or sacerdotal office.⁷⁰ Other offices of the koinon are attested in the Imperial period. Why should the highpriest of Rome and Augustus be considered to have had the premier position in a list of other offices that included lawyers (ἐκδικος, συνδικήσας), financial overseers (ἀργυροταμίας τῆς Ἀσίας, οἰκονόμος Ἀσίας), and a secretary (γραμματεὺς)?⁷¹

A further problem with the attempt to make the highpriest of Rome and Augustus into the head of the koinon is that such interpretations do not take into account the growing number of provincial highpriesthoods in the first and second centuries CE. When there was more than one highpriesthood in Asia, who would have been in charge of the koinon? If the highpriest of Rome and Augustus was actually the chairman of the koinon, then one would expect some distinction to be made between his office and the other highpriesthoods. We have already seen, though, that the opposite is true. As the ranks of ἀρχιερεῖς Ἀσίας swelled, the highpriesthood of Rome and Augustus came to be viewed as one of several provincial highpriesthoods, all designated simply “of Asia.”

⁶⁷ Ἔδοξεν τοῖς ἐπὶ τῆς Ἀσίας Ἑλλήσιν.

⁶⁸ See *IBM* 894 (Halikarnassos).

⁶⁹ *Sardis* 7.8 VII and VIII.

⁷⁰ Deininger 1965, 16.

⁷¹ For bibliography, see below, p. 103, and Deininger 1965, 50-51, including notes.

Finally, the theory that the highpriest of the first provincial cult in Pergamum was also the leader of the koinon collapses under the weight of the evidence regarding provincial highpriestesses. The numerous koinon inscriptions name only men, indicating that women did not normally participate in the provincial council.⁷² Yet a significant number of the individuals known to have held provincial highpriesthoods in Asia were women (about 20%), and some of them were highpriestesses of the provincial cults in Pergamum.⁷³ The existence of highpriestesses in this cult means that it was highly unlikely for this highpriesthood to have been the top position in the koinon.

It is to be expected that provincial highpriests also played a significant role in the koinon, but the reason for this was not the highpriesthood itself. The same families whose members could afford to serve in provincial highpriesthoods were also prominent families in the political life of the province.

It is possible that the role of the provincial highpriesthood changed with respect to the koinon, and there are three pieces of evidence that suggest this. First, the highpriest of Rome and Augustus is more prominent in the extant koinon documents dated before the provincial cult was established in Smyrna in 26 CE than in the koinon documents after 26 CE. There is too little evidence from the later period, however, to reach a firm conclusion about this.⁷⁴ Nevertheless, it is certain that after 26 CE there were two annual provincial highpriesthoods and this would have required some definition, if not a reorganization, of the highpriesthood of Rome and Augustus.

The other two pieces of evidence are the developments that occurred during the second half of the first century CE which are outlined above. During this period, the title "highpriest of Asia" appeared and women began to serve in the provincial highpriesthoods. It may be that the initiation of a second provincial cult led

⁷² It would be unconvincing to argue that the existence of provincial highpriestesses proves that women served in the koinon. The many known documents of the koinon do not mention any women participants, and it cannot be assumed that a highpriest or highpriestess was a part of the koinon.

⁷³ E.g., *MAMA* 6.373; *IGR* 4.908.

⁷⁴ A decree of the koinon under Claudius from Hypaipa might include a proposal of a highpriest of Asia but the reference is partially restored (*IvE* 7.2.3801 II). One Hadrianic decree might be restored to record a proposal by the highpriest of Rome and Augustus (*IGR* 4.1410; see Buckler, "Auguste," 181).

to a reorganization within the koinon that allowed women to hold provincial highpriesthoods and that changed the relationship of the provincial highpriesthood to the koinon. While there is not enough evidence to prove that such a reorganization occurred, the convergence of these three developments—multiple provincial cults, provincial highpriestesses, and the new title “highpriest(ess) of Asia”—suggest that significant changes in the definition of Asia’s highpriestly offices took place between 26 and 50 CE.

For the most part, the responsibilities of the highpriesthoods of Asia seem to have been more strictly cultic than governmental. This is born out by a difference between the provincial highpriesthoods and the highpriesthoods associated with other cults. While other cults with highpriesthoods also had priests or priestesses,⁷⁵ there are no known “priests/priestesses of Asia.” Since the highpriests and highpriestesses were the only sacerdotal offices connected with the provincial cult, it is most likely that they personally performed the sacrifices of the cult.

The absence of other priestly offices in the provincial cults also suggests that cultic activity was relatively infrequent in comparison to other cults, for one official could complete the tasks. Wealthy individuals, who sometimes lived elsewhere, fulfilled their responsibilities for a year by paying certain expenses and by performing cultic acts at major festivals, perhaps only once during a term of office.

Asiarchs

According to Liddell and Scott’s *Greek-English Lexicon*, an Asiarch was a “priest of the Imperial cult in the province of Asia.”⁷⁶ Along with several inscriptions, three literary texts are cited—Strabo 14.1.42, Acts 19:31, and *Dig.* 27.1.6.14—that do not suggest any connection between Asiarchs and imperial cult priesthoods. LSJ cannot be faulted for its definition, though; the incorrect identification of Asiarchs with provincial highpriests permeates the secondary literature on the topic.⁷⁷ Nearly every article or book that discusses

⁷⁵ For the Dionysos cult, see *MAMA* 3.454 (Aphrodisias); for Aphrodite, *MAMA* 3.514 (Aphrodisias).

⁷⁶ Henry George Liddell, Robert Scott, *A Greek-English Lexicon* rev. by Henry Stuart Jones (9th ed.; Oxford: Clarendon, 1940) 256. *Dig.* 27.1.6.14 is also cited as an example of the use of ἀσιάρχης. This reference is discussed below, p. 93-97.

⁷⁷ The use of “highpriest” and male language in this section is intentional; no one has suggested that highpriestesses were called Asiarchs. See below, p. 110-11.

Asiarchs mentions the literary sources, so these three texts will provide a starting point for an examination of the nature of the Asiarchate. A review of the archaeological evidence will follow, and then scholarly interpretations of the office will be evaluated.

In his *Geography*,⁷⁸ Strabo wrote that the city of Tralles always had as many wealthy people as any other city in Asia.

Καὶ ἀεὶ τινες ἐξ αὐτῆς εἰσὶν οἱ πρωτεύοντες κατὰ τὴν ἐπαρχίαν, οὓς Ἀσιάρχας καλοῦσιν.

Always certain ones from there [i.e., from Tralles] are leaders in the province, whom they call Asiarchs.

He then went on to name one Asiarch, a certain Pythodoros, who was a prominent supporter of Pompey and whose daughter Pythodoris became the queen of Pontus.

Strabo's portrayal of Asiarchs is brief and does not go into detail. It is clear that those who held the office were wealthy. The description of Pythodoros's political activities suggests a connection with governmental affairs, both regional and international. Strabo did not clarify if the political activities of Pythodoros were directly related to the Asiarchate nor did he connect the office with any sort of priesthood.

Asiarchs are mentioned in Acts 19:31, but once again the text does not clarify the nature of the Asiarchate. The text portrays several Asiarchs in the city of Ephesus at one time who seem to be influential in city affairs, and who are friends of the apostle Paul. Again, there is no implication that Asiarchs were responsible for sacerdotal or imperial cult activities.

The third literary reference to Asiarchs—a third century text incorporated into a sixth century text—has been the most influential factor in the creation of the theory that identifies Asiarchs with provincial highpriests.⁷⁹ In *Dig.* 27.1.6.14, the subject is guardianship of minors and the third century CE author Modestinus was quoted as having said,

⁷⁸ *Geog.* 14.1.42.

⁷⁹ I. Marquardt ("De provinciarum romanarum conciliis et sacerdotibus," *Ephemeris Epigraphica* 1 (1872) 210-11) is just one example. Nearly every writer on the topic deals with this text.

Ἔθνους ἱερωσύνη, οἶον Ἀσιαρχία, Βιθυνιαρχία, Καππαδοκαρχία, παρέχει ἀλειτουργήσιαν ἀπὸ ἐπιτροπῶν, τοῦτ' ἔστιν ἕως ἂν ἄρχῃ.⁸⁰

A priesthood of an ethnic group, such as the Asiarchate, Bithyniar-chate, and the Kappadokiarchate, is free of public responsibilities for guardianships, that is, while serving in office.

Those scholars who have rejected the equation of Asiarchs and provincial highpriests have made various suggestions about the significance of this text. Brandis argued that an inaccurate interpolation into Modestinus's text accounted for this description of Asiarchs as priests, basing his arguments on the supposition that no definition of an Asiarch would have been necessary in the third century, and on the geographically restricted list of examples (Asia, Bithynia, Kappadokia).⁸¹ Magie is one of the few scholars to accept Brandis's interpolation theory,⁸² but Deininger successfully marshalled the counterarguments.⁸³

Kearsley accepted Modestinus's remark as authentic, but concluded that Modestinus was referring to magistracies and not to priesthoods. Her argument can be summarized as follows. First, she observed that the use of οἶον and the naming of three offices from different provinces probably was meant to include a range of officials. After noting that the same wealthy men tended to hold both magistracies and priesthoods, she argued that Modestinus chose the verb ἄρχω because it relates more often to magistrates than to priests, which suggests that Modestinus thought of the Asiarchs as magistrates. He used the term ἱερωσύνη because the same men often held priesthoods as well.⁸⁴

This argument falters on the fact that Modestinus was writing a legal text. It is not convincing to suggest that a legal writer would categorize the Asiarchate as a priesthood, but use the verb ἄρχω because he actually considered Asiarchs to be governmental officials. In such a text, precise usage must be assumed.

⁸⁰ Th. Mommsen, *Digesta Iustiniani Augusti* (Berlin: Weidmann, 1870) 1.783-84, with the widely-accepted reading of ἱερωσύνη for Mommsen's ἱεραρχία. See Deininger 1965, 44 n. 5; Magie 1950, 2:1299 n. 61.

⁸¹ Brandis, "Asiarches," *PW* 2 (1896) 1574-76.

⁸² Magie 1950, 2.1299 n. 61.

⁸³ Deininger 1965, 44-46.

⁸⁴ R. A. Kearsley, "M. Ulpius Appuleius Eurykles of Aezani: Panhellene, Asiarch and Archiereus of Asia," *Antichthon* 21 (1987) 55 n. 40.

Furthermore, Kearsley's distinction between "magisterial power" and "sacred officials" is not a helpful conceptual model for illuminating this text.⁸⁵ Municipal officials normally participated in cultic activities in the course of their "political" responsibilities, and a priesthood could be called an ἀρχή.⁸⁶ The difference between a priest and a magistrate was not that one dealt with sacred activities and the other with political matters. The duties of a priest were defined primarily in terms of sacrificial activities. A magistrate might perform sacrifices but that was not his primary duty.

The specific terminology Modestinus used in 27.1.6.14 demonstrates that the jurist did not equate the Asiarchate with the provincial highpriesthood. Rather than the technical term ἀρχιερεὺς of a province, Modestinus chose the unparalleled ἔθνους ἱερωσύνη, "priesthood of an ethnic group." The absence of the term ἀρχιερωσύνη is deliberate, for Modestinus's subject was not provincial highpriesthoods. The term "province" (ἐπαρχία) was not used by the jurist either.

An examination of the larger context in *Dig.* 27.1.6 helps clarify the reference to priesthoods of ethnic groups and confirms that Modestinus did not consider the Asiarchs to be provincial highpriests of an imperial cult. The following text appears a bit earlier in the *Digest*, in which Modestinus quoted a decree of Commodus that contained material from a letter of Antoninus Pius about exemptions for certain professions.

Φιλοσόφους, ῥήτορας, γραμματικούς, ἰατροὺς ἀτελεῖς εἶναι γυμνασιαρχῶν, ἀγορανομῶν, ἱερωσυνῶν, ἐπισταθμιῶν, σιτωνίας, ἐλαιωνίας, καὶ μήγε κρίνειν μήτε πρεσβεύειν μήτε εἰς στρατεῖαν καταλέγεσθαι ἄκοντας μήτε εἰς ἄλλην αὐτοὺς ὑπηρεσίαν ἐθνικὴν ἢ τινα ἄλλην ἀναγκάζεσθαι. Ἔτι καὶ κεῖνο εἰδέναι χρή, ὅτι ὁ ἐν τῇ ἰδίᾳ πατρίδι διδάσκων ἢ θεραπεύων τὴν ἀλειτουρησίαν ταύτην ἔχει· ἐὰν γὰρ Κομανεὺς ὢν ἐν Νεοκαισαρείᾳ σοφιστεὺς ἢ θεραπεύῃ ἢ διδάσκῃ, παρὰ Κομανεῦσιν ἀλειτουρησίαν οὐκ ἔχει.⁸⁷

Philosophers, rhetors, grammarians, (and) doctors are exempt from gymnasiarchates, offices of agoronomos, priesthoods, billeting, and governmental wheat purchases and oil purchases. (They) do not judge nor serve as presbyters, nor are they enrolled involuntarily in a military campaign nor in any other ethnic service, nor forced to any other

⁸⁵ Kearsley 1987a, 55 n. 40.

⁸⁶ *IGR* 4.456 (Pergamum), 470 (Pergamum), 1523 (Sardis).

⁸⁷ *Dig.* 27.1.6.8-9.

(responsibility). Moreover, it is still necessary to know that anyone teaching or healing in their native city has that *aleitourgesia*; for if someone who is a native of Komana is a sophist, heals or teaches in Neocaesarea, that person does not have *aleitourgesia* from Komana.

The adjective ἔθνικός occurs in this text in the phrase “ethnic service” as a general description of a long list of municipal *leitourgiai*. These were clearly not provincial offices. Thus, the description of the Asiarchate and similarly-titled offices in other provinces as “priesthoods of an ethnic group” in 27.1.6.14 should be understood as a general term for certain municipal offices.

The reference to Asiarchs in 27.1.6.14 came in the context of a discussion of ἀλειτουργησία, or exemption, from guardianships. The next sentence after the Asiarch reference specifies that guardianships were not a governmental matter nor were they administered by the province because citizens were to arrange and fund these guardianships.⁸⁸ The implication is that citizens were granted ἀλειτουργησία from this municipal service if they performed another municipal service like the Asiarchate.

This kind of exemption for other services rendered to a particular city was explicitly described in 27.1.6.9 (quoted above). A sophist, doctor, priest, administrator, or teacher receives *aleitourgesia* only in the city where he or she practices. Thus, *aleitourgesia* was a way of preventing a situation in which one wealthy citizen was forced to take on a number of municipal duties at the same time. In the case of Asiarchs, freedom from a citizen’s duty to undertake guardianships for the good of the city was granted when the duties of the Asiarchate were carried out for the good of that city.

In its context, then, the term “priesthood of an ethnic group” for the Asiarchate, Bithyniarchate, Kappakokiarchate, and others, becomes more understandable. This title covered a range of municipal duties which lasted for a specific period and were defined primarily by the city or region in which they were found. As such, they probably varied quite a bit, not only among the cities but also among the provinces. The common element, according to Modestinus, was the priestly element. There is no suggestion in

⁸⁸ Dig. 27.1.6.15: *Tutela non est rei publicae munus nec quod ad impensam pertinet, sed civile: nec provinciale videtur tutelam administrare.* This is probably from a Latin copy of Modestinus that was incorporated in the Justinianic compilation.

the text of any connection to imperial cults, much less to those of the provinces.⁸⁹

Such is the literary evidence for the Asiarchate. If a more precise understanding of the responsibilities associated with this title is to be found, it will come from the epigraphic and numismatic material.

There are approximately 280 references to Asiarchs in the published coins and inscriptions related to Asia, and this provides quite a bit of information about the office. The first observation to be made is that a great deal of diversity exists in the actual wording of the title "Asiarch." Appendix 1 demonstrates that 253 of the references to this office (about 90%) use the simple title Asiarch without further description. The title appears 19 times as "Asiarch of the temple(s)" or "Asiarch of the temple(s) in . . .",⁹⁰ and two occurrences read "Asiarch of Asia of the temples in Ephesus."⁹¹ Since the phrase "of the temple(s) in . . ." is a technical designation for provincial temples,⁹² at least 21 references overtly connect Asiarchs with the provincial cult of the emperors in Asia. The title "Asiarch of Asia"⁹³ for a member of the Vedian family from Ephesus is perhaps an abbreviation of the "Asiarch of the temples" title, which would yield 22 direct references to provincial cults (between 7 and 8% of the total Asiarch references).

"Asiarch of Asia," however, may constitute a deliberate attempt to distinguish this man's service from that of someone like Aurelius

⁸⁹ A scholion from the corresponding section of the *Basilica* has also been brought into the discussion of the Asiarchate; Brandis, *PW* 2 (1896) 1575. This section asserts that Asiarchs were priests of the province: οἱ ἱερεῖς τῶν ἐπαρχιῶν τοῦτ' ἐστὶν ἀσιάρχαι καὶ οἱ λοιποί. (Note that the technical term ἀρχιερεῖς is not used. The office of a priest of the province is unattested for Asia, except perhaps in Aristides' *Or.* 50.101 where he recorded an offer of ἱερῶσύνῃ κοινῇ τῆς Ἀσίας, "the common priesthood of Asia.") The *Basilica*, however, is a paraphrase of the *Dig.* and is directly dependent on the latter for its information. Furthermore, the *Basilica*, a ninth century production, is much too late to be taken at face value (Wolfgang Waldstein, *Römische Rechtsgeschichte* [7th ed. of the work begun by Gerhard Dulckeit and Fritz Schwarz; Munich: Beck, 1981] 289; Max Kaser, *Römische Rechtsgeschichte* [Göttingen: Vandenhoeck & Ruprecht, 1978] 272). Or shall we also consider the opinion of Constantine VII Porphyrogenitus (*de themat.* 3.2) from the tenth century that Asiarchs were proconsuls?

⁹⁰ It is probably correct to reconstruct the title in *IvE* 3.653 and 687 as well, yielding 23 occurrences.

⁹¹ *IvE* 3.692 (cf. *IvE* 4.1130) and 897.

⁹² See above, p. 77-79.

⁹³ *IvE* 7.2.4110.

Demetrios, who was called “Asiarch of (his) native city” (Ἀσιάρχης τῆς πατρίδος),⁹⁴ or someone like Julius Dionysios who was “Asiarch of the Pergamenes.”⁹⁵ Two other titles—“Asiarch of the prytanis”⁹⁶ and “Asiarch of the secretariate”⁹⁷—appear to refer to specific responsibilities that were not necessarily a part of every Asiarch’s duty. Thus, it seems that the title Asiarch could encompass various sorts of functions in several different institutions.

Another activity in which Asiarchs were prominent was the staging of public spectacles. One Asiarch is known to have sponsored animal fights,⁹⁸ but they are more often linked directly to gladiatorial contests.⁹⁹ The inscriptions set up by “families” of gladiators in honor of Asiarchs may have been occasioned by support for games, or they may indicate that these Asiarchs financed such groups.¹⁰⁰ Since these inscriptions do not refer to other offices, but only to the Asiarchate of the individual, it is likely that in such instances their support for the gladiators was a part of their Asiarchate.

The many references to Asiarchs on municipal coins suggest that Asiarchs sometimes supplied funding for cities to mint coins,¹⁰¹ for eighty-four of the Asiarch attestations (about 30% of all references) are on municipal coins.¹⁰² The known coins are no earlier than the reign of Antoninus Pius (138-161 CE) and include no references to Asiarchs of temples. The only deviation in the numismatic evidence from the simple title “Asiarch” is the reference to Aur. Demetrios as the “Asiarch of (his) native city,” and the occasional attribution of multiple terms of service to one man.¹⁰³ Since about 8% of the total Asiarch references mention provincial temples, one would expect 6 or 7 references to provincial temples on the known coins if

⁹⁴ *CollWadd* 6505.

⁹⁸ Philippos of Tralles, *Mart. Poly.* 12:2.

⁹⁹ Menekles Diophantes sponsored gladiator games, *IvSm* 2,1.637.

¹⁰⁰ Tatianus (*IvE* 4.1182; 5.1620); Timon (*IGR* 4.1454 [Smyrna]); Pankratides (*IvE* 7,2.4346); Reginus (*IvE* 5.1621). Both the Asiarch and his wife are honored in *IGR* 4.156 (Kyzikos) and *IGR* 4.1075 (Kos).

¹⁰¹ *Magie* 1950, 1.450.

¹⁰² There is also one koinon coin as well as four from the Ionian League of 13 Cities that mention Asiarchs.

¹⁰³ *CollWadd* 6505. Three coins name men who were twice Asiarch, and one coin mentions a man who was three-times Asiarch.

the distribution were the same. The differential between the inscriptional and numismatic references probably reflects different responsibilities for the Asiarchs attested epigraphically and those attested on coins.

The Modestinus text in *Dig.* 27.1.6.14 stated that the Asiarchate entailed responsibilities for a fixed amount of time. This is confirmed by the archaeological evidence, for some inscriptions and coins use the office as a way to record the date of the respective object,¹⁰⁴ and many individuals are known to have been Asiarchs more than one time. The length of the term is not known, though. In view of the wide range of functions an Asiarch might play, it is probably best to assume that there was no single, fixed amount of time that applied to all terms of office. Thus, a coin dated by the office of an Asiarch may indicate a longer term of service, while an inscription like *IvSm* 2,1.638 implies that Julius Menokles Diophantes was an Asiarch for five days while he sponsored gladiatorial battles.¹⁰⁵

Nearly all recent scholarly discussions of the office of Asiarch have agreed with the conclusion that "Asiarch" was simply a different title for the office of the provincial highpriest.¹⁰⁶ The following review of their arguments demonstrates that the identification of the two titles is an incorrect scholarly tradition that pays too little heed to the extant data, and minimizes the distinctions between the provinces of the empire.¹⁰⁷

¹⁰⁴ This is clearly indicated in some inscriptions. For example, *IvE* 4.1130 1.7 dates the inscription to the time when M. Fl. Rufus was serving as Asiarch (ἐπὶ Μ. Φλ. 'Ρούφ[ου] ἀσιάρχου).

¹⁰⁵ *IvE* 7,1.3070 is a similar inscription in which an Asiarch is honored for staging thirteen days of fights with "Libyan animals." It is not certain whether these spectacles were staged as the responsibility of the Asiarchate, or whether the man who held the games happened to have been an Asiarch at some time.

¹⁰⁶ One of the most important early works to identify the two offices was I. Marquardt, "De provinciarum romanarum conciliis et sacerdotibus," *Ephemeris Epigraphica* 1 (1872) 208-14. Ramsay agreed ("The Province of Asia," *CIRev* 3 [1889] 175), as did Beurlier (*Essai sur le culte rend aux empereurs romains* [Paris: Ernest Thorin, 1890] 131-34), Mommsen (*ÖJh* 3 [1900] 8), Deininger, (1965, 41-50), Bowersock (*Augustus and the Greek World* [Oxford: Clarendon, 1965] 117), Rossner ("Asiarchen," 102-7), Millar (*The Emperor and the Roman World* [Ithaca, N. Y.: Cornell University Press, 1977]), and R. Merkelbach ("Der Rangstreit der Städte Asiens und die Rede des Aelius Aristides über die Eintracht," *ZPE* 32 [1978] 287-96).

¹⁰⁷ See J. A. O. Larsen, *Representative Government in Greek and Roman History* (Berkeley and Los Angeles: University of California Press, 1955) 118-19, for an

The arguments of the scholars who identify the Asiarchs and the provincial highpriests can be summarized under six headings. The first argument is that several men are known to have held both titles, Asiarch and provincial highpriest. The actual number of men in this category is approximately 15, but the fact that they held both titles indicates only that they were from the small wealthy sector of society in Asia that could afford such offices.¹⁰⁸

Of the men who held both titles, there are only three individuals whose titles have had a significant effect on the argument. In particular, the discussion has focused on Tiberius Julius Reginus¹⁰⁹ because he was called both ἀρχιερέυς β ναῶν τῶν ἐν Ἐφέσῳ¹¹⁰ and ἀσιάρχης β ναῶν τῶν ἐν Ἐφέσῳ¹¹¹ in the last half of the second century CE. This example was crucial evidence for Taylor and Deininger, for it seemed impossible to them that one man would happen to hold both offices with such similar titles twice.¹¹² Such reasoning is hardly convincing, though. There are other examples in the archaeological record of individuals holding different offices the same number of times.¹¹³

The comments of Taylor and Deininger exemplify the sort of superficial observation which has hampered the debate for so long.

example of these tendencies. There is less evidence for these types of offices in other provinces than in Asia, and so they are not of much help in understanding the nature of the Asiarchate. Furthermore, the extant evidence suggests that each area with such an office defined it in its own way. Even Deininger (1965, 69-73) recognized that the Lycian koinon had its own historical development that resulted in particular organizational structures and offices, and warns against facile comparisons with other areas. Another indication of province-specific peculiarities is the fact that Asia had a male dominated Asiarchate, while both Macedonia and Lycia had special terms for the Μακεδονιάρχισσα and the Λυκιάρχισσα (Deininger 1965, 76).

¹⁰⁸ Magie (1950, 2:1300-1301 n. 61) pointed out that the small number of men known by both titles can be used as an argument against the identification of the two offices. If the titles had been interchangeable, one would expect a larger number of men known to have held both titles.

¹⁰⁹ E.g., Beurlier 1890, 131.

¹¹⁰ "Twice highpriest of the temples in Ephesus;" *IvE* 5.1605; 1611.

¹¹¹ "Twice Asiarch of the temples in Ephesus," *IvE* 4.1130. See also *IvE* 4.1105a (β αἰαάρχου ναῶν τῶν ἐν Ἐφέσῳ); and *IvE* 3.692 (δὶς ἀσιάρχην τῆς Ἀσίας ναῶν τῶν ἐν Ἐφέσῳ).

¹¹² Lily Ross Taylor, "The Asiarchs," in F. J. Foakes Jackson and Kirsopp Lake, eds., *The Beginnings of Christianity*, part 1: *The Acts of the Apostles* (London: Macmillan, 1933) 258; Deininger 1965, 44.

¹¹³ In *IGR* 4.907 (text below in n. 177, p. 112), Tiberius Claudius Hiero is shown to have served twice as Asiarch and twice as a municipal highpriest.

If a title is viewed as part of a text, rather than detached from its context, a different picture emerges. One of the inscriptions that calls Reginus "twice Asiarch" makes a clear distinction between the two offices, for Reginus is listed as δις ἀσιάρχην in l. 10 while his father, Tiberius Claudius Melito, is called ἀρχιερέως τῆς Ἀσίας in line 9.¹¹⁴ If the two titles referred to the same office, there would be no reason to use different appellations for a son and his father in successive lines of the same honorary inscription. The example of Reginus supports a distinction between the two offices.

The second alleged example in the identification argument is Gaius Julius Philippos.¹¹⁵ He is known as a provincial highpriest¹¹⁶ and Asiarch¹¹⁷ from inscriptions, and is perhaps to be identified with the Philip of Tralles who is called an Asiarch in the *Martyrdom of Polycarp* 12 and a highpriest (not necessarily provincial) in chapter 21.¹¹⁸ If these all refer to the same person, they still do not indicate an identity of office. In fact, at least one of the inscriptions again makes a distinction by naming him as an Asiarch but mentioning his father as a highpriest of Asia.¹¹⁹ The literary references to Philip further distinguish the offices. In the *Mart. Poly.* 12:2, Philip the Asiarch is mentioned because, as Asiarch, he was responsible for games involving animal fights. In chap. 21, a highpriesthood is mentioned because an eponymous official was needed for dating the martyrdom. The functions are quite different and there is no reason to equate them. Furthermore, chap. 21 cannot be assumed to contain reliable historical information about the second century CE because it is a later, hagiographical interpolation into the text of *Mart. Poly.*, introduced into the text in order to date the martyrdom for the church calendar.¹²⁰

¹¹⁴ *IoE* 3.692. *IGR* 4.12, (Thyatira) provides a similar example. In this inscription, the local breadbakers honored the Asiarch and local highpriest Gaius Julius Julianos Tatianos (l. 2-6) and mentioned that his mother and father had served in highpriesthoods of Asia. (l. 12-14).

¹¹⁸ Note, however, Louis Robert's opposition to the identification in "Étude d'épigraphie grecque," *RevPhil* 56 (1930) 34 n. 4.

¹¹⁹ Sterrett 1883-84, 325 #375.

¹²⁰ Hans Frhr. von Campenhausen, "Bearbeitungen und Interpolationen des Polykarmartyriums," *Sitzungsberichte der Heidelberger Akademie der Wissenschaften. Philosophisch-Historische Klasse* 1957, no. 3:31.

Quass, among others, cited a third individual, Tiberius Claudius Aristio of Ephesus, as another example of a man whose "similarity of titles" suggests that "provincial highpriest" and "Asiarch" designated the same office.¹²¹ At least three inscriptions indicate that Aristio was an Asiarch three times,¹²² but the references to three provincial highpriesthoods comes from the restoration of a very fragmentary inscription.¹²³ The restoration may be correct, but it is meager support for a theory identifying Asiarchs and provincial highpriests. None of the 19 Ephesian inscriptions that mention Aristio call him twice highpriest of Asia, and both references to a third highpriesthood are in restored lacunae.¹²⁴ All we know for certain about Aristio is that he served three times as an Asiarch and at least one term as a provincial highpriest.¹²⁵

A second kind of argument used to identify "Asiarch" with "highpriest of Asia" is related to the first. Rossner¹²⁶ and others claimed that since both Asiarchs and provincial highpriests sometimes have the phrase τῆς Ἀσίας ("of Asia") and/or ναῶν τῶν ἐν κτλ. ("of the temples in . . ."), they most likely refer to the same

¹²⁴ Rosalinde Kearsley ("14. Some asiarchs from Ephesos," in G. H. R. Horsley [ed.], *New Documents Illustrating Early Christianity* [Macquarie University: Ancient History Documentary Research Centre, 1987] 53-54) argued that the traditional conclusion (Asiarch = provincial highpriest) is contradicted by the example of Aristio. For if the two titles had referred to the same kind of office, the extant inscriptions would record four terms of office (two dated Asiarch references and two separate highpriesthoods) by the time of Trajanic inscriptions calling Aristio "three-times Asiarch." Therefore, she concluded that the two titles must refer to two kinds of service. This would be a convincing argument, except that Kearsley counted one highpriesthood twice. The two references (*IvE* 2.234 and 235) name two different proconsuls and so Kearsley separated them as two highpriesthoods. However, the two references come from Aristio's one datable highpriesthood that overlapped the tenure of two proconsuls (see above, p. 44; and the chart on p. 46-47). Thus, the Asiarch and highpriesthood references in her hypothetical scenario could total three in Trajan's reign.

¹²⁵ *IvE* 2.234, 235, 239.

¹²⁶ Rossner 1974, 102-3.

office. Such reasoning, however, is without foundation unless one assumes beforehand that the offices are identical. There are other offices in the province of Asia with these phrases in them, such as γραμματεὺς τῆς Ἀσίας ναῶν τῶν ἐν Ἐφέσῳ ("secretary of Asia of the temples in Ephesus"),¹²⁷ ἀργυροταμίας τῆς Ἀσίας ("treasurer of Asia"),¹²⁸ or οἰκονόμος Ἀσίας ("financial administrator of Asia").¹²⁹ No one has ever argued that these offices are identical with the highpriesthood of Asia because the meanings of the terms γραμματεὺς, ἀργυροταμίας, and οἰκονόμος are better understood than that of ἀσιάρχης. These examples show, however, that the designations "of Asia" or "of the temples in . . ." were present in several titles and cannot be used to establish equivalence of separate titles.¹³⁰

Rossner employed a third line of argument used to identify the two titles when she maintained that the functions associated with the two titles are too similar to designate different offices.¹³¹ Specifically, the association of these titles with animal fights and gladiator contests was cited. The actual evidence, however, reveals little similarity of function. Robert has documented the important role that Asiarchs, priests and highpriests played in the staging of such contests, but his view that Asiarchs were provincial highpriests prevented him from examining the differences.¹³² One highpriest of Asia is mentioned as having sponsored animal fights¹³³ and only two more are recorded as the benefactors of gladiatorial spectacles.¹³⁴ It was observed above, however, that Asiarchs are much more often associated with gladiators;¹³⁵ in this they are distinguishable from provincial highpriests.

¹²⁷ *IvE* 7,1.3080. 7,1.3040 mentions a secretary of Asia without reference to temples, and *IGR* 4.821 and 822 (Hierapolis) refer to a secretary of the temples in Asia.

¹²⁸ *CIG* 2782.

¹²⁹ *IGR* 4.1474 (Smyrna).

¹³⁰ Brandis (1896b, 1577-78) was correct in so far as he distinguished Asiarchs of the temples and highpriests of the temples, but his view that Asiarchs were representatives to the koinon detracted from this argument.

¹³¹ E.g., Rossner 1974, 103-5.

¹³² Louis Robert, *Les gladiateurs dans l'Orient grec* (Paris: Edouard Champion, 1940) 270-75.

¹³⁴ Tiberius Flavius Montanus: *IvE* 6.2061 (II); and, Marcus Aurelius Diadochos: *IGR* 4.1230 (if Robert's interpretation of τοῖς δεξιῶν in l. 10-11 is correct [1940, 219 and n. 1]).

¹³⁵ See above, p. 98.

Deininger gathered evidence for another similarity of function between Asiarchs and provincial highpriests. He argued that both had a sacerdotal function (i.e., in the imperial cult).¹³⁶ While this was clearly the case for highpriests of Asia, there is little evidence beyond Modestinus's general label that Asiarchs exercised any priestly function. Deininger's main argument that Asiarchs could have officiated in sacrificial rituals is the title "Asiarch of the temple" and its variants.¹³⁷ We have seen above, however, that the inclusion of a temple in a title does not necessarily indicate a sacerdotal office.¹³⁸

In his attempt to show that Asiarchs were priestly officials, Deininger cited the "fact" that the wives of Asiarchs were sometimes called highpriestesses to prove that their Asiarch husbands were highpriests.¹³⁹ This takes us to the fourth kind of argument used to prove that Asiarchs were provincial highpriests. The reasoning is as follows. Since provincial highpriestesses were honorary officials married to highpriests, and since highpriestesses were in some cases named as wives of Asiarchs and in other cases as wives of highpriests, "Asiarch" and "provincial highpriest" must be different titles for the same office.

It was already observed above that there is no ancient evidence to suggest that provincial highpriestesses were anything but functioning officials. Another problem with this argument, as Kearsley has noted,¹⁴⁰ is that it is circular. One of the main rationales for the honorary highpriestess interpretation is that various highpriestesses were married to functionally equivalent officials: Asiarchs and highpriests.¹⁴¹ But the honorary highpriestess interpretation is also taken as proof that Asiarchs and provincial highpriests were functionally equivalent.¹⁴²

Rossner used a fifth kind of argument to show that Asiarch must have been another title for provincial highpriests. She pointed to the absence of any single piece of evidence in which someone is called both Asiarch and provincial highpriest as proof that the terms were

¹³⁶ Deininger 1965, 47.

¹³⁷ The other piece of evidence is *Dig.* 27.1.6.14, which is discussed above, p. 93-97.

¹³⁸ See p. 103.

¹⁴¹ E.g., Rossner 1974, 102.

¹⁴² Taylor 1933, 259; Deininger 1965, 47.

redundant. There are about 15 men to whom both titles are attributed, but the two titles never appear in the same coin or inscription. If the titles indicated distinct offices, according to this interpretation, surely some inscription or coin would have recorded someone as holding both offices.¹⁴³

This fifth argument does not correctly understand the nature of Greek honorific inscriptions. Rossner refers to them as "inscriptions with an enumeration of all offices similar to a *cursus honorum*."¹⁴⁴ The structured nature of Roman equestrian and senatorial careers led to the kind of Latin inscription that listed an ascending series of offices known as a *cursus honorum*. The careers of the Greek provincial elite did not follow such a pattern. Rather, members of the provincial elite served a variety of offices that appear in different combinations in Greek honorific inscriptions.¹⁴⁵ The absence of a single inscription or coin that calls someone Asiarch and highpriest of Asia is simply a gap that is consistent with Greek municipal and provincial service in the Roman imperial provinces, and in accord with common practice in Greek inscriptions. It does not prove that the unrecorded titles are equivalent to those recorded.¹⁴⁶

The final argument used to identify Asiarchs with provincial highpriests is a fourth century CE inscription (372-78 CE). This imperial rescript to the proconsul Festus that mentions Asiarchs was found in Latin and Greek copies in Ephesus.¹⁴⁷ The rescript pro-

¹⁴³ Rossner 1974, 104.

¹⁴⁴ "...Inschriften mit cursus-honorum-ähnlicher Aufzählung aller Ämter ..." Rossner 1974, 104.

¹⁴⁵ The difference between Greek provincial and imperial careers can be observed in a Greek "*cursus honorum*" like *IGR* 4.1213 (Thyatira; early third century CE). After an enumeration of his many positions in the imperial service, T. Ant. Cl. Alfenus Arignotus was listed as the son and descendant of highpriests of Asia, a provincial office. He held one municipal office in Kyzikos, but his own accomplishments do not include the provincial highpriesthood because he had moved beyond the provincial sphere of activity to a career in the service of the empire.

¹⁴⁶ The Library of Celsus in Ephesus provides a rare example of a *cursus honorum* in Asia in two copies, Latin and Greek; *IvE* 7,2.5102-03. The Asian mason was unfamiliar with the standard Latin pattern and used the accusative case (the Greek pattern) rather than the dative for the offices listed in Latin. The fact that the Greek translation is not slavish also contradicts Rossner's view of Greek honorific practice. Allusions to service during Domitian's reign are somewhat more elaborated, and one office in the Latin *cursus*—*XV viro s(acris) f(aciundis)*—is omitted in Greek. See Steven Friesen, "Ephesus A," *ARNTS* 2 (Philadelphia: Trinity, forthcoming).

¹⁴⁷ *IvE* 1a.43.

vides the imperial response to several proposals for revivifying the province's festivals. The main concern of the rescript is that the four large cities of fourth century Asia be able to sponsor provincial festivals. To this end, they are permitted to recruit from other cities Asiarchs or alytarchs, who are referred to earlier in the inscription as those wearing the crown of Asia.¹⁴⁸ Special mention is made in the inscription that such officials should not be allowed to abandon their responsibilities to their cities of origin if they gain renown in the *metropoleis*.

Rossner and the translator of the inscription for *IvE* interpret the "crown of Asia" reference to mean provincial highpriests.¹⁴⁹ This is not the conclusion to which this inscription leads, though. Crowns were not only a sacerdotal symbol. They were also votive offerings to deities, prizes for competitions, or honors for benefactors.¹⁵⁰ Moreover, no one who equates Asiarchs with imperial priests has addressed the question of the status of cults of the emperors in the last half of the fourth century CE. There is nothing about this text that would suggest a sacerdotal function for Asiarchs. Rather, the text indicates that Asiarchs sponsored festivals, and that cities were dependent on their gifts and services.

The attempt to equate Asiarchs and provincial highpriests creates a scenario otherwise unknown in the Graeco-Roman world: two distinct and unrelated titles for the same prominent, provincial office. In order to explain this anomaly, scholars like Deininger have resorted to a historical reconstruction that is both implausible and inaccurate.¹⁵¹ His explanation for the existence of the two titles is that the koinon of Asia was led by an Asiarch in the Republican period, even though this assumption is not supported by any evidence from antiquity. It is then supposed that when the province of Asia established its first provincial cult in 29 BCE, the Asiarch who led the koinon became the provincial highpriest¹⁵² and was given this title as well as that of Asiarch. Both titles remained in use but, for some unknown reason, the title Asiarch disappeared from public documents in the early principate only to come back into vogue in

¹⁴⁸ *IvE* 1a.43 l. 7, 22 (titles); l. 5, 18-19 (crowns).

¹⁵¹ Deininger 1965, 50. Millar (1977, 387) accepts Deininger's reconstruction.

¹⁵² Arguments against this definition of the highpriesthood are given above, p. 89-91.

the second and third centuries CE, at which time Asiarch almost completely replaced the title highpriest of Asia.¹⁵³

The “almost exclusive” (*fast ausschliesslich*) use of the title Asiarch in the inscriptions and coins of the second and third centuries that is asserted by Deininger is not correct. There are about 40 known references to provincial highpriests of Asia that can be securely dated to the period 27 BCE–100 CE (127 yrs.). The number of known references between 100–268 CE (168 yrs.) approximately doubles to about 85. Since the number of cities with provincial cults in Asia increased after the first century CE, and since the total number of available inscriptions and coins from the later period is greater, it appears that the usage of the highpriest title remained relatively stable throughout both periods. The title highpriest of Asia did not fall into disuse after the first century CE, as Deininger would have us believe.

The question of the temporal distribution of references to Asiarchs, however, requires closer scrutiny. It has often been noted that Strabo, a literary source from the early principate, provides the earliest preserved occurrence of the word Asiarch and that we hear nothing of the office for most of the first century CE. After this lone literary source from the Augustan period, a surprising pattern emerges in the references to Asiarchs. Once the attestations are ordered chronologically, it becomes clear that there are no known references to Asiarchs in coins or inscriptions before the late first century CE.¹⁵⁴ The first reference appears in the year 89/90 under the proconsul M. Fulvius Gillo, after which Asiarchs proliferate rapidly in the public record. At least 16 references to Asiarchs are attested from the years 90 to 120 CE. By the year 300 CE (210 years after Gillo’s proconsulship), there are a total of about 280 references to Asiarchs.

The large number of total attestations involved and the sudden emergence of the title in the archaeological record make it impossible to conclude that the absence of Asiarchs from inscriptions and coins before 89 CE is an accident of preservation or discovery. The

¹⁵³ Deininger 1965, 48.

¹⁵⁴ Kearsley argued (“A Leading Family of Cibyra and some Asiarchs of the First Century,” *AnSt* 38 [1988] 43-51) that the lineage of one family with several Asiarchs in it could be traced back so that at least one Asiarch could be dated to the late first century BCE. The problems with her reconstruction are discussed in Appendix 2.

contrast with the attestations of provincial highpriests and highpriestesses is instructive, for at least 24 out of about 185 references to the highpriesthood are known from coins or inscriptions that can be dated with certainty before the year 89 CE. These data lead to the conclusion that the institution of the Asiarchate, an inheritance from the Republican era in Asia, was either redefined or reinvigorated in the eighties of the first century CE. The exact nature of this change is not clear from the sources, but something happened in that decade which caused the Asiarchate to begin to enter the archaeological record. The significance of this shift will be addressed in chapter six, after an examination of the games associated with the Cult of the Sebastoi in Ephesus.

A few interpreters have rejected the identification of the Asiarchate with the provincial highpriesthood of Asia. Writing in the third quarter of the nineteenth century, Waddington argued that Asiarchs were distinct from provincial highpriests. The highpriests were responsible for provincial imperial cult, he maintained, while the Asiarchs were in charge of the provincial festivals.¹⁵⁵ His view has attracted some adherents; however, he was working with much less data than was available later on, and could do little more than suggest his conclusion.

The connection of Asiarchs with gladiators and games, discussed above (p. 98, 103), is evident, and so a variant of Waddington's theory was developed. After examining the evidence, Monceaux concluded that the provincial festivals were pentaeteric and that the Asiarchs were provincial highpriests who served in the year when a provincial festival was held.¹⁵⁶ It later became clear that provincial festivals occurred more often than every four years in Asia, but the argument for Asiarchs as provincial highpriests who also served as the agonothete of a provincial festival has survived *mutatis mutandis*.¹⁵⁷

Brandis reached a different conclusion in his interpretation of the Asiarchate. After attempting to disprove the arguments for an iden-

¹⁵⁵ Philippe Le Bas, and William H. Waddington, *Voyage Archéologique en Grece et en Asie Mineure* (Paris: Firmin Didot, 1870) 3.245-46.

¹⁵⁶ Paulus Monceaux, *De communi Asiae provinciae (KOINON ΑΣΙΑΣ)* (Paris: Ernestum Thorin, 1885) 55-67. Monceaux was not the first to associate Asiarchs with the provincial games; he is credited with developing this particular refinement of the general position.

¹⁵⁷ Dieter Knibbe, "Ephesos vom Beginn der römischen Herrschaft in Kleinasien bis zum Ende der Principatszeit (Historischer Teil)", *ANRW* 2.7.2 (1980) 773.

tification of Asiarchs with provincial highpriests, he went on to assert his confidence that Asiarch was the title of the men who represented the cities of Asia in the koinon.¹⁵⁸ His position, though, was hampered by a complete lack of evidence. As proof for his conclusion, he compared the fact that there were several Asiarchs in a large city with Aristides' indication that there were several koinon representatives in a large city.¹⁵⁹ Aristides' use of the term σύνεδροι for the koinon representatives perplexed Brandis, though.

The interpretation that is most congruent with the extant evidence regarding the Asiarchate is Magie's conclusion that the title of Asiarch was used for a special category of *leitourgia* in Asia that could encompass a variety of responsibilities. It is not known how the title was accorded, but it clearly corresponded to municipal and not provincial duties.¹⁶⁰

Magie's conclusion can be strengthened by another line of argument. There is a dramatic difference in the number of numismatic attestations for the offices discussed in this chapter.¹⁶¹ While eighty-nine of the references to Asiarchs (about 32% of the total) are found on coins, only ten out of over 140 references to provincial highpriests, and no references to provincial highpriestesses, come from coins. Two of the ten numismatic attestations of highpriests are on coins of the koinon minted in Ephesus during the Augustan period that name the highpriest Alexander, son of Kleon.¹⁶² The other eight attestations are from Eumeneia and name either Julius Kleon¹⁶³ or M. Cl. Valerianus.¹⁶⁴

This numismatic evidence provides strong support for a distinction between the Asiarchate and the provincial highpriesthood, for the differences in the media of the attestations are expressions of the fact that the two offices had distinct responsibilities. The relative

¹⁵⁹ Aristides *Or.* 50.103.

¹⁶⁰ Magie 1950, 1.449-50; 2.1298-1301.

¹⁶¹ There is a peculiarity about Ephesian attestations of Asiarchs that should not be forgotten in evaluating the data. Ephesus is the largest source of references to Asiarchs, but all 107 of these are in inscriptions and none on coins. The reason for this is unclear, for other large cities like Pergamum, Smyrna, Sardis, and Kyzikos all have epigraphic and numismatic attestations of Asiarchs. Apart from Ephesus, then, there are still 153 references to Asiarchs, of which 76 (nearly 50%) are known from coins.

¹⁶² *BM Lydia* 251 #104-5.

paucity of references to provincial highpriests on the coins confirms the conclusion that the province's highpriesthoods were distinct from the Asiarchate, and that they were focused less on the cities than on the region and its festivities.

Kearsley accepted Magie's conclusion that the Asiarchate was related primarily to the cities of Asia, but she disagreed with the characterization of Asiarchs as benefactors. Kearsley pointed out the frequency with which the title Asiarch occurs with other titles of high civic offices. Her conclusion was that the Asiarchate was a municipal magistracy in which men served for a fixed period of time.¹⁶⁵

There are other signs of the involvement of Asiarchs in the administration of city life in Asia as well. Kearsley's interpretation of various inscriptions, and especially of two proconsular letters, one from Ephesus and one from Sardis, led to the conclusion that "[t]he most likely interpretation of the asiarch's role in these two letters is that he was the foremost member of the cities' boards of magistrates."¹⁶⁶

Kearsley noted the gender differential in attested Asiarchates as support for her interpretation that the office was magisterial.¹⁶⁷ In the approximately 280 known references to Asiarchs, only one woman has entered the historical record, and in this case only in conjunction with a man, who was probably her husband.¹⁶⁸ This virtual absence of female Asiarchs has been observed by others,¹⁶⁹ but Kearsley is the only scholar to use this as a clue to the nature of the office. She cited Van Bremen's observation that while women often held priesthoods or acted as benefactors in the Imperial period, they tended to be excluded from activities which included travel,

¹⁶⁵ Kearsley has written on several aspects of this issue in various articles. A succinct summary of her interpretation of the responsibilities of Asiarchs is found in 1987a, 49-56, a copy of which she was kind enough to send to me. On the length of office, see esp. 52-56.

¹⁶⁶ Kearsley 1987a, 55; see also 54-56.

¹⁶⁷ Kearsley 1987a, 54, and n. 35.

¹⁶⁸ M. Cl. Juliana and M. Aur. Zeno are called Ἀσιάρχαι τὸ δεύτερον in an inscription from Bournabat; *IGR* 4.1481. Kearsley says the two may or may not have been married (1987a, 54 n. 34), but the fact that the inscription is a gravestone for the two suggests that they were man and wife.

¹⁶⁹ Brandis used this as an argument for distinguishing between the Asiarchate and the provincial highpriesthood; 1896b, 1566-67. Magie 1950, 2.1299-1300 n. 61.

deliberation, or voting.¹⁷⁰ While I agree with Kearsley that the overwhelming number of male Asiarchs is significant, the extant evidence regarding the nature of the Asiarchate is not specific enough to allow us to conclude exactly why it is significant. In the case of an office with high status such as the Asiarchate, women might have been excluded for ideological reasons that were not related to governance of the cities.

The crux of Kearsley's argument that Asiarchs were officials in municipal governments, however, is in the "inscriptions which show asiarchs in action."¹⁷¹ Such inscriptions often name the Asiarch as a *grammateus* or as holding some other high office.

This connection is so consistent that it suggests the asiarchy involved some executive power in the city allied to that of the *grammateus*.¹⁷²

The problem with this argument is in the criteria by which certain inscriptions are deemed to show Asiarchs in action. Kearsley cited several factors such as overt reference, participial constructions, or "the application of two titles to the same person" in which case "it is the context which determines the interpretation."¹⁷³ The bulk of her supporting data, however, consists of those inscriptions in which the title Asiarch is one of two or more that are attributed to an individual, and this criterion is not a reliable one for showing Asiarchs in action.

As mentioned above, Asiarch was clearly the title of an office with a fixed term. It was also a title that could be mentioned later in honoring that same person. For example, Ti. Cl. Aristio was called "three-times Asiarch" in an architrave inscription from the Trajan fountain in Ephesus that can be dated to 102-114 CE by the imperial nomenclature.¹⁷⁴ He was later called "three-times Asiarch" on the endowment inscription from the Celsus library that is dated sometime later than 114.¹⁷⁵ Kearsley's criteria do not help us distinguish

¹⁷⁰ Kearsley 1987a, 54 n. 35. Riet Van Bremen, "Women and Wealth," in Averil Cameron and Amelie Kuhrt (eds.), *Images of Women in Antiquity* (Detroit: Wayne State University Press, 1983) 223-42, esp. 235-37.

¹⁷¹ Kearsley 1987a, 54.

¹⁷² Kearsley 1987b, 53.

¹⁷³ Kearsley 1987b, 53 n. 32.

¹⁷⁴ *IoE* 2.424. See Kearsley 1987a, 54.

¹⁷⁵ The endowment inscription (*IoE* 7.2.5153) names Aristio along with the heirs of Aquila, a man who was still alive when mentioned in an inscription from the years 114-117 (*IGR* 3.173; Ankara).

whether both of these references or only the second came after Aristio's third Asiarchate.

Another example of an Asiarch in action cited by Kearsley demonstrates the uncertainty introduced into the discussion by concluding that most multiple titles indicate offices held at the same time.¹⁷⁶ In *IGR* 4.907, Tiberius Claudius Polemo is named as an Asiarch.¹⁷⁷ Kearsley's criteria, however, would require us to suppose that many of the relatives named in the same inscription also held their offices at that same time for there is no grammatical distinction between Polemo's title of Asiarch, his father Tiberius Claudius Hiero's titles of Asiarch for the second time and municipal highpriest for the second time, and the Asiarch title of his brother Tiberius Claudius Deioterianus. It is conceivable that they all held these positions at the same time, but the further references to his forefather Marcius Deioterianus as Lyciarch and his forefather Flavius Krateros as Asiarch for the second time as well as municipal highpriest indicate that the title Asiarch may occur long after a person's Asiarchate.

In fact, many (and perhaps most) of our references to Asiarchs come after the term of service. It cannot be assumed that a particular inscription or coin comes from that man's term of office unless there is a clear reference to this fact from the use of the preposition ἐπί, the appearance of a present participle of the verb ἄσιαρχέω, some other overt contextual indication, or knowledge from external evidence. For this reason, many crucial pieces of evidence from Kearsley's argument for Asiarchs as foremost municipal magistrates must be disallowed.¹⁷⁸

Summary

This analysis of the ancient and more recent sources related to the provincial highpriesthoods and the Asiarchate has produced the following reconstruction. During the period when Asia had only one

¹⁷⁶ Kearsley 1987a, 54, and n. 38.

¹⁷⁷ In this inscription from Cibyra, a guild of leatherworkers honored Τιβέριον Κλαύδιον Πολέμωνα, Ἀσιάρχην, ἱππικόν, Τιβερίου Κλαυδίου Ἰέρωνος, Ἀσιάρχου δις καὶ ἀρχιερέως δις ὕδν, Τιβερίου Κλαυδίου Δημοτηριανοῦ Ἀσιάρχου ἀδελφόν, Μαρκίου Δημοτηριανοῦ Λυκιάρχου καὶ Φλαβίου κρατεροῦ Ἀσιάρχου δις καὶ ἀρχιερέως ἔκγονον.

¹⁷⁸ This involves especially the inscriptions cited in her footnotes 31-32, 36-38, and 41 in 1987a, 53-55.

provincial cult (29 BCE–26 CE), the highpriest of that cult was known as the highpriest of Rome and Augustus but never as the highpriest of Asia. He was often active in the provincial koinon but there is no reason to suppose that he was the chairman of that council.

The establishment of a second provincial cult in Smyrna in 26 CE created a new situation: there were now two provincial highpriesthoods in a given year. Not long after this, two significant developments are attested. By 40 CE, the title “highpriest of Asia” was in use in the province; by the end of the first century CE it had become the title for the highpriestly official in the cult of Rome and Augustus in Pergamum as well. The second development was that women were admitted to the provincial highpriesthood beginning in the forties or fifties of the first century CE. These were not simply honorary officials but rather women involved in sacrificial activities. The coincidence of these two developments in the second quarter of the first century CE might indicate that the role of the provincial highpriesthood underwent revision because of the initiation of a second provincial cult, but the evidence only allows us to suggest this in a tentative fashion.

Finally, Asiarch was not another name for a provincial highpriest, nor was the Asiarchate directly related to the provincial cults of the emperors. Certain prominent men were called Asiarchs already in the late Republican period but the exact nature of their service is unclear. In the eighties of the first century CE, the Asiarchate underwent revision and quickly became a vital part of public life in Asia. In the second and third centuries CE, Asiarchs performed a variety of public services that were especially related to municipal life in Asia. Their duties were sometimes priestly and sometimes involved provincial temples, but imperial cults were not a necessary component of the Asiarchate.

CHAPTER FIVE

GAMES AND FESTIVALS OF THE CULT

Provincial Games

A large number of athletic festivals were celebrated in the province of Asia on a regular basis during the Roman period, many of which are attested in the epigraphic record. One particular kind of festival—the κοινὰ Ἀσίας—was sponsored by the whole province under the auspices of the koinon. These provincial games are known to have been celebrated in eight cities: Pergamum, Smyrna, Ephesus, Kyzikos, Philadelphia, Laodikeia, Sardis, Tralles.¹

The view that the provincial games were associated with the provincial cults of the emperors is affirmed by nearly all scholars who deal with the topic. Deininger is one of the most explicit in this. He wrote that the provincial games, one of the major cultic activities of the koinon, were inaugurated in Pergamum with Asia's first provincial cult as pentaeteric games for Rome and Augustus. The growing number of provincial cult centers in Asia resulted in a growing number of corresponding provincial games that became known as κοινὰ Ἀσίας.² Price agreed with this scenario, although he held that there was a change in the frequency with which the games were celebrated.

At the beginning, the Pergamene games of Rome and Augustus, the only provincial games for over fifty years, were probably annual, but the gradual addition of seven more cities changed the system.³

Moretti has shown, however, that this supposed connection between provincial games and provincial cult does not conform to the extant evidence.⁴ He demonstrated convincingly that there was no connection between the κοινὰ Ἀσίας and the provincial cults. His first argument was that inscriptions commemorating victories of particu-

lar athletes show that several cities had provincial games before they had provincial imperial cults.⁵ For example, an inscription found near Rome lists victories in the provincial games at Laodikeia. The inscription can be dated to approximately 60 CE, when only Pergamum and Smyrna had provincial cults in Asia.⁶ Similarly, an inscription from Iasos informs us that a harp player by the name of Phantias was involved in provincial contests in Ephesus in the mid-first century CE.⁷

Secondly, Moretti pointed out that the city of Smyrna advertised itself as the first city to have established κοινὰ Ἀσίας.⁸ This would not have been possible if the games had been a part of the provincial cults, since Pergamum's provincial cult preceded that of Smyrna by over half a century.⁹

It seems, therefore, that the only games known to have been established by the koinon of Asia in conjunction with a provincial cult are those from the cult of Rome and Augustus in Pergamum. These games were probably not later than the cult, for an inscription dated to about the year 5 CE refers to the victory of a pentathlete from Kos in the "Romaia Sebastia (games) established by the koinon of Asia in Pergamum".¹⁰ The provincial highpriest of Rome and Augustus sometimes served as the "agonothete for life" of these games.¹¹

The eight cities known to have held κοινὰ Ἀσίας each had their own pentaeteric cycle, yielding an average of two provincial athletic competitions in Asia every year.¹² The frequency of the games of Rome and Augustus in Pergamum is more controversial. The more widely held view is that these were also pentaeteric games, but an

 6 γυμνασίαρχον τῶν δωδεκάτων
 Σεβαστῶν Ῥωμαίων τῶν πέντε
 8 γυμνασίων, ἀλείφοντα ἐγ λουτήρων
 δι' ὅλης ἡμέρας ἐκ τῶν ιδίων,
 10 προνοήσαντα τῆς τε αὐτῶν καὶ τῶν
 [ἐφ]ήβων ἀγωγῆς, νόμους τε πατρίους
 12 [καὶ ἥ]θη κατὰ τὸ κάλλιστον
 [ἀν]ανεωσάμενον.¹³

The *neoi* honored Gaius Julius Sakerdos, the neokoros of the goddess Rome and of the god Augustus Caesar, priest of Tiberius Claudius Nero, gymnasiarch of the five gymnasia for the twelfth Sebastia Romaia, who supplied oil in all the bathing basins throughout the day with (his) own (money), who cared for these and for the guidance of the ephebes, who revived the ancestral laws and custom regarding (what is) best.

If the Rome and Augustus games were pentaeteric and they began in 29 BCE, then the twelfth celebration would have occurred around the year 16 CE. In 16 CE, however, a priest of Tiberius Caesar Augustus would not have used the name that Tiberius had abandoned when he was adopted by Augustus in 4 CE. Magie pointed out that a biennial cycle would yield a date of 7/6 BCE for the twelfth competition; if the games were an annual event, the date would be 18/17 BCE.¹⁴ The later two dates are more plausible, but there is not enough evidence to decide the matter.

This leads to the conclusion that the κοινὰ Ἀσίας ἐν Ἐφέσῳ were not connected with the Cult of the Sebastoi in Ephesus. The games probably predated the cult. There is evidence, however, that other games were established in connection with the Cult of the Sebastoi.

¹⁴ Magie, *Roman Rule in Asia Minor to the End of the Third Century After Christ* (Princeton: Princeton University Press, 1950) 2:1297 n. 57. The epithet θεός for Augustus need not imply a date after his death, for this is a local document where the use of divine terminology is not restricted by Roman practice. See above, p. 22-23.

The Ephesian Olympics

An athlete from Iasos by the name of Titus Flavius Quirina Metrobius enumerated some of his victories in inscriptions set up in his native city. They are of interest to us because they give the earliest reference to Olympic games held in Ephesus. Near the beginning of a list of his accomplishments that is dedicated to Herakles, Metrobius mentioned winning once in the Olympics in Ephesus and twice in the provincial games of Asia in Ephesus.¹⁵ The inscription does not provide an accurate date, but another victory list set up by Metrobius helps remedy that problem.

An inscription with a dedication to Zeus Olympios by the same athlete in the 217th Olympiad informs us that he was the first inhabitant of Iasos to win the men's long distance race in all four of the major Panhellenic festivals,¹⁶ and that he was also the first person ever to win a competition in the Capitoline Games in Rome.¹⁷ The Capitoline Games were first celebrated in 86 CE by Domitian in honor of the rebuilding of the temple of Jupiter on the Capitoline Hill after it had been destroyed by fire. One of the prizes in the games was Roman citizenship, which means that Metrobius probably received the emperor's *gens* (Flavius) and tribe (Quirina) as a result of this victory. The date of the 217th Olympiad is also known: the games took place in Olympia in late August or early September in the year 89 CE.¹⁸ For these reasons, Moretti dated the first inscription with the reference to the Ephesian Olympics to about 90 CE.¹⁹

After the Metrobius inscription, there are no more attestations of Ephesian Olympics until well into the reign of Hadrian, but after about 125 CE, a great number of references to the festival accumulate.²⁰ This nearly forty-year gap in attestations is highly unusual, especially because it covers a period for which there is a great deal of extant documentation regarding civic affairs in Ephesus. The gap

²⁰ Over 30 references.

and the subsequent rapid flourishing of the games have led scholars to the conclusion that the Ephesian Olympics were begun as a festival for Domitian that had to be discontinued. The games were later revived for Hadrian and were celebrated at least into the third century.²¹

Domitian's connection to these early Ephesian Olympics is certain. Lammer pointed out that the Olympics were unusual for Ephesus because the city never had a strong cult for Olympian Zeus.²² Lammer exaggerated the dominance of Artemis over the cultic life of Ephesus, but it is true that Ephesian piety, and that of western Asia Minor in general, focussed much more on Zeus's twin children Artemis and Apollo than upon Zeus himself. In fact, the name of Zeus Olympios appears in only seven Ephesian inscriptions, six from the mid-second century CE, and one fragment that is too damaged to interpret.²³ In general, then, Zeus Olympios was not the recipient of major cultic honors in Ephesus.

The six well-preserved inscriptions which mention Zeus Olympios give an idea of the character of his veneration in Ephesus. All five are short dedications that read (with slight variations), Αὐτοκράτορι Καίσαρι Ἀδριανῷ Διὶ Ὀλυμπίῳ, "to Emperor Caesar Hadrian Zeus Olympios."²⁴ This seems to have been an Ephesian adoption of the Hadrian/Zeus connection manifested in Athens at the completion of the Athenian Olympieion.²⁵ When Hadrian arrived in Ephesus in 129 CE for his second visit to the city, he was acclaimed there also as Ζεὺς Ὀλύμπιος.²⁶ Thus, a strong imperial component was involved in the reintroduction of Olympic games in Ephesus under Hadrian, which is in accordance with what is known of other Olympic games of the Roman period established outside of Olympia.²⁷

This imperial aspect of the Ephesian Olympics was present also in the false start under Domitian. The fact that the games were dis-

²⁷ Lammer 1967, 2. Lammer provided a list of Olympic festivals in the Mediterranean world on p. 1, n. 1.

continued is an indication of their close connection to the emperor Domitian who suffered the *damnatio memoriae*. The provincial cult in Ephesus survived this crisis because it could be redirected toward other figures: Domitian dropped out, but Vespasian, Titus and perhaps Domitia remained viable recipients of cultic honors. The games honoring Domitian as Zeus Olympios, however, were doomed.

The numismatic evidence from Ephesus provides a significant image of the association of Domitian and Zeus Olympios. During his reign, the Ephesian mint produced a coin with the head of Domitian and the title Δομιτιανὸς Καῖσαρ Σεβαστὸς Γερμανικὸς on the obverse.²⁸ On the reverse is an image of Olympian Zeus, an unprecedented symbol in Ephesian coinage.²⁹ Zeus is seated left on a throne in the style of the world-renowned, chryselephantine statue from Olympia, with a scepter in his left hand.³⁰ The outstretched right hand, however, does not hold a Nike but the temple statue of the Ephesian Artemis. Around the image of Zeus is the inscription Ζεὺς Ὀλύμπιος Ἐφεσίων, "Zeus Olympios of the Ephesians."

The imagery of the coin goes beyond that which was evident on the "twice neokoros" coins examined earlier in chapter three.³¹ The "twice neokoros" coins elevated the relationship between Ephesus and the emperors to the status of the city's relationship to Artemis. The Zeus Olympios coin, however, made two new statements. It assimilated the emperor to Zeus,³² and it placed the emperor in a direct relationship to Ephesian Artemis. This represents a major reorganization of the city's divine hierarchy, but it is not unexpected, for this is essentially the same message designed into the terrace of the Temple of the Sebastoi where the emperors, housed above the ranks of the deities, presided supreme over the world. The coin differs from the imagery present in the temple terrace in that

²⁸ SNGvA 1879; *BM Ionia* 75 #215.

²⁹ See Giesela M. A. Richter, "The Pheidian Zeus at Olympia," *Hesperia* 35 (1966) 166-70, pl. 53-54; Steven Friesen, "Olympia," 15-16, 55-58, *ARNTS* 1.

³⁰ The scepter in the left hand was also a feature of the statue of Titus from the temple of the Sebastoi that was discussed above, p. 60-63.

³¹ See above, p. 56-59.

³² The placement of two images on either side of a coin does not necessarily imply an assimilation of the two images. In this case, though, the specific context in Ephesus of Olympic games honoring Domitian and the obvious symbolic potential of the emperor as supreme ruler lead to the conclusion that the head of Domitian and the classic figure of Olympian Zeus are not coincidentally on the same coin.

Fig. 5. The Ephesian Harbor Bath-Gymnasium and Environs. (after PWSup 12 [1970]).

the terrace precincts were related to several emperors, while the coin focussed solely on Domitian. This coin type occurred once under Domitian, and was not used again until late in the reign of Hadrian,

this time with the heir apparent Lucius Aelius Caesar on the obverse.³³

The Harbor Bath-Gymnasium

The largest building complex in the ancient city of Ephesus was the one now known as the Harbor Bath-Gymnasium (Fig. 5). European visitors in the eighteenth and early nineteenth centuries observed the tops of the baths' massive piers protruding through the topsoil and assumed this was the site of the Temple of Artemis.³⁴ J. T. Wood's excavations during the mid-nineteenth century located the actual site of the temple, leaving these remains unidentified.³⁵ Austrian excavators who began excavating the site of the Bath-Gymnasium complex during the closing years of the nineteenth century at first gave credence to the hypothesis that the area was the site of the Roman agora.³⁶ It soon became apparent that their excavations revealed a much more complicated set of buildings.

The complex consisted of three distinct but connected units. For the sake of analysis, I refer to them as the bath building, the palaestra, and the gymnasium.³⁷ Although the three units were of different sizes and heights, they shared a central axis and were joined at their eastern and western walls. The central axis of the entire complex was 360 m. long; the widest part of the complex, the gymnasium, measured 240 m. in width.³⁸

Disputes about the date when the complex was built have been mostly resolved. While Keil argued for a late second century CE

³³ *SNG Cop Ionia* 391.

³⁴ Otto Benndorf, "V. Erzstatue eines griechischen Athleten," *FiE* 1 (Vienna: Alfred Hölder, 1906) 181.

³⁶ Otto Benndorf, "Vorläufiger Bericht über die Ausgrabungen in Ephesos I." *ÖJh* 1 (1898) Beib. 64-65; idem, "Erzstatue," 183; Rudolf Heberdey, "Vorläufiger Bericht über die Ausgrabungen in Ephesos II." *ÖJh* 1 (1898) Beib. 71-77; idem, "Vorläufiger Bericht über die Ausgrabungen in Ephesos V." *ÖJh* 5 (1902) Beib. 59-61; idem, "Vorläufiger Bericht über die Grabungen in Ephesos 1902/3," *ÖJh* 7 (1904) 38-43.

³⁷ Later in this chapter I suggest that the inscriptional evidence indicates that the bath building and the palaestra were called the "baths" and the gymnasium was called the "xystos." See below, p. 135-37.

³⁸ A summary description of the complex can be found in W. Alzinger, "Ephesos. B. Archäologischer Teil," *PWSup* 12 (1970) 1608-11.

date on the basis of the forms of architectural fragments in the baths, he allowed that this date could be a little late, or might be based on pieces that came from later remodelings of the earlier building.³⁹ Miltner dated the baths to the late first century CE on the basis of epigraphic evidence.⁴⁰ While Alzinger agreed with this date, he extended it to the entire complex because the bath building was such an integral part of the complex that all three parts must have been planned, and probably built, as a single project.⁴¹

Three inscriptions are crucial to the dating argument. *IvE* 2.508 reproduces the text that was found on a statue base in the large hall of the bath building. The inscription named the proconsul, giving the precise date of 92/93 CE for the statue and base. Since the statue would have been part of the final ornamentation, the bath building must have been complete, or nearly complete, by that time.

A second inscription was found in one of the halls of the gymnasium.⁴² The modern name "Verulanus Halls" has been given to the gymnasium because this inscription names Gaius Claudius Verulanus Marcellus as the benefactor who provided the marble revetment for the halls. Since the inscription can be dated to 130/31 by the naming of the proconsul, some scholars have questioned the Domitianic date for the gymnasium. The excavation reports show, however, that the marble revetment was part of a later remodeling for it assumed a higher floor level than that of the original floor.⁴³

The third inscription confirms a Domitianic date for the complex. *IvE* 2.518 was also found in the halls of the gymnasium, but further north than the previous inscription, located at the monumental doorway connecting the gymnasium with the palaestra. The inscription, naming the donor of a statue group, included the name of the emperor Domitian that was later erased.

These arguments have resulted in a scholarly consensus that the Harbor Bath-Gymnasium is to be dated to the Domitianic period,

³⁹ J. Keil, "XVII. Vorläufiger Bericht über die Ausgrabungen von Ephesos," *ÖJh* 28 (1933) Beib. 14-20.

⁴⁰ Franz Miltner, "XXIV. Vorläufiger Bericht über die Ausgrabungen in Ephesos," *ÖJh* 45 (1960) Beib. 35.

⁴¹ Alzinger, *PWSup* 12 (1970) 1611.

⁴² *IvE* 2.430.

⁴³ The floor of the original building may have sunk because of the high water table in the area near the harbor. R. Heberdey, "Vorläufiger Bericht über die Grabungen in Ephesos 1902/3," *ÖJh* 7 (1904) Beib. 42-43.

although certain parts of the complex may have taken longer to complete.⁴⁴ It has not been previously noticed, however, that the Harbor Bath-Gymnasium complex—the only Domitianic building project in Ephesus larger than the precincts of the Temple of the Sebastoi—must have been related to the Cult of the Sebastoi.

No satisfactory explanation has ever been proffered as to why such a large bath-gymnasium was built in Ephesus at this time. Although literary sources do not address this question, the architecture suggests the answer, and the epigraphic evidence confirms this conclusion. The reason for the construction of these immense facilities was to provide the buildings necessary for conducting the Ephesian Olympics instituted in honor of Domitian.

Yegül's study of the bath-gymnasium complexes of Asia Minor is an invaluable resource for understanding the development of this type of building in the Roman period.⁴⁵ He demonstrated that the bath-gymnasium complexes joined two forms—a modified form of the Hellenistic Greek gymnasium and the Roman bath building—into a creative, though ambivalent, union. Although the known examples of this architectural genre display a variety of solutions to the challenge of combining the two forms, they all have a "family resemblance." Each consisted of a public bath building with strong western influences, directly accessible from a palaestra that developed the Hellenistic gymnasium tradition.

The details of his exposition and typology need not be elaborated here, for the main concern of this section is not the similarity of the Harbor Bath-Gymnasium of Ephesus with other bath-gymnasia but rather its distinctive nature. While Yegül occasionally alluded to this

⁴⁴ Alzinger, PWSup 12 (1970) 1610-11; Fikret Yegül, "The Bath-Gymnasium Complex in Asia Minor during the Imperial Roman Age," (Ph.D. diss., Harvard University, 1975) 88. Fasolo's criticisms of the generally accepted Domitianic dating are unconvincing; Furio Fasolo, *L'Architettura Romana di Efeso* (Bullettino del Centro di studi per la storia dell'architettura 18; Rome: Casa dei Crescenzi, 1962) 34-38. He does not indicate an awareness of the two inscriptions from the Domitianic period found in the complex (*IvE* 2.508, 518), but cites only the Hadrianic inscription that names Verulanus (*IvE* 2.430). His alternative proposal—a five-phase development of the Harbor Bath-Gymnasium complex—cannot be sustained by the extant evidence. Further excavations would be necessary to provide enough data to document five distinguishable phases of construction. Such a large complex would certainly take several years to finish, but the Domitianic inscriptions found in different areas show that the Harbor Bath-Gymnasium was usable before 96 CE.

⁴⁵ Yegül 1975, esp. 181-200, 218-22.

subject, he could not address the question systematically for his study was essentially synthetic.⁴⁶ It is still necessary to describe and explain the peculiarities of this particular complex within the framework of the typology he proposed.

The bath building at the far western end of the Harbor Bath-Gymnasium complex is noteworthy for its particularly clear arrangement of rooms. Entry to the large rectangular *frigidarium* (F) with *piscina* (cold water pool) was through the flanking halls. From here traffic could circulate clockwise or counterclockwise through rooms 1-3 and through the *tepidarium* (T) toward the *caldarium* (C) protruding from the middle of the second row of rooms. Thus, movement was clearly defined and given a limited number of options within a traditional set of bathing rooms.⁴⁷

The demand for public hot-water bathing facilities that spread throughout the Mediterranean world in the Roman period had its origins in Italian cultural patterns; this bath building is an example of the widespread use of the Italian building form in Asia Minor. It is unique among the known Asia Minor bath buildings in that the *caldarium* protrudes abruptly from the building's exterior in the style of Roman *thermae*.⁴⁸ Yegül summarized Western influence on this bath building in the following way.

The organization and the construction of the *caldarium* and the flanking halls of the *Thermae* of Titus [in Rome] show remarkable similarities of design and structure to the corresponding elements of the Domitianic (?) Harbor Baths in Ephesus. . .⁴⁹

While the bath building of the Harbor Bath-Gymnasium is not unusual for this kind of complex in Asia Minor, the *palaestra* component (P) must be distinguished from other *palaestrae* of the time, whether in the east or the west, for no attempt was made to incorporate the Ephesian baths and the gymnasium into a rectangular architectural unit. Both components were aligned to the same central axis and direct access from one to the other was provided by

⁴⁶ Yegül 1975, 144-47.

⁴⁷ Yegül (1975, 145) described this arrangement as so orderly as to be overly literal and lacking in dynamism or drama.

⁴⁸ Yegül 1975, 298 n. 289. The second century CE baths in Aizanoi may be similar, but the complex is only partially excavated and the *caldarium* protrudes only slightly from the external facade. Fig. 7.

⁴⁹ Yegül 1975, 193. For the Baths of Titus, see Fig. 11.

Fig. 6. Plan of Miletus Highlighting Bath Buildings. (after Akurgal, 214).

doors between them, but the Harbor palaestra was intentionally portrayed as a distinct, although related, unit. Rather than designing a single linear facade for the two units, the architects planned a bath building with two variations in its own width that are both different from the width of the palaestra. This was a deliberate deviation from Asia Minor practice (Fig. 6: the Capito Baths built 47-52 CE, and Hume-i Tepe Baths of the late first century CE, both at

Fig. 7. Reconstructed Plan of the Bath-Gymnasium at Aizanoi. (after Broedner, 78).

Miletus; and Fig. 7: Bath-Gymnasium at Aizanoi) and from western models (Fig. 8-12).

The large gymnasium of the Harbor Bath-Gymnasium complex also deviated from standard practices in several respects. First, the inclusion in the complex of a third building—the gymnasium—is unparalleled. The only example which has any resemblance to this arrangement is the Capito Baths of Miletus which were built next to a gymnasium, but no evidence of direct access between the establishments has been found.⁵⁰ Secondly, the size of the gymnasium

⁵⁰ This calls Yēgūl's terminology into question. His category "bath-gymnasium" actually deals with complexes that correspond to the bath building and the palaestra of the Harbor Bath-Gymnasium, and were simply called "baths" in inscriptions (see p. 135-37). The term may be influenced by his work on the later "bath-gymnasium" at Sardis, which has a very large courtyard next to the bath building. The use of the term, however, draws attention away from the unique, three-fold design of the Harbor Bath-Gymnasium.

Fig. 8. The Baths of Agrippa at Rome. (after Heinz, 62).

(200 × 240 m.) required that this related building also be distinguished from the other two components of the complex, for its width was almost double that of the adjoining palaestra. Finally, the interior arrangement is that of a “pure gymnasium.” There were no rooms incorporated into any part of this component. It consisted solely of colonnaded halls, or *ξυστοί*,⁵¹ arranged around an open courtyard. No comparable building has been found in Ephesus or elsewhere in Asia Minor, or in Italy. Not even the Hellenistic

⁵¹ Technically, *ξυστός* indicated a covered, indoor exercise area or running track, often long enough for a one-stade sprint to be run (approximately 200 m. long). In general usage, it could also signify an entire gymnasium.

Fig. 9. The Baths of Nero at Rome. (after Broedner, 49).

gymnasia of Miletus (Fig. 6) or Priene (Fig. 13) are designed in this manner.

Only one explanation accounts for the particular character of the Harbor Bath-Gymnasium. This complex was designed as a conscious development of the athletic facilities in Olympia (Fig. 14), so that the home of the original Olympic games would provide the architectural model for the Ephesian Olympics.⁵²

The palaestrae at the two sites are so similar that the first excavator of the Ephesian site commented on this.⁵³ Both palaestrae are almost exactly square buildings around a colonnaded courtyard with rooms behind the colonnades, and both provide access to their respective gymnasia through a door in the middle of one side. The Harbor palaestra in Ephesus is not a strict imitation, though, for it is much larger⁵⁴ and its predecessor's long room opposite the gym-

⁵² For a description of the palaestra and gymnasium in Olympia, see Alfred Mallwitz, *Olympia und seine Bauten* (Athens: S. Kasas, 1981) 278-89; Steven Friesen, "Olympia," 21-29, *ARNTS* 1 (Philadelphia: Fortress, 1987).

⁵³ Otto Benndorf, "Erzstatue," 183-84; Josef Keil ("XVII. Vorläufiger Bericht über die Ausgrabungen von Ephesos," *ÖJh* 28 [1933] Beib. 20) noted Benndorf's observation, but it has been mostly ignored elsewhere in the literature.

⁵⁴ Olympia: approx. 54 m. square; Ephesus: approx. 119 m. square.

Fig. 10. The Stabian Baths at Pompeii. (after Heinz, 56).

nasium side has been replaced by the long wall of the Harbor bath building. The Harbor palaestra has also regularized the room arrangement behind its colonnade, most noticeably with two "Marble Halls"⁵⁵ on the north and south sides, and has enlarged the entry

⁵⁵ For a summary of the evidence for the Marble Hall, or "Kaisersaal," as an imperial cult room, see Fikret Yegül, "A Study in Architectural Iconography: *Kaisersaal* and the Imperial Cult," *Art Bulletin* 64 (1982) 7-31. Price (1984b, 144, esp. n. 34) is more reserved in his assessment of the evidence. The interest of this chapter is not whether a certain room was used for imperial cult activities, but whether the entire complex was associated with the Cult of the Sebastoi.

Fig. 11. The Baths of Titus at Rome. (after Heinz, 76).

to the gymnasium.⁵⁶ These changes do not alter the essential character of the building but rather modify details of the late Hellenistic model to meet early Imperial tastes.

By the first century CE, the gymnasium area at Olympia had developed into an enclosed area of considerable dimensions. Although changes in the course of the Kladeos River have destroyed the remains of the western side, the excavated South and East Halls provide information about the ancient world's most important Greek gymnasium. The East Hall was a two-aisled *ξυστός* where indoor sprinting could take place. It measured 220 m. in length which would have been long enough to practice a sprint the length of the Olympic stade.⁵⁷ The South Hall was built as a standard stoa,

⁵⁶ The Olympia palaestra was built in the third century BCE. The door that gave access to the gymnasium was a pragmatic renovation after the construction of the gymnasium's South Hall in the early second century BCE. This sequence of construction, however, would have been neither obvious nor relevant to a first century CE architect.

⁵⁷ An Olympic stade, the distance between the starting and finishing lines in the stadium at Olympia, was 198.28 m.

Fig. 12. The Baths of Trajan at Rome. (after Heinz, 86).

whose back wall was punctuated by occasional doors to allow access to the south.

The Harbor gymnasium in Ephesus was built to accommodate the same functions with a few more contemporary details.⁵⁸ The strong connection of palaestra and gymnasium was retained and

⁵⁸ Rosanna Maccanico commented on the canonical Hellenistic design of the Harbor gymnasium in Ephesus, and mentioned in passing its similarity with the gymnasium at Olympia; "Ginnasi Romani ad Efeso," *Archeologica Classica* 15 (1963) 50. The Harbor gymnasium might have replaced a Hellenistic gymnasium on the same site, but the high water table in the area has prevented extensive excavation.

Fig. 13. Plan of Priene, with Gymnasia Highlighted. (after Akurgal, 186).

emphasized with a large entryway, and the two buildings were adjusted to an axial arrangement in keeping with the Hellenistic urban planning tradition of western Asia Minor. The dimensions of the gymnasium and its placement in the city, however, indicate its importance for the city as a whole. According to Yegül,

[The Harbor gymnasium's] size and position leave no doubt that it was primarily conceived to serve the city as a major and autonomous gymnasium establishment although it was combined in a grand planning gesture of urban environmental control. . . .⁵⁹

The north and south halls of the Ephesian gymnasium served as *ξυστοί*, measuring 200 m. which was in accord with the shorter Ephesian stadium. Four gates directed pedestrian traffic to the middle of the east and west halls and to the northeast and southeast corners, presumably to avoid crossing the running areas in the north and south halls. The most significant innovation was the use of the three-aisled hall that was recommended by Vitruvius.⁶⁰

⁵⁹ Yegül 1975, 175.

⁶⁰ Vitruvius, *de arch.* 5.11.3. He advised that the middle aisle in such a hall be at a lower level so that it could be used as a practice track where no one would accidentally walk into the path of a runner. There is no evidence, though, that the Ephesian gymnasium had lower middle aisles.

Fig. 14. The Palaestra, Gymnasium, and Western End of Precincts at Olympia.
(after Mallwitz).

In Olympia, there was no bathing facility directly accessible from the palaestra, except for the palaestra rooms designated for washing. Although there were Greek and Roman period baths near the palaestra's southwest corner, these were not contiguous with the complex. Thus, the Ephesian bath building was the Harbor Bath-Gymnasium's most important departure from the Olympian model. The bathing facilities do not dominate the design as they did in other Asian complexes, though. The palaestra court occupies a larger area relative to the bath building than is the case at most other bath-gymnasia in Asia Minor. Once the gymnasium area is taken into consideration, it becomes clear that the athletic area of the Harbor Bath-Gymnasium was its most prominent feature.⁶¹

The distinctive features of the Harbor Bath-Gymnasium, can be explained, therefore, as the result of an early Imperial adaptation of a Classical model. Although the actual buildings at Olympia are Hellenistic by our periodization,⁶² for first-century Ephesians they represented an ancient, Panhellenic institution. The Ephesians chose the facilities of the most venerable athletic festival in the Greek world rather than the more immediately available models, such as those at Miletus or Priene, as a basis for the city's largest building complex. They used the Olympic model, however, in such a way as to meet contemporary expectations of axiality and symmetry, and the growing demand for public hot-water bathing facilities.

Properly understood, the epigraphic evidence confirms the identification of the Harbor Baths with the Olympic games for Domitian. Several Ephesian inscriptions mention baths by name without any other clues about the building to which they refer.⁶³ One of these is the name βαλανεῖα Σεβαστῶν/Σεβαστοῦ ("baths of the Sebastoi/Sebastos") that occurs in three inscriptions. This has been interpreted as a possible reference to the mid-second century Vedius Baths⁶⁴ situated to the north of the Ephesian stadium, because the

⁶¹ Later Ephesian bath-gymnasia have a progressively smaller proportion of space devoted to sports and an increasingly large amount of space for bathing; Maccanico "Ginnasi," 47. While this is a valid observation (Fig. 15), the immense size of the Harbor Bath-Gymnasium complex has skewed the data. Furthermore, once the Harbor gymnasium was planned and built, the city had no need for another large gymnasium. Thus, later complexes did not need to provide so much space.

⁶² Erika Brödner, *Die römischen Thermen und das antike Badewesen* (Darmstadt: Wissenschaftliche Buchgesellschaft, 1983) 56.

⁶³ These are summarized in Alzinger 1970, 1620-21.

⁶⁴ Alzinger 1970, 1620-21. No. 21 in the Plan of Ephesus, p. XVI above; and, Fig. 15.

sixth-century chronicler Malalas recorded that Antoninus Pius founded a bath (λουτράριον) in Ephesus which was named after him, and Pius's name was found on an architrave fragment from the Vedius Baths.⁶⁵ The name "Baths of the Sebastoi" does not specify Antoninus Pius, but the identification is possible. A different interpretation has more to commend it, however.

All three references to the Baths of the Sebastoi occur in reference to an official: "the highpriest of the whole Xystos (who is) also over the Baths of the Sebastoi."⁶⁶ In addition, two of the inscriptions call the official a "xystarch."⁶⁷ Two aspects of these titles suggest that they refer to the Harbor Bath-Gymnasium rather than to the Vedian Baths built during Antoninus's reign. The phrase "the whole Xystos" only makes sense in relation to a large enclosure like the Harbor gymnasium. None of the other known baths or gymnasia in Ephesus have halls suited to such a description. Secondly, the title makes a distinction between the baths and the *xystos*, a situation which fits the Harbor complex, with its distinctive components, better than any other (Fig. 15: Bath Designs at Ephesus).

The crucial evidence, however, is not in the texts of the inscriptions but in their findspots. Two of the three were discovered far from the Vedius Baths in the area of the Harbor complex: *IvE* 4.1125 was found built into the Byzantine wall that is on the opposite side of the Arkadian St. from the site of the Harbor Bath-Gymnasium, and 4.1155 was found in debris on the Arkadian St.⁶⁸ Furthermore, another fragmentary inscription that again names the individual from 1155 as highpriest of the whole xystos was found inside the Harbor gymnasium.⁶⁹

⁶⁵ Alzinger 1970, 1620-21; and Malalas 11.25.

⁶⁶ *IvE* 4.1104 l. 3-6: ἀρχιερέως τοῦ σύνπαντος ξυστοῦ καὶ ἐπὶ βαλανείων τῶν Σεβ(αστῶν). *IvE* 4.1125 l. 3-5: [ἀρχι]ερέως τοῦ σύνπαντος [ξυστο]ῦ διὰ βίου, ξυστάρχης [καὶ] ἐπὶ βαλανείων τῶν Σεβ(αστῶν). *IvE* 4.1155 l. 3-8: [ἐπιμεληθέντος] Μ. Οὐλ[πίου Δομεστί]κου παρα[δόξου ξυστά]ρχου, [ἀρχιερέως] τοῦ σύν[παντος ξυστο]ῦ καὶ ἐπὶ [βαλανείων Σεβ]αστοῦ.

⁶⁷ In *IvE* 4.1125 and 1155, the official is also a xystarch; the latter inscription has "Sebastos" in the singular. *IvE* 4.1104 has no reference to a xystarch but uses the plural "Sebastoi."

⁶⁸ The third inscription was found in a fig orchard outside of Ephesus.

⁶⁹ [Μάρκος] Οὐλλίπιος
[Δομεστικός] ὁ ἀρχιερέως
[τοῦ σύνπαντος ξ]υστοῦ
[]ν ἅπασι. . .
IvE 4.1089, l. 3-7

Fig. 15. Bath Designs at Ephesus. (after PWSup [1970] 1608-18).

Thus, the Harbor Baths (i.e., what is referred to in this chapter as the bath-building and the palaestra) must have been known as τὰ βαλανεῖα τῶν Σεβαστῶν: “the Baths of the Sebastoi.” The gymnasium portion of the complex was called the “Xystos” and was closely related to the “Baths” in terms of architecture, athletic activity, and cultic institutions.⁷⁰

The complex was named for the Sebastoi because it was built for the Olympic games established in conjunction with the provincial Cult of the Sebastoi in Ephesus. The appearance of the singular in *IvE* 4.1155 may come from Domitian’s lifetime when the baths may have been named for him alone. Since no reference is made to the koinon in relation to the the Ephesian Olympics or the buildings, both the games and the related facilities were municipal projects sponsored by the city of Ephesus.

The Date of the Ephesian Olympics

We must now return to the inscriptions related to the inauguration of the Temple of the Sebastoi, for they contain vital evidence for the date of the Olympic games in Ephesus near the end of the first century CE.

An often overlooked feature of the inscriptions from the Temple of the Sebastoi is the existence of an erasure from 3 1/2 to 4 lines long on four of the inscriptions (those dedicated by Aphrodisias, Silandos, and both copies from Aizanoi).⁷¹ The erasures occur at a highly significant point, the end of the inscriptions, after the high-priest’s name. While at first glance it may seem that the original text is no longer recoverable, a consideration of the possibilities can give us a good idea of what the erasures were meant to conceal.

The key to reconstructing the lost text is the intentionality of the erasures. Someone carefully chiseled away not more than about 110 characters from a specific point in certain inscriptions. This must have taken place at the same time as the Domitian erasures, i.e., 96 CE, for there is no other known reason for such a thoroughgoing erasure of inscriptions in Ephesus at that time.

⁷⁰ There are also two inscriptions that refer to a gymnasium of Sebastos: *IvE* 3.633 (γυμνασίαρχον τοῦ Σεβαστοῦ γυμνασίου) and 661 (ἐν τῷ Σεβαστῷ γυμνασίῳ). While this title might refer to the Harbor gymnasium, there is no evidence in the text or the context that directly supports such an interpretation.

⁷¹ There are also two inscriptions whose endings are no longer extant, one from Synaos (*IvE* 6.2048) and an inscription of unknown provenance (*IvE* 2.242).

The examination in chapter two of the elements of the pattern of the inscriptions suggests that the erasure was made in a part of the text that contained the names and positions of wealthy citizens from the cities of Asia. The office would have been related in some way to the Cult of the Sebastoi for it was placed after the name of the provincial highpriest as a closing for the inscription. Was the erasure due to the listing of a person, or an office, or both?

The question of whether the erasure eliminated a reference to a person who was too closely linked to Domitian is intriguing. The evidence from Ephesus, however, shows that this hypothesis is untenable. First of all, every member of the provincial elite mentioned in these inscriptions was thereby connected to Domitian. Why should any one of them have been singled out? Tiberius Claudius Aristio appears to have played an especially prominent role in organizing and funding the new cult, yet he suffered no censure and continued to play a prominent role in the city's administration for at least another 30 years.

After the death of Domitian, there was no stigma attached to activities connected with the emperor Domitian. The provincial elite continued to function without apparent disturbance or interruption. Public offices held under the Flavians, including Domitian, were publicly commemorated in the inscriptions like those from the Celsus Library (built ca. 125 CE) in Greek and in Latin. Although Domitian's personal name was not recorded, his generic titles were used in such a way that the identity of the emperor was clear.⁷² Strong political loyalties to the Flavians did not cause problems for the elite of the province of Asia.

If the erasure was not designed to eliminate references to an individual, was it intended to remove the name of an office? It has been suggested that the erasure may have mentioned a neokoros of the temple.⁷³ The office of neokoros, however, was never a problem. Two other references to a neokoros were not excised from the inscriptions dedicated by Stratonikeia and Tmolos. If the person who held the office of neokoros had been suspect, only that individual's name would have been removed. Thus, we can be certain that the erasures did not mention a neokoros of the Temple of the Sebastoi.

⁷² See Steven Friesen, "Ephesus A," *ARNTS* 2 (forthcoming).

⁷³ *IvE* 2.232 commentary.

The contents of the original text were related to a different office. The chronological chart of the inscriptions (above, p. 46-47) demonstrates that the erasures, like the references to the neokoros of this temple, are not found in inscriptions from various dates. The erasures all come from one short period, the months when Gillo was proconsul and Ti. Cl. Pheseinos was highpriest, i.e., September 23, 89 CE through mid-summer, 90 CE. The last two inscriptions, dated later than this, did not contain the offending phrases, for they were not edited by the stonemasons. The phrases that were erased in 96 CE related to something that lasted for less than a year in 89/90.

The obvious solution is that these erasures related to the short-lived Olympic games established in Ephesus in honor of Domitian. The original inscriptions must have named the agonothete who sponsored these games in honor of Domitian. If correct, this allows us to date the games accurately to 89/90 CE.⁷⁴ We can even suggest a precise day on which the festivities began, for the province of Asia tended to celebrate provincial imperial festivals on the birthday of the emperor involved.⁷⁵ The most likely date for the festival to start, then, would have been Domitian's birthday—October 24 of the year 89 CE.⁷⁶ Since the original Olympic games in Olympia ran for five days during the early Imperial period, the Ephesian games may have lasted through October 28.⁷⁷

⁷⁴ I am inclined to think that this was the first celebration of the Ephesian Olympics because it seems to have coincided with the opening of the temple, because there are so few extant references to the games, and because construction of the bath-gymnasium complex would have taken several years. Since the games were technically separate from the provincial cult of the Sebastoi, however, it is possible that the games began four years earlier in 85/86. The games were probably held a second (or perhaps third) time in 93/94. Another inscription with no apparent connection to the Cult of the Sebastoi (*IvE* 7,1.3005) has the same type of erasure found in the temple inscriptions. It comes from the Domitianic period and deals with the benefactions of an Alexandrian family living in Ephesus. This inscription should also be dated in the autumn either of 89 or of 93 CE.

⁷⁵ For Augustus, *IvPr* 105; for Tiberius, *IvE* 7,2.3801 II (*Hypaipa*).

⁷⁶ The inscriptions from Iasos mentioned above (p. 146) record that T. Fl. Metrobius won a long distance running event in the original Olympics in 89 CE. This date in late October would have allowed Metrobius enough time to return from the 217th Olympiad in order to participate in the Ephesian Olympics.

⁷⁷ Lammer (1967, 20) also thought that Domitian's birthday was a likely date to begin the festival, and that it could have lasted five days because of the Olympic model, but he was not certain of the exact year.

It may also be possible to name the agonothete in our proposed reconstruction of the original text. On the basis of his service both as highpriest and neokoros in the other inscriptions from the Temple of the Sebastoi, Ti. Cl. Aristio is the most likely candidate. Inspection of the inscriptions shows that his alleged service as agonothete occurs precisely between Aristio's other two offices. If this is the case, it means that Aristio is the first known highpriest and temple neokoros in the Ephesian provincial cult as well as the first agonothete of the Ephesian Olympics, and that his name appeared at the end of all of the temple inscriptions in one function or another.

Since there is a high probability that the erasure removed references to the Ephesian Olympic games, and a possibility that the officeholder was none other than Aristio, the following reconstruction can be proposed for the original text that was removed. The original text may have read: καὶ ἀγωνοθετοῦντος τῶν μεγάλων Ὀλυμπίων Δομιτιανείων τῶν ἐν Ἐφέσῳ Τιβερίου Κλαυδίου Ἀριστίωνος, "and when Tiberius Claudius Aristio was agonothete of the Great Olympic Domitianeia in Ephesus."

Summary

In this chapter evidence has been presented to show that the provincial Cult of the Sebastoi in Ephesus was accompanied by an athletic festival which was modeled on the Panhellenic Olympic games. The games were not a provincial institution, but a municipal initiative. They were not established for a group of emperors; rather, the games focussed only on Domitian and identified him with Zeus Olympios. The games were held for the first (or possibly second) time between September of 89 and June of 90, perhaps on October 24-28, 89 CE.

In order to provide appropriate facilities for the city's new Olympic games, Ephesus constructed the largest known bath and athletic complex in western Asia Minor. While the buildings included certain contemporary features such as the Roman bath building and the Marble Halls, in its overall design the complex was an adaptation of the palaestra-gymnasium arrangement at Olympia.

After the assassination of Domitian in 96 CE, the games were discontinued, but the bath-gymnasium complex, known as the Baths of the Sebastoi (or Sebastos), remained a prominent municipal

institution. It was apparently in this gymnasium that Apollonios of Tyana is reported to have had a vision of the death of Domitian at the time the emperor was assassinated.⁷⁸ Philostratos does not seem to be aware that the vision took place in a building constructed in honor of Domitian, but the irony would certainly not have been lost on Ephesians hearing the story in the late first or early second century CE.

⁷⁸ Philostratos, *Vit. Apol.* 8.26. The comment that Apollonios was discoursing in the groves of the *xystoi* (διαλεγόμενος γὰρ περὶ τὰ τῶν ξυστῶν ἄλση) probably refers to the Harbor gymnasium. Since there were no rooms in the gymnasium, lectures or discussions would have taken place in the stoas or in the landscaped courtyard.

CHAPTER SIX

CULT, CITY, PROVINCE, EMPIRE

The Cult of the Sebastoi had implications for many spheres of life both in the province of Asia and beyond. The institutions, values, and activities which it included touched the lives of many communities and individuals. The primary interest of this study is the question of what the Cult of the Sebastoi did to and for the inhabitants of Ephesus and of Asia. In pursuing this question, it is important to remember that the task of analysis is not to simplify such phenomena, but rather to elucidate their complexity.

The task is made more difficult by gaps in the evidence. Many pieces of the puzzle are missing and are, perhaps, lost forever. We have no descriptions of the details of the normal ritual activities and there are no eyewitnesses to listen to nor informants to question. But we do have some indication of how mythology was used in the cult. In addition, we possess a significant body of data that can be re-assembled and assessed through the work of the disciplined imagination in order to present a coherent reconstruction of the significance of the provincial Cult of the Sebastoi for Ephesus and for the province of Asia as a whole. But first of all, two methodological questions should be addressed.

Imperial Cult

What sort of phenomenon is "imperial cult?" Most studies on this topic have discussed the evidence as if all examples of cultic honors for emperors can be used as data to explain a more or less uniform phenomenon. This approach has allowed a certain amount of progress to be made in our understanding of the topic but has proven itself to be unsatisfactory as a hermeneutical framework. The diverse nature of the evidence for imperial cults will prevent any study from obtaining detailed conclusions if that study is predicated on the assumption that "imperial cult" was a static phenomenon, rather than a modern reification of a group of ancient cults, each of which had its own historical and cultural context.

This is an important methodological problem in Simon Price's

landmark study *Rituals and Power: The Roman imperial cult in Asia Minor*. Price's book has been rightly acclaimed as a major advance in the study of imperial cults. It is exceptionally informative, methodologically sophisticated, nuanced, and full of insight. In my research I have consulted it repeatedly and benefited greatly. On the issue of historical development, however, Price chose to emphasize continuity above change. His argument for the choice was twofold: the gaps in the surviving data require a wide-ranging search for evidence, and the fundamentally static urban institutions allow for generalized conclusions. He summarized his orientation in this way.

The evidence, though plentiful, is very scattered in both time and place. . . In order to handle this dual diversity of place and time [this] book generally offers a synchronic analysis which assumes that the archetypal Greek city, whose institutions were relatively uniform, provides an adequate framework in which to slot evidence from different places.¹

It would not be fair to say that Price ignores historical developments in his analysis. In fact, he makes several important observations about such processes.² The problem lies in the fact that the conceptual framework defines these developments as secondary shifts within a relatively unchanging phenomenon.³ As a result, it is difficult to describe the changes precisely and even more difficult to relate them to the evolution of social structures during the period in question.

These weaknesses become evident in three ways. The first problem is that this theoretical orientation cannot adequately account for changes in cult that occur over time within a particular region. The evolving nature of provincial cults in Asia from those devoted to the emperor and another person or institution, to cults

¹ Price 1984b, 4-5. The quote goes on, "It does, however, also analyse historical developments, the range of the imperial cult in towns large and small, and the diversity of cultures in the area."

² See for example his chapter 3 (p. 53-77). Price also mentions the "changing nature of the Greek city" in relation to changes in hero cults during the Hellenistic period (p. 36) but he does not explain how this is to be reconciled to his assumption of an unchanging municipal system.

³ Note the undefined relationship between the singular "cult" and the plural "cults" in the following quote. "The imperial cult was far from being a static, monolithic structure, erected once and for all. Cults were constantly being invented and revised." (p. 61) What is "the imperial cult" and what part do individual "cults" play in it?

devoted solely to an emperor or emperors cannot be explained if the archetypal Greek city is assumed to be ever present. The Greek cities underwent fundamental changes between the times of Alexander and Constantine, and even within the Roman imperial period.⁴ This is what we would expect in an area like western Asia Minor where multicultural influences and established international trade routes were facts of life.

More importantly, the use of the Greek city as a framework for organizing diverse data cannot account for the invention of "provincial imperial cults" in the early Augustan period. Municipal and individual cults of rulers were known before this time but no Greek or Roman cults, either for rulers or for others, had been organized on a regional basis. The unprecedented spread of such institutions in the second century indicates that new social relationships were in formation.

A second problem for Price's orientation is that contemporaneous religious groups and institutions from the Graeco-Roman world could vary greatly, even when devoted to the veneration of the same deity. Two analogies illustrate this problem. What degree of precision could be gained about the worship of Demeter if Demeter cults were treated as a single phenomenon? Data would be gathered from throughout the Mediterranean world, with evidence from Andania in Messenia⁵ being given approximately equal value to the evidence from a cult like the one on the Pergamene Acropolis.⁶ Such an approach would result in certain generalizations about "Demeter cult," but dramatic differences would be overlooked among cults such as the Athenian women's rites known as the Thesmophoria,⁷ the mysteries celebrated with international participation at Eleusis,⁸ and the rites practiced in the sanctuary on the

slopes of Acrocorinth.⁹ While the analogy between Demeter cults and imperial cults has its limits, it nevertheless illustrates the methodological problem of treating imperial cults as a supralocal phenomenon.

Christian groups¹⁰ of first century Asia provide a second analogy. The day is long past when early Christianity could be considered a homogenous phenomenon;¹¹ even regional distinctions have limited descriptive value for our understanding of the character of these groups. For example, Koester characterized the situation in Ephesus at the end of the first century CE in this way.

Several rival Christian groups (whether they were organized as separate institutions is difficult to know) must have existed simultaneously [in Ephesus]: the originally Pauline church, supported by the Qumran-influenced Paulinist who wrote Ephesians, but also represented by the author of Luke-Acts who in his own way accommodated the tradition of the great apostle to the expedencies of the church; a Jewish-Christian "school" engaging in a daring interpretation of the Old Testament (an early gnostic like Cerinthus would fit this description rather well); a heretical sect, called the Nicolaitans by the Apocalypse of John (Rev. 2:6); and finally, a Jewish-Christian conventicle which was led by the prophet John, and which produced the book of apocalyptic revelations which has been preserved under his name.¹²

A third problem is that imperial cults may have been even more diverse than other cults because they honored many different individuals and several families. Although these all offered cultic honors to political leaders, we should not assume that they necessarily had to share the same features. Imperial cults did not comprise a static phenomenon; they were a series of historically-contextualized, culturally-conditioned institutions. The analyst must discover and explain not only their commonalities but also their distinctive features.

Human or Divine?

A second question of method in the interpretation of imperial cults has been the agenda of the interpreters. One prominent concern of the interpreters has been the ascribed ontological status of the emperors. This concern manifests itself in the scholarly debate about whether the ancients actually thought the emperor was divine. It has been hard for modern western scholars to answer this question in the affirmative, since the recipient of imperial cult was manifestly (to us, at least) human and not divine. The result has been some rather cynical interpretations, like that of Kenneth Scott,¹³ as well as more refined positions. Price has outlined this problematic history of interpretation and pointed out many of the difficulties.¹⁴ Of immediate interest here is his own synthesis of the evidence.

Price eschewed the traditional way of framing the question in terms of "politics vs. religion." Rather than accepting this dichotomy, Price tried to explain a tension he observed in the extant evidence for imperial cult. On the one hand, the evidence acknowledges that the emperors belong in the divine category.

Some parts [of the ritual system] treated the emperor like a god. The ceremonial of the imperial cult was closely modelled on divine ceremonial. Imperial temples and their images were called by the same names . . . as those of the traditional gods. They also looked identical . . . The image of the emperor, despite being partially controlled by Rome, was largely comprehensible within divine categories. Sacrifices were sometimes offered to the emperor as to a god. So too the emperor was called *theos* (god) and the main aim of the cult was to display piety (*eusebeia*) towards him.¹⁵

On the other hand, Price detected certain aspects of imperial ritual that were more restrained in attributing divinity to the emperors. He found support for this primarily in four phenomena: the placement of imperial statues in precincts of traditional gods; details of sacrificial practice; the use of the term *eusebeia*; and, double prayers

¹³ In the preface to *The Imperial Cult under the Flavians* ([Stuttgart-Berlin: Kohlhammer, 1936; reprinted N.Y.: Arno, 1975] no page number), Scott wrote, "It appears that much of the cult of the Flavian family was the result of shameless flattery or was dictated by political motives."

¹⁴ Price 1984b, 7-19.

¹⁵ Price 1984b, 231-32.

directed both *to* the emperors and to the gods *on behalf of* the emperors.¹⁶

Price explained the tension between the ascription of deity to the emperors and the reluctance to deify them completely with the following conclusion. By placing the emperors in the divine category, and yet distinguishing them from the gods, the Greeks put the emperors in an intermediate position between divine and human. This did not break down the old categories of divine and human. Rather, the experience of imperial power was very similar to divine power and actually functioned to reinforce the cults of the traditional gods. In this way the emperors became the focal point between the divine and the human.¹⁷

The first observation by Price—that the emperors were represented in the divine category—is in agreement with the evidence from the Cult of the Sebastoi at Ephesus. The buildings were religious—a temenos with temple and altar. In the temenos there were statue bases referring to εὐσέβεια toward the Sebastoi. The fragments of the temple statue depict Titus with the iconography of divinity. Religious functionaries were appointed; religious games were established. The only distinction between emperor and deity in any extant evidence is a reticence to use the word θεός in reference to Domitian, which should be understood as a concession to the requirements of the Roman Senate for approval of provincial cults. For those who established the cult, the use of religious traditions in the imperial cult was quite appropriate.

The second observation—the alleged distinctions between emperors and gods—produces the tension that generates Price's conclusion. It is supported primarily by Price's arguments regarding the relative status of emperors and traditional gods in a given precinct,¹⁸ and his reading of the evidence for imperial sacrifices.¹⁹ Earlier in this study I showed that the subordination of emperors to traditional deities in the temples of the gods was a symbolic repre-

¹⁶ For a concise summary, see Price 1984b, p. 232-33.

¹⁷ Price 1984b, 233. Price rightly rejected hero cults as the background for imperial cults. The power of heroes was limited, and was manifest only after their death (p. 32-36, 233). Emperors, on the other hand, were most deserving of worship while alive. Cults for emperors were established during their lifetimes and only rarely after their death.

¹⁸ Page 146-56.

¹⁹ Page 207-27.

sentation of the place of that emperor in that precinct, and not a general statement about the divinity of the emperors. In imperial temples like the Temple of the Sebastoi, statues, architecture, and dedications focused on the emperors with the gods in a subordinate position.²⁰ This means that the issue of sacrificial ritual is the crucial argument for Price's conclusion that a distinction was made between the emperors and the traditional deities. A detailed examination of this issue is necessary.

Simon Price is one of the few modern writers on imperial cult to take sacrifice seriously. His thesis was that imperial sacrifices were nearly always made to a deity *on behalf of* the emperor, and only seldom *to* the emperor.²¹ The sacrifices on behalf of the emperors conveniently left the relationship of the emperors to the gods unexplained, according to Price.²² The sacrifices to the emperors were not petitionary, but were restricted to offerings of honor and gratitude, which left the relationship of emperors to humans ambiguous.²³

In the Greek world, however, the offering of such sacrifices [directly to the emperors] remained a troublesome activity because of the failure to create a clear intermediate category for the emperor between human and divine. In Greece, as also in Rome, where no clear relationship was established between the categories of *deus* and *divus*, the institution of the imperial cult produced a system whose relationship to both gods and men was ambiguous.²⁴

My examination of the evidence from Asia leads me to conclude that Price has created the alleged distinction between the emperors and the gods by organizing selected data about sacrifice in a particular threefold manner: sacrifices on behalf of the emperors, "possible" sacrifices to the emperors, and "ambiguous" evidence. Price assumed that sacrifices on behalf of the emperors were normative and that they suggested some sort of hesitation in divinizing the rulers and their families.²⁵ In the section on sacrifices directly to the imperial family, his discussion did not explore the clear import of the texts, but rather asked how they might possibly be considered

²⁰ Above, chapter 3.

“ambiguous.” For sources on sacrifices directly to the emperors, Price cited imperial altars as a group, a first century inscription from Naples, a second century Athenian inscription, and a disputed *hapax legomenon* in a fragmentary text from Mytilene.²⁶ References to “sacrifices of the emperors” were then taken to be ambiguous, and assumed to constitute an intentional obfuscation of the relationship between emperors and deities.²⁷

It is important to note first of all that there is quite a bit of evidence from Asia and not cited by Price that equates the gods and the emperors in a sacrificial context. In fact, the vast majority of the evidence does not distinguish gods from emperors. For example, an inscription from Ephesus from the year 88/89 CE records an official letter to L. Mestrius Florus, the Roman proconsul of the province, stating that mysteries and sacrifices “were made to Demeter Karpophoros and Thesmophoros, and to the gods Sebastoi by the initiates in Ephesus every year.”²⁸ Another inscription, dated 102-114 CE, that honors Trajan’s doctor L. Statilius Crito was set up in Ephesus by “the doctors who sacrifice to forefather Asklepios and to the Sebastoi.”²⁹ An example from Eresos is even more explicit. The inscription honors a man who was “priest and highpriest for life of the Sebastoi and of all the other gods and goddesses.”³⁰ These and many other examples show no hesitation in assimilating the emperors to the gods.

The fundamental problem in Price’s analysis of ritual is that sacrifices to the emperor and those on behalf of the emperor were not in tension with each other. They are only in conflict if we presume that imperial sacrifices functioned as a unified system whereby gods and emperors were placed on a single spectrum that defined who was human and who was divine in ontological terms. This question of human nature and divine nature propelled Price’s examination of sacrifice, just as it has dominated the deliberations of most modern

²⁶ Price 1984b, 216-20.

interpreters of imperial cult.³¹ He concluded that the system left the question of the divine nature of the emperor ambiguous, and that it did so for reasons that are understandable in terms of social function. The ambiguity of the system, according to Price, allowed the Greek cities to reconcile themselves to an overwhelming foreign power by describing the power in terms of their own religious traditions.³²

My proposal is that ancient imperial sacrifices should not be understood as a way of indicating who was divine and who was human. Particular kinds of sacrifice were appropriate in the context of particular relationships. It was appropriate for the inhabitants to sacrifice to the emperors because the emperors functioned like gods in relationship to them. It was also correct for inhabitants of the empire to sacrifice to the gods on behalf of the emperors because the emperors were not independent of the gods. Put succinctly, sacrifice was not so much a means for expressing divinity as a way of demonstrating and maintaining a variety of relationships. Sacrificing to the emperors and sacrificing to the gods on behalf of the emperors were not contradictory actions. They were two complementary aspects of the larger sacrificial system.

This relational framework for understanding imperial sacrifices is actually supported by Price's last two arguments regarding ambiguity in the imperial cult sacrificial system. The use of εὐσέβεια in relation to the emperors is considered by Price to be a sign of ambiguity since "reverence" could be shown to gods or to humans.³³ By contrast, I have tried to show that reverence for the emperors did not imply a blurring of categories nor the creation of an intermediate status. It described the relationship of Asians to emperors in the language of benefaction that was well-known to the inhabitants of Asia.³⁴ In the context of benefaction, reverence was normally shown to a deity. If reverence was shown toward humans in exceptional circumstances, this only underlines the fact that the decisive question was not divine nature, but rather godlike authority in the context of a specific hierarchical relationship.

³¹ For a recent example, see the persistence of W. Liebeschuetz in his review of *Rituals and Power*, *JRS* 75 (1985) 262-64.

³² Price 1984b, 1, 247-48.

³³ Price 1984b, 232.

³⁴ See above, chapter 2.

The final "ambiguity" mentioned by Price is a reference by Aristides to "a double prayer, one to the gods on the emperor's behalf, the other concerning his personal affairs to the emperor himself."³⁵

The idea of a twofold prayer, to the gods on behalf of the emperor and to the emperor himself, well expresses the ambivalence of the imperial cult.³⁶

The reference to the double prayer, however, comes from an encomium to Roman rule, delivered before the imperial court in Rome, probably in 155 CE.³⁷ It is highly unlikely that Aristides would bring up ambivalent features of imperial cults in this context. On the contrary, this double prayer reveals the reason that the emperors were worshipped, when the prayer is examined in its literary and historical context.

Imperial cults were appropriate because the emperors accomplished the work of the gods in an unparalleled manner. Aristides expressed it in this way.

Indeed, the poets say that before the rule of Zeus everything was filled with faction, uproar, and disorder, but that when Zeus came to rule, everything was put in order and the Titans were banished to the deepest corners of the earth, driven there by him and the gods who aided him. So too, in view of the situation before you [i.e., before Antoninus Pius] and under you, one would suppose that before your empire everything was in confusion, topsy-turvy, and completely disorganized, but that when you took charge, the confusion and faction ceased and there entered in universal order and a glorious light in life and government and the laws came to the fore and the altars of the gods were believed in.³⁸

Aristides then went on to specify how the emperors accomplished the purposes of various deities.

And it seems that the gods, watching from above, in their benevolence join with you in making your empire successful and that they confirm your possession of it. Zeus, because you well care for the inhabited world. . . Hera, because of the marriages which take place under law.

³⁵ Aristides, *Or.* 26.32. Translation from Charles A. Behr, *P. Aelius Aristides: The Complete Works* (Leiden: Brill, 1981) 2:80.

³⁶ Price 1984b, 232.

³⁷ Behr 1981, 2:373 n. 1.

³⁸ *Or.* 26.103, in Behr 1981, 2:96.

Athena and Hephaestus, since the arts are honored. Dionysus and Demeter, because their fruits are not injured. Poseidon, since his sea is cleansed of fighting and he has exchanged merchant vessels for warships."³⁹

Having said this, it is important to note that Aristides clearly indicated that the emperors were humans. In the same oration, he praised Antoninus Pius for excelling all previous human rulers by as much as he surpasses other men.⁴⁰ But this was not a problem in Aristides's perspective because the cults of the emperors were not a question of divine ontology. Rather, they were a sign that the emperors functioned like gods in the organization of social life.

Thus, the double prayer—to the emperor and to the gods *on behalf of* the emperor—does not reveal a deep-seated ambivalence at the heart of imperial cults. Rather, the twofold prayer accurately reflected imperial theology: the gods looked after the emperors, who in turn looked after the concerns of the gods on earth to the benefit of humanity. Imperial authority ordered human society, and divine authority protected the emperors. This is why the prayer to the emperors was a petition regarding various personal affairs, and the prayer to the gods was simply for the continued well-being of the emperors.

If we ask whether imperial cults envisioned a divine or human emperor, we have already framed the question inappropriately. Questions of ontological status were not unknown in the Roman world,⁴¹ but they were relatively unimportant in imperial cultic contexts. The crucial issue was the role of imperial authority in creating the kind of society which pleased the gods.

Neokoros

The concern for establishing society in accord with the will of the gods was the fundamental similarity between cults for rulers and Olympian cults, and it is evident long before the Roman imperial period. The distinctive feature of cults for rulers in western Asia

³⁹ Or. 26.104-05 in Behr 1981, 2:96. Aristides went on to mention also Apollo, Artemis, the Muses, Hermes, Aphrodite, Asklepios, the Egyptian gods, Ares, and Helios.

⁴⁰ Or. 26.107

⁴¹ See for example Cicero's discussion of the relative status of various supernatural beings in *de Natura Deorum*.

Minor during the Hellenistic and Roman periods was the particular kind of grace which the cities and region received, or hoped to receive, from a θεός. In the cult established by the cities of western Asia Minor for Antiochos I and his family in the mid-third century BCE, a direct connection was made between the province's cult and the ruler's role as protector of the rights of the cities.

[παρακαλείτω]σαν δὲ οἱ πρέσβεις τὸν βασι-
[λεία Ἀντίοχον πᾶσαν ἐπιμ]έλειαν ποιῆσθαι τῶν πόλε-
[ων τῶν Ἰάδων ὅπως ἂν τὸ λοιπὸν ἐλεύθεραι οὔσαι καὶ δημο-
[κρατούμεναι βεβαίως ἤδη πολλοὶ]τεύωνται κατὰ τοὺς πατρί-
[ους νόμους. . .] κτλ.⁴²

The emissaries will request of King Antiochos that all care be taken for the cities of Iados⁴³ so that henceforth they, being free and firmly democratic, will now be constituted in accordance with ancestral laws. . .

In the late Republican period and some 200 years after the cult for Antiochos I, Publius Servilius Isauricus was given cultic honors as a result of his two years as proconsul of Asia (46-44 BCE) in almost exactly the same terms.

Ὁ δῆμος ἐτίμησεν
Πόπλιον Σερούλιον Ποπλίου υἱὸν Ἰσαυρι-
κὸν τὸν ἀνθύπατον γεγονότα σωτῆρα καὶ
εὐεργέτην τῆς πόλεως καὶ ἀποδεδωκότα τῇ
πόλει τοὺς πατρίους νόμους καὶ τὴν δημοκ[ρα-]
τίαν ἀδούλωτον.⁴⁴

The demos honored Publius Servilius Isauricus, son of Publius, who was proconsul, saviour, benefactor of the city, and the one who gave back to the city the ancestral laws and unrestricted democracy.

At the inauguration of the Temple of the Sebastoi approximately 130 years after Isauricus's proconsulship, Aphrodisias and Stratonikeia called themselves "free and autonomous from the beginning by the grace of the Sebastoi" (ἐλεύθερος ὢν καὶ αὐτόνομος ἀπ' ἀρχῆς τῇ τῶν Σεβαστῶν χάριτι).⁴⁵ While developments in cults for

⁴⁴ *IGR* 4.433 (Pergamum). *IGR* 4.434 is an inscription that honors his daughter Servilia in similar, although less expansive, terms.

⁴⁵ *IvE* 2.233; 237.

rulers certainly occurred during the course of over three centuries, one theme persisted in the public rhetoric of ruler cult: the preservation of the cities' ancient rights and traditions.⁴⁶

This conclusion is similar to Price's argument that imperial cult was a means by which the Greek cities integrated foreign Roman power into their traditions of independence. Because Price assumes that the structures of the Greek cities remained relatively uniform throughout this period, he sees imperial cult as a continuous attempt to reconcile traditions of autonomy with foreign power. The inscriptions above suggest, however, that the reconciliation of the Greek cities to foreign authority occurred fairly early in the Hellenistic period. Ruler cults quickly became an established facet of Greek urban life. The changes in ruler cults over the succeeding centuries were not new negotiations between authority and autonomy, but rather modifications of an established institution resulting from developments in the exercise of authority. The Cult of the Sebastoi is therefore an important witness to the changing nature of imperial authority in the late first century, and not a sign of a new struggle to explain the loss of independence.

Some of the developments in the pattern of social relationships in late first century Asia can be observed in the special features of the Cult of the Sebastoi. First of all, the cult signals the growing importance of the province as the fundamental unit of the empire. Even though the rhetoric of the free city was employed in the Cult of the Sebastoi, the cities of western Asia Minor were becoming increasingly interdependent through transportation and commerce. Social networks were becoming regional, and cultic life needed to reflect this situation.

By the time Aristides delivered his encomium to Rome in the mid-second century CE, he could describe the shift from urban institutions to regional ones as the signal achievement of the Romans. They had not simply gained a large empire for themselves, but had also surpassed all former democracies by including the whole world in their government, either as citizens or as those who are governed.⁴⁷ Rome had brought the nations together; the inhabited

⁴⁶ This same theme is suggested in the fragmentary text of *IoE* 2.449. This municipal decree is probably from the Domitianic period, and it draws a logical connection between the restoration of ancient buildings in the city and the greatness of the new Sebastaeion.

⁴⁷ *Or.* 26.58-61.

world had become like one city.⁴⁸ The empire is thus represented by the metaphor of the "city."

The Cult of the Sebastoi did not simply respond to this process of regionalization, but also contributed to it and shaped it. As a result of the establishment of the cult, the *koinon*'s responsibilities were increased, the number of people involved in provincial highpriesthoods grew, and interurban networks of personal contact and of official responsibility extended beyond their former boundaries.

The appearance of Asiarchs in the archaeological record at the end of the first century CE was probably a separate manifestation of these same processes. The Asiarchate was not directly connected to the provincial imperial cult, but the reinvigoration, or even redefinition, of the office in the eighties of the first century CE gave provincial status to those who undertook certain municipal *leitourgiai*. In this way, the tradition of voluntary municipal service became a part of the growth of provincial institutions. This creation of provincial institutions did not replace the cities; rather, the Greek cities were being subsumed into new, larger social networks. Municipal service was placed in a provincial context.

Even though regional institutions were expanding, the Cult of the Sebastoi was still an exceptional innovation involving multiple provincial cults within a single province. Tiberius's grant to Asia of a second provincial cult in 23 CE became a problem for him. After three years of intercity dissension and an appeal to the Senate, Smyrna was awarded the honor of providing the location for the province's temple. Certain senatorial factions thought that Tiberius's grant had been inappropriate and their opposition to such cults was sufficient for the emperor to make it a policy not to grant further provincial cults for himself. The provincial cult of Caligula in Miletus from around the year 40 CE was started but soon abandoned when the emperor was assassinated. Outside of Asia, there is no known example of a second provincial cult before the second century CE, and some provinces do not seem to have had any provincial cults at all. The third provincial cult of Asia under Domitian was an unprecedented attempt to build a network, rather than a center, of provincial worship.

One reason that a third provincial cult was needed in Asia was the

⁴⁸ *Or.* 26.36.

change that had occurred in the relationship of the province with Rome. A new dynasty had consolidated its power since the turmoil of the year 68/69 CE. Since both of the earlier provincial cults were for emperors of the Julio-Claudian line, the advent of Domitian to power as the third Flavian to rule the empire emphasized a weakness in the cultic life of Asia. The new cult thus functioned at one level to provide the reverence that was appropriate for the new ruling family.

Another innovative aspect of the Cult of the Sebastoi was the use of the concept “neokoros.” In municipal imperial cults, emperors and their families could be referred to as divine or as specific deities, but in the provincial cults such identifications were much less frequent, being reserved mostly for deified emperors. The neokoros imagery hinted at such an identification, but to understand it merely as a veiled reference to deity is to miss the salient point. The appellation “neokoros” for the city was not so much concerned with an emperor’s alleged divine status; rather, it addressed the question of the relationship between emperor, province, and city. Through the neokoros imagery that was adopted from the cult of Ephesian Artemis for the Cult of the Sebastoi, Ephesus proclaimed its unique status within the province as the caretaker of the cult that was offered by all the cities of the province. Here again, the metaphors of empire are drawn from municipal life.

There is evidence that other cities in Asia were not pleased with the Ephesian initiative in this particular instance. Thus, the free cities made an official response to Ephesus in the formula for the temple inscriptions displayed on statue bases in the Temple of the Sebastoi precincts.⁴⁹ The free cities emphasized that their own status was a direct benefit to them by the grace of the emperor, and then, while affirming the neokorate status of Ephesus, portrayed themselves as the benefactors of Ephesus through the use of the εὐσέβεια/εὐνοία vocabulary. In this way, the other free cities of Asia tried to use the imagery of the neokoros to define their status as higher than that of their capital, by virtue of the fact that they had bestowed the province’s cult on the city of Ephesus.

Cities that were not free and autonomous would have assessed the situation in other ways, and at least one testimony to a different

⁴⁹ *IvE* 2.233; 237. See above, p. 32-33, for text and translation of the former.

viewpoint has been preserved. An inscription set up in Ephesus by the city of Philadelphia used the neokorate symbol for its own purposes.

	[τ]ὸν νεω[κό]ρον
2	καὶ φιλοσέβαστον
	καὶ κοσμοῦντα τὴν Ἀσίαν
4	Ἐφεσίων δῆμον ἐτείμησεν
	ὁ Φλαουίων Φιλαδελφέων
6	δῆμος διὰ τε τὴν εἰς τοὺς
	Σεβαστοὺς εὐσέβειαν καὶ
8	τὴν πρὸς αὐτοὺς συγγένειαν
	καὶ ἐκ προγόνων φιλίαν
	[vacat]
10	ποιησαμένου τὴν ἐπιμέ-
	λειαν Τ. Φλ. Ἑρμογένους
12	υἱοῦ. Κυρίνα. Πραξέου
	τοῦ πρώτου. ἄρχοντος. ⁵⁰

The demos of the Flavian Philadelphians honored the neokorate demos of the Ephesians that is devoted to Sebastos and adorns Asia, because of piety toward the Sebastoi, and (because of) kinship to them and ancestral affection. Supervised by the first archon T(itus) Fl(avius) Quirina Praxeos, son of Hermogenes.

In this inscription, found on a base that once held a statue of Ephesus personified, the Philadelphians could not claim free status by the grace of the emperors. They adopted instead the epithet "Flavian"⁵¹ and mentioned their reverence for the emperor, using the same phrase found in the temple inscriptions.⁵² They did not, however, cast themselves as benefactors of Ephesus but rather emphasized their mythological kinship with the Ephesians. Thus, the inscription was used to raise Philadelphia above the other cities in its class, although not quite up to the level of Ephesus or the other free cities. This was accomplished by adopting the pattern of the ter-

⁵⁰ *IvE* 2.236.

⁵¹ Under Caligula, the Philadelphians called themselves "Neocaesareia" on their coins; *OCD* 813.

⁵² It could be argued that the inscription refers to the reverence of Ephesus in l. 5-6 rather than to the reverence of the Philadelphians, but this would not be the most likely reading. The demos of the Philadelphians is both the subject of the sentence and closer in proximity to the prepositional phrase in l. 5-6. All three nouns dependent on the preposition διὰ refer to the Philadelphians and serve as a stylistic counterweight to the three phrases in l. 1-3 that describe the demos of the Ephesians.

minology in the free city inscriptions to the extent that this was permissible, and by describing the Philadelphians as relatives of the Ephesians. The position of Ephesus was not lowered in any way, but rather praised through text and sculpture.

After these initial disagreements between the cities about the precise meaning of the neokoros image, it soon became a standard symbol for the relationships of the cities of the province to each other as well as to the emperor. In fact, this innovation—the use of “neokoros” in a provincial imperial cult context—was the most enduring and influential facet of the Cult of the Sebastoi. It proved to be a very successful experiment.

Grace

In the province of Asia, the economic and cultural position of Ephesus had changed in significant ways, and the establishment of the Cult of the Sebastoi reflected some of these changes. The most important of these was the fact that Ephesus over time had come to function as the *de facto* capital of the province of Asia. Pergamene primacy in western Anatolia had continued after the Romans inherited the area in 133 BCE, for the establishment of the Roman province of Asia (126 BCE) left Pergamum as the leading city of the area. It was not until Augustus reorganized the province in 29 BCE that Ephesus became its administrative center. Augustus, however, authorized the establishment of the empire’s first provincial cult in Pergamum as a way of claiming continuity with the past. Pergamum had been the center of Attalid rule and of Roman rule during the Republican period. A provincial cult founded anywhere else except Pergamum in 29 BCE would not have helped consolidate the authority of Augustus in Asia.

Over the next century, Ephesus’s leading position became evident as economic, governmental, and cultural activity increasingly gravitated toward that city rather than toward the other large cities of the province.⁵³ There was, however, an important facet of Ephesus’s status as the capital of Asia that was still missing: her position in the province and the empire had not been sanctified by a provincial cult. Prior to about 85 CE, the chances for establishing such a cult in the city seemed slight, for Asia already was unique

⁵³ D. Knibbe 1980, 750-52, 759.

among the provinces in possessing two provincial cults. Around 85 CE, however, the Cult of the Sebastoi in Ephesus was approved as a confirmation and enhancement of the relationship that existed between the city and the imperial center. It provided the appropriate ritual context by which Ephesus could express reverence for the emperor, and affirmed the city's preeminence in the province through powerful symbolic language.

The emperor's favor was not directed just toward Ephesus, though. Domitian's general policies toward the provinces made it especially fitting that he be honored with this new provincial cult. Even a hostile witness like Suetonius commented on Domitian's concern for honesty and justice in the administration of the provinces.⁵⁴ Domitian opposed certain corrupt Roman governors and began to reform Asia's tax system, slowly replacing the *publicani* with equestrians to oversee collections.⁵⁵ When he needed more revenue in the early nineties, Domitian seems to have refused to raise the extra money through increased provincial taxation.⁵⁶ In the city of Rome, wealthy citizens from the eastern provinces were entering the upper echelons of the senatorial class, with the Asian Tiberius Julius Celsus Polemaianos becoming the first citizen from an eastern province and not of Italian descent to serve as consul (92 CE).⁵⁷

It seems, then, that the province of Asia fared better under the Flavians, and especially under Domitian, than it had under their predecessors. Pleket argued that several of Domitian's decisions benefitted not just the provincial elite of Asia and the nearby provinces, but also the general populace. According to Pleket, this was not caused by Domitian's desire to help the lower classes but proceeded from his concern for the welfare of the provinces in general.⁵⁸

⁵⁸ Pleket 1961, 301-9.

It is not sufficient, however, to attribute one opinion to all the inhabitants of Asia, for some would have been helped and others hurt by the developments during the reign of Domitian. Domitian's attempts to reduce the number of abusive Roman officials in the provinces probably appealed to the general populace of the provinces, but the longterm benefit would have been for other competing groups within the provincial elite. For when Domitian moved against corrupt Roman officials, it also affected their provincial allies. Thus, one would expect that this was a time when some of the leaders within the province were discredited and some others were ascendant.

In this context, then, the establishment of the new Cult of the Sebastoi was a mixed blessing for the provincial elite. It offered many advantages for them, such as new opportunities for involvement in sacred activities and a more comprehensive cultic system. There was also increased political influence, as well as control of new financial operations. The new cult occasioned certain problems for some of them, though, for the new activities created new economic demands. Furthermore, the expansion of civic and provincial offices presented new avenues for competition that made the position of some individuals within the social hierarchy more vulnerable than before. Finally, there was the possibility that the recipient of cultic honors might be dethroned, creating difficulties for those most closely connected to the cult. This problem affected Miletus in 41 CE, and threatened Ephesus in 96 CE.

Reverence

One significant expression of reverence for the emperors was the remodeling of the city of Ephesus. The changes in the city's physical image affected both the lower area by the harbor as well as the region near the upper agora. The harbor area became the site for a large Hellenistic complex that combined Roman baths with the quintessential feature of the Greek city, the gymnasium. While gymnasia were by no means a rarity in the first century CE, the Harbor gymnasium stands out in two ways: its size and its design. The amount of land occupied by the Harbor gymnasium was such that it dwarfed all other buildings in the area. The design of the Harbor gymnasium was even more dramatic than its size. Gymnasia of the late Republican and early Imperial period tended to include rooms and assume

the character of what might technically be called a "palaestra," i.e., a porticoed courtyard for exercise with adjacent rooms for various purposes (lectures, bathing, sacrifice, etc.). The Harbor gymnasium, however, did not follow current fashions. It harkened back to a model in which there was only a courtyard surrounded by porticoes. The distinctiveness of the building was emphasized by placing it right next to a palaestra that reflected more recent architectural trends.

Why a gymnasium? The Harbor gymnasium involved the city with an older urban ideal in which such a building, where physical and philosophical training were inseparable, functioned as a center of municipal cultural life. The decreased size of other gymnasia of the first century CE and their proximity to bath buildings show that the Harbor gymnasium was an anachronism when it was built, for Roman fashion deemphasized physical exercise but encouraged bathing. Roman baths were one facet of urban life, not the municipal center for physical and aesthetic education.⁵⁹ By means of its architectural design, the Harbor gymnasium embodied its builders' vision for the future of Ephesus. The capital of Asia was to be a Greek city in the Hellenistic tradition that was also loyal to the Roman emperors.

The remaking of the visual image of Ephesus was not confined to the harbor area. The Temple of the Sebastoi, with its terraced precincts and pseudodipteral floorplan, appealed to the same Hellenistic fashions that inspired the design of the Harbor Bath-Gymnasium complex. Together, the designs of the two building projects related to the Cult of the Sebastoi tried to remodel Ephesus not in the image of Rome or Italy, but in accordance with Greek traditions of western Asia Minor. Roman elements, such as hot water bathing, were incorporated into the plan, for both cultures had already assimilated many features from the institutions of the other. The overall effect of these building projects, however, was an affirmation of the local Hellenistic heritage and an optimistic assessment of the possibilities for maintaining this heritage in a world ruled by Rome.

Some information has been preserved about the individuals involved in these projects. While the nature of our sources does not

⁵⁹ Fikret Kutlu Yegül, "The Bath-Gymnasium Complex in Asia Minor during the Imperial Roman Age," (Ph.D. diss., Harvard University, 1975) 218-21.

allow a systematic analysis of the developments among the elite of the province of Asia in the late first century CE, there are suggestions in the epigraphic record that some individuals were indeed becoming more influential at the time of, and perhaps because of, their involvement in the provincial Cult of the Sebastoi.

Three men of the province who appear in the temple inscriptions as early highpriests of the Cult of the Sebastoi are illustrative of the developments that were taking place. One of the three, Tiberius Julius Dama Claudianus, is impossible to trace because his name does not appear in any other extant source. His name reveals that he was a Roman citizen, and it is probable that he or earlier members of his family became citizens during the Julio-Claudian period.

Another of the three, Tiberius Claudius Aristio, appears in most of the temple inscriptions, and is known from many other Ephesian inscriptions. His first datable appearances in the epigraphic record, however, are in these temple inscriptions. After this, his name is associated with nearly every major civic office in Ephesus. His wife Julia Lydia Laterane was also active in civic life and she probably held a prominent municipal highpriesthood at some time before 114 CE.⁶⁰

Aristio's numerous benefactions and services to the region made him well-known, both to friends and opponents, throughout the province and beyond. Thus, it is no wonder that Pliny the Younger called Aristio the leading citizen of Ephesus, nor is it surprising that Pliny's reference to him was occasioned by Aristio's appearance as a defendant on trial before Trajan, accused by fellow Asians of an unspecified crime.⁶¹ Aristio was acquitted and continued to play a major role in Ephesian municipal affairs into the second quarter of the second century CE.

The third highpriest from the inscriptions associated with the Temple of the Sebastoi was Tiberius Claudius Pheseinos. Pheseinos appears in five of the inscriptions from the Temple of the Sebastoi but nowhere else in the Ephesian inscriptions. The reason for this is that he seems to have been from Teos, where inscriptions have been found that mention him and his father.⁶² Another inscription

⁶⁰ *IvE* 2.424, 424a.

⁶¹ Pliny, *Ep.* 6.31.

⁶² *IvE* 2.232 notes.

from Teos informs us that his daughter Claudia Tryphaina and his wife Stratonike both served as provincial highpriestesses of Asia.⁶³ Even though Pheseinos was not a native of Ephesus, he was influential enough to be appointed by the koinon to serve as the provincial highpriest for the dedication of the Temple of the Sebastoi.

These three men demonstrate some of the social developments in Asia at the time of the new provincial cult established in Ephesus. All three were wealthy members of the provincial elite whose Roman citizenship was probably attained in the early Imperial period. All three are known to us as holding provincial offices for the first time in the inscriptions of the Temple of the Sebastoi. They were members of families that were active in public life, for two of the three are known to have been married to women who held important highpriesthoods, and to have had other relatives who were prominent in public life.⁶⁴

The highpriest who is the best known to us of the three, the Ephesian Aristio, was also the most actively involved in the inauguration of the Cult of the Sebastoi. Members of the elite from outside of Ephesus were not excluded from important responsibilities, though, since appointment to the highpriesthood was within the jurisdiction of the provincial koinon and did not depend upon Ephesian institutions. The determining factor in such an appointment was one's standing within the social network of the provincial elite.

There were also occasions for meritorious service in the Cult of the Sebastoi that depended primarily upon an individual's municipal standing. Ephesus had the most to offer in this respect, for the city could appoint an agonothete to sponsor the Ephesian Olympics and probably determined the neokoros of the temple. Cities outside of Ephesus could offer positions in the koinon, commission embassies to provincial cult festivals, and provide opportunities to underwrite dedications, such as the temple inscriptions set up in Ephesus by other cities.⁶⁵

⁶³ *IGR* 4.1571 (Teos).

⁶⁴ For Aristio the younger, see *FiE* 5, 1.65-66

⁶⁵ Ten of the thirteen known inscriptions for the inauguration of the Temple of the Sebastoi mentioned prominent citizens of the respective donor cities who facilitated these dedications. The inscription from Philadelphia honoring Ephesus that was discussed above (p. 209-211) also recorded such a benefactor. Among all these men, only the Philadelphian is known from other sources (see R. Münsterberg, *Die*

It should be noted that all of the people clearly associated with the inauguration of the Cult of the Sebastoi are men. Vedia Marcia, daughter of Publius Veditus, was a provincial highpriestess (probably in Ephesus because of her family's prominence there) before the end of the first century. Flavia Ammion Aristio was certainly a provincial highpriestess in Ephesus, but her office cannot be dated more precisely than before 130 CE. The resulting pattern of participation according to gender is that men held most of the offices connected with the cult; women also held some offices after the initial phase but their numbers never matched those of the male officials.

What of the rest of the society? How did the Cult of the Sebastoi affect those inhabitants of Asia who did not have the wealth or prestige to hold significant offices in the cult? We have little evidence that speaks to this issue. Only the elite had their names and careers inscribed in stone, or their tastes enshrined in public monuments that can be excavated for examination some 2000 years later. We can be certain that the opinions of the general populace of Ephesus and of Asia were no more uniform than were those of the provincial elite. The voices silenced by historical circumstance certainly articulated a variety of religious, ethnic, political, and economic perspectives.

If there is little direct evidence for the affect of the Cult of the Sebastoi on the general populace, a few broad inferences can nevertheless be drawn. There were many aspects of the cult that would have appealed to many inhabitants of the region. The cult symbolized significant facets of life in Roman Asia in the late first century CE: the benefits of imperial authority, gratitude toward and dependence upon the emperors, the ordering of the cities of the province, and the role of the elite in the mediation of imperial influence. The Cult of the Sebastoi likewise provided regular opportunities for entertainment, travel, social intercourse, and extra economic activity. Finally, this particular provincial cult affirmed local religious traditions and the larger heritage of the Greek world as a mode of life in the period of Roman supremacy.

Which members of the general populace might have objected to the Cult of the Sebastoi? There are few, if any, signs of opposition to Roman rule in Asia by the late first century CE. By the beginning

of Domitian's reign, Rome had controlled the area for over 150 years and the disturbances noted by Roman writers appear to be nothing more than the kinds of local disputes one would expect in a complex urban setting.⁶⁶ In any event, there was no need to station Roman legions in the area.⁶⁷

The construction of the Temple of the Sebastoi and of the Harbor Bath-Gymnasium would have involved the displacement of some Ephesians and could have aroused some opposition. Also, certain individuals with significant commitments to the cult of Ephesian Artemis may have suspected that reverence toward her would be eclipsed by the new imperial neokorate responsibilities of Ephesus. Neither of these factors appears in any of our sources, though.

At least some Christians in Ephesus, and in Asia in general, would have had reasons to object and several scholars have suggested that imperial cult in general or even the Cult of the Sebastoi in particular was the catalyst for the production of the Book of Revelation.⁶⁸ There is often a tendency to make Domitian the focus of this opposition. For this reason, one theme from the literature on Revelation and the Cult of the Sebastoi should be discussed by way of conclusion, namely, the role of Domitian and other emperors.

Domitian, the Emperors, and the Cult of the Sebastoi

The unfavorable portrait of Domitian that we have inherited from the ancient Roman historians has often influenced the interpretation both of Rev and of the Cult of the Sebastoi. But the attempt to see in this cult the delusions of a mad emperor does not conform to the available data. This analysis of the Cult of the Sebastoi that was established in Ephesus in the mid-eighties of the first century CE has

⁶⁶ For a summary discussion, see Leonard L. Thompson, *The Book of Revelation: Apocalypse and Empire* (New York: Oxford University Press, 1990) 154-56.

⁶⁷ There is only evidence for one cohort in Asia at any given time. M. Speidel, *Roman Army Studies* (Amsterdam: J.C. Gieben, 1984) 1:278-79.

⁶⁸ E.g., Elisabeth Schüssler Fiorenza, *The Book of Revelation: Justice and Judgment* (Philadelphia: Fortress, 1985) 192-99; Price 1984, 197-98; Helmut Koester, *Introduction to the New Testament* (Philadelphia: Fortress, 1982) 2.250-51; G.R. Beasley-Murray, *The Book of Revelation* (London: Oliphants, 1974) 217; Ethelbert Stauffer, *Christ and the Caesars. Historical Sketches* (London: SCM, 1955) 147-91; R.H. Charles, *A Critical and Exegetical Commentary on the Revelation of St. John* (International Critical Commentary; Edinburgh: T. & T. Clark, 1920) 1:351. The issue of the relationship of imperial cults to Rev is too complicated to be addressed in this context. It is a question to which I hope to return in a separate study.

uncovered little evidence for the conclusion that the cult was initiated by the emperor or even greatly influenced by him in a direct fashion. Aspects of the provincial cult which were subject to Roman supervision, such as the exact name of the temple that avoided the use of θεός for the emperor, were actually the most reserved. Conversely, the aspects of the cult that were the responsibility of the city, such as coin design, architecture, and athletic games, were the most daring. It cannot be argued that the Cult of the Sebastoi was a foreign import, foisted upon the province of Asia by a tyrant seeking divine glory. The Cult of the Sebastoi depended very little upon an individual emperor for its vitality. Rather, the cult was an integral part of developments in Ephesus and in the province of Asia.

The remains of the Cult of the Sebastoi indicate that the cult belonged specifically to the category of the worship of Olympian deities.⁶⁹ The games and their mythology, the buildings, the sculpture, and even the coin images all point in this direction. Olympian "religion" was not primarily concerned with emotional sincerity, assent to doctrines, or divine essence;⁷⁰ rather, it dealt with temples, sacrifice, priesthoods, games, χάρις ("grace"), and εὐσέβεια ("reverence"). The issue of whether a given figure was divine mattered little; at issue was the establishment of proper hierarchies, the maintenance of relationships, the preservation of ancestral ways.

Olympian religion provided a useful, perhaps even necessary, model for the imperial cult. The Olympian pantheon expressed the supremacy of the emperor (Zeus) and provided an analogy for the importance of the imperial family. It also underlined the fundamental social function shared by the Olympians and the emperors.

As highpriests and highpriestesses in this system, the provincial elite of Asia affirmed and promoted its role as the mediators between the province and the imperial center. Grace flowed to the province, and reverence was given to the emperor. The democratic ideals of the Greek cities were affirmed even as those cities were being incorporated into the growing imperial system. In this way, contemporary developments in the ordering of social life of Asia were integrated with Greek civic traditions.

⁶⁹ Price 1984b, 233.

⁷⁰ For an example of such a definition of ancient religion, see Ramsay MacMullen, *Paganism in the Roman Empire* (New Haven: Yale University Press, 1981) esp. 65-66, 131-37.

Augustus was ambivalent toward the use of the Olympian model for the living emperor, preferring to link his cult to that of Rome for the Greeks and to maintain the cult of Divus Julius for Romans. Tiberius seems to have avoided Olympian honors as much as possible. Gaius, on the other hand, accepted such worship with a fervor that was unacceptable to his contemporaries.

The Cult of the Sebastoi in Ephesus represented a step back from the radical position of Gaius. But in contrast to the cult of Rome and Augustus in Pergamum or the Cult of Tiberius, Livia, and the Senate in Smyrna, the imperial family appeared alone as the object of the province's worship without reference to other centers of Roman power. As such, the cult served as a prototype for the fully developed cults of Hadrian Zeus Olympios in Greece and Asia that sprang up in the second quarter of the second century CE.

When the Senate voted to have Domitian's name removed from the public record, the Cult of the Sebastoi established for his family survived and flourished without him. The cult was too firmly anchored in the life of the province to fall with Domitian. In fact, it seems that the Cult of the Sebastoi set a precedent for other provincial imperial cults. The unparalleled proliferation of provincial imperial cults that took place in Asia under the Antonines included these three aspects found in the Cult of the Sebastoi—the use of Olympian religious traditions, multiple provincial cults, and neokoros imagery—and extended their influence throughout the province and beyond.

The popularity of the Ephesian model was no coincidence. The Cult of the Sebastoi was an accurate assessment of crucial developments in late first century Asian life. The earlier provincial cults that expressed reverence for the emperor and Rome, or for the emperor and the Senate, no longer served as viable models. Henceforth, the emperors would be the primary source of divine grace for the cities. In the provincial Cult of the Sebastoi, the new metaphor for this relationship emerged. It was based on neokoros imagery drawn from the city's relationship with its primary deity, Ephesian Artemis. But the city quickly shifted its focus from the status of being twice neokoros (of Artemis and of the Sebastoi) to the honor of being neokoros of the emperors. The recontextualized municipal religious tradition took on a life of its own in the provincial cults of the emperors. The mediators in this new relationship were the members of

the elite who moved from their municipal base into the arena of provincial service. This became the mechanism by which the Ephesians, and others, fulfilled their responsibilities to the Sebastoi and to the other gods and goddesses.⁷¹

⁷¹ See *IGR* 4.18 (Eresos).

APPENDIX I

PROVINCIAL HIGHPRIESTS, PROVINCIAL HIGHPRIESTESSES, AND ASIARCHS

The goal of this collection is to provide greater access to the archaeological evidence for provincial highpriests, provincial highpriestesses, and Asiarchs. Since the tables summarize a great deal of information they should be used as a guide to, rather than as a substitute for, consultation of the relevant publications.

I have organized the materials into six columns which are described below. The arrangement of the data reflects my interests and facilitates certain kinds of inquiry. The primary organizing principle is a threefold division: references to highpriests, highpriestesses, and Asiarchs. Each group of attestations is given in a separate section of this appendix so that each kind of title can be examined independently. Within each of the three sections, the overall arrangement is in rough (not exact) chronological order. The principles of arrangement in the description of the Date column (below) should be read carefully. Along with dates of attestations, the columns also allow easy reference to exact titles, names of officials, origins of data, media, and publication.

In order to render the information as succinctly as possible, I have used the following conventions.

- [] a lacuna in the text, calculated to reflect the amount lost in the original language.
- ? probable but not certain.
- ??? missing information.
- * estimated date of office assuming 30-year generations in a family.
- In. inscription.
- Cn. coin.
- k koinon (provincial assembly).

Date. This column is organized primarily according to the date of attestation, i.e., the date of the coin or inscription, and not strictly according to the date of office. Sometimes the data clearly comes from the period of service and in most cases one can assume that the date of office was not much earlier than the attestation. Occasionally, reference is made to ancestors who held a particular office

much earlier. When possible, I have estimated the date of service for these people assuming that an average generation lasted 30 years. These cases are listed according to the estimated date of office and marked with an asterisk. The date of attestation is then listed in parentheses in the column giving publication information.

Some of the materials on the three kinds of titles can be dated with precision, many can be dated within a period of several years, and others cannot be dated with any useful specification. Dates which are rounded off to decades (e.g., 120) are normally accurate within about 5 years. Mid-century is indicated by 40-60, 140-160, etc. 100-150 or 50-100 is my way of noting a half-century. A blank after a dash (130-) signals that the terminus ad quem is unknown.

Using this system, I have arranged each attestation by its earliest possible date as one means of illuminating patterns in historical developments. It is important to remember that an element of uncertainty remains. The ranges of possible dates means that a given attestation may actually have been earlier than one listed earlier in this appendix, and this fact should be noted in any attempt to make judgments of chronology based on this collection. Moreover, attestations whose date is completely uncertain are listed at the end of each section since their vocabulary and style usually suggest a later rather than earlier date.

Title of office. I have translated the titles into English as accurately as possible, occasionally sacrificing good style to reflect the original word order. The goal is to inform the discussions of the various specific titles.

Name of official. Full names of officials are included in this column. Some abbreviations of names have been introduced in the appendix to compress the data. These do not necessarily reflect the abbreviations in the inscriptions or coins. I have also tried to include information about relatives in order to clarify family relationships. The relatives are sometimes, but not always, listed in a given inscription or coin. In the few case where unnamed ancestors are described as holding highpriesthoods, I have assumed that these might be male or female ancestors. These unnamed officials are included both in the sections on highpriests and those on highpriestesses.

I have found no perfect system for rendering names in English. In general, Greek names are transliterated from Greek and Latin names from Latin. Many exceptions were made, however, in cases where modern academic tradition uses some other form of the name.

Findspot of data. This column indicates where the materials were found, not where the official served.

Medium. The materials in this appendix come from inscriptions and coins. Coins or inscriptions of the koinon are marked with the letter k, since this sometimes affects the conclusion of whether an office was provincial or local. The scattered references to the three offices in literary sources have not been included because they are discussed in chapter 4.

Publication. When an inscription or coin has been published in more than one place, I have only included the latest publication or the one which appears to me to be most accurate. When evidence is arranged according to date of office rather than to date of attestation, the date of attestation is given in this column in parentheses after the publication information (see above “Date”). Occasional cross-references and comments are also included in this column.

I have made every effort to insure the accurate and exhaustive nature of this collection. It includes materials available in publications until about 1990. I welcome any corrections, or any suggestions on additional material that might have been overlooked or that came to light at a later time.

APPENDIX II

DATES OF THE ASIARCHS FROM A FAMILY OF CIBYRA

Rosalinde Kearsley presented arguments in “A Leading Family of Cibyra and some Asiarchs of the First Century,”¹ that one family with several generations of Asiarchs could be traced back so that at least one Asiarch could be dated to the late first century BCE. Her conclusion, however, is not correct.

Members of the family from Cibyra are mentioned in several inscriptions from that city (*IGR* 4.883, 906-10, 912) so that the order of the generations can be reconstructed. On the basis of *IGR* 4.908, Kearsley proposed a dating of the family that was earlier than that of Halfmann.² *IGR* 4.908 honors Ti. Cl. Celsus Orestianus and his wife Flavia Lycia, who held provincial highpriesthoods in Pergamum. The crucial phrase is in l. 7-9: ἀρχιερατεύσαντας τῆς Ἀσίας τῶν ἐν τῇ πρώτῃ καὶ δις νεοκόρῳ Περγάμῳ ναῶν. Kearsley took this phrase to mean “who held highpriesthoods of Asia of the temples in once and twice neokorate Pergamum;” i.e., one held a highpriesthood when Pergamum had one provincial cult and one held a highpriesthood when the city had two such cults. If this were true, it would provide a firm date around 114 CE (when the second provincial cult was established) for the last members of the family; then generations could be calculated back into the first century BCE at approximately 30-year intervals.

This reading of the highpriesthoods phrase is awkward because it requires one plural participle to refer to two highpriesthoods by two different people that are allegedly distinguished by the number of cults in the city at the times of service. More importantly, such a translation of the phrase would be unparalleled in the hundreds of inscriptions naming provincial highpriests and highpriestesses. The normal practice in such an inscription is to use as much praise for

¹ *AnSt* 38 (1988) 43-51.

² Helmut Halfmann, *Die Senatoren aus dem östlichen Teil des Imperium Romanum bis zum Ende des 2. Jahrhunderts n. Chr.* (Hypomnemata 58; Göttingen: Vandenhoeck & Ruprecht, 1979) 149-51 #61.

the city and the honorand as possible. If a city has two provincial cults, an inscription does not remind the reader that the city once had only one such cult.

The inscription does not refer to Pergamum's first and second neokorate periods. Rather, it uses the city's standard titulature (see above, p. 58) that appears in inscriptions such as *IGR* 4.331 and 4.1688 as a development of Pergamum's claim to be the first city to have a provincial cult of the emperors (see *IGR* 4.456, 470 from the first neokorate period). The phrase does not call Pergamum "once and twice neokorate." It should be translated: "who held high-priesthoods of Asia of the temples in first and twice neokorate Pergamum;" i.e., in twice neokorate Pergamum which was also the first city of Asia to be honored by a provincial cult. This means that the husband and wife can only be dated to some time during Pergamum's second neokorate period (114-215). Since the language used in the group of inscriptions would fit much better in the late second/early third century CE, Halfmann's dating of Orestianus's father, Polemon, to the period of Marcus Aurelius is to be preferred.

Kearsley objected that Halfmann's dating required the identification of M. Deioterianus the Lyciarch (*IGR* 4.907, 912) with the equestrian and tribune Ti. M. Deioterianus (*IGR* 3.472; 500 col. 3, l. 28-30), even though their titles are different (the former is a Lyciarch and not called an equestrian, nor is he named with military offices). She argued that such omissions would be inexplicable.³ This argument based on the absence of titles is not trustworthy, though. The number and kind of titles listed for an individual could vary according to the nature of the particular inscription, and according to that person's place in that specific inscription. In *IGR* 4.907 (see above, p. 112, n. 177, for the text of the inscription), only Ti. Cl. Polemon, the person honored by the inscription, is described as equestrian; his brother, Ti. Cl. Deioterianus, would have had the same rank but is not listed as equestrian because the dedication was not in his honor. Another example is found in *IGR* 4.912 where their mother is honored as the mother of senators, but the son Polemon is mentioned without any offices or status. This phenomenon is even more clear in two inscriptions from Phokaia: *IGR* 4.1323 honors a certain T. Fl. Hermokrates with a list of offices (imperial, provincial, and municipal) he has held, but he appears as a secondary

³ Kearsley, "Leading Family," 49-50 n. 42

figure without any offices in the parallel inscription honoring his wife (*IGR* 4.1325).

If we take Halfmann's date and put Polemon at 170 CE (in the middle of M. Aurelius's reign), a rough calculation based on 30-year generations puts the earliest Asiarch, Flavius Krateros, around the year 80 of the first century CE, which fits exactly with the body of data we have examined. This Cibyran family confirms the reemergence of the Asiarchate in the first half of Domitian's reign.

Twice Neokoros is a case study of the Cult of the Sebastoi that was established in the city of Ephesus by the province of Asia during the late first century CE. Epigraphic and numismatic data indicate that the Cult of the Sebastoi was dedicated in 89/90 to the Flavian imperial family. The architecture, sculpture, municipal titles, and urban setting of the cult all reflect Asian religious traditions. The image of Ephesus was significantly altered by the use of these traditions in the institutions related to the Cult of the Sebastoi. Within the context of the history of provincial cults in the Roman Empire, the Cult of the Sebastoi became a turning point in the rhetoric of social order. Thus, the Cult of the Sebastoi served as a prototypical manifestation of socio-religious developments during the late first and early second centuries in the Eastern Mediterranean.

Steven J. Friesen, Ph.D. 1990 (Harvard) is a Postdoctoral Fellow at the East-West Center, Institute of Culture and Communication/Program on Cultural Studies, Honolulu, Hawaii. He has published widely in the field of Early Christianity, Greco-Roman religion and New Testament Introduction.
